## Part 1 Pluralization of Geometry: New Foundations and Continuity of Problems

|                                                             |    |
|-------------------------------------------------------------|----|
| <b>The Birth of Non-Euclidean Geometry</b> .....            | 3  |
| <i>by Ch. Houzel</i>                                        |    |
| <b>Riemann's Vision of a New Approach to Geometry</b> ..... | 22 |
| <i>by E. Scholz</i>                                         |    |
| <b>Poincaré and Klein – Groups and Geometries</b> .....     | 35 |
| <i>by J.J. Gray</i>                                         |    |
| <b>Klein, Lie, and the “Erlanger Programm”</b> .....        | 45 |
| <i>by D. E. Rowe</i>                                        |    |
| <b>Apparent Contours from Monge to Todd</b> .....           | 55 |
| <i>by B. Teissier</i>                                       |    |

## Part 2 Historical and Epistemological Aspects of the Connexion Between Physics and Geometry

|                                                                                                                                  |     |
|----------------------------------------------------------------------------------------------------------------------------------|-----|
| <b>L'Espace: Concept Abstrait et/ou Physique ; la Géométrie<br/>Entre Formalisation Mathématique et Étude de la Nature</b> ..... | 65  |
| <i>by L. Boi</i>                                                                                                                 |     |
| <b>“Geometrie und Erfahrung”</b> .....                                                                                           | 91  |
| <i>by F. Balibar</i>                                                                                                             |     |
| <b>The Geometric Challenge of Riemann and Clifford</b> .....                                                                     | 98  |
| <i>by R. Farwell and Ch. Knee</i>                                                                                                |     |
| <b>Poincaré et Enriques : Deux Points de Vue Différents<br/>sur les Relations entre Géométrie, Mécanique et Physique</b> .....   | 107 |
| <i>by G. Israel</i>                                                                                                              |     |
| <b>Physical Geometry and Special Relativity. Einstein and Poincaré</b> ....                                                      | 127 |
| <i>by M. Paty</i>                                                                                                                |     |
| <b>Transport parallèle et Connexions en Géométrie et en Physique</b> .....                                                       | 150 |
| <i>by J.-P. Bourguignon</i>                                                                                                      |     |

### Part 3 Formalism and Intuition

|                                                                                      |     |
|--------------------------------------------------------------------------------------|-----|
| <b>De la Géométrie Formelle à l'Algèbre Abstraite</b> .....                          | 167 |
| <i>by H. Sinaceur</i>                                                                |     |
| <b>Le Principe de Dualité : sa Signification Historique et Épistémologique</b> ..... | 175 |
| <i>by L. Geymonat</i>                                                                |     |
| <b>The Formal and the Transcendental in Mathematics</b> .....                        | 178 |
| <i>by G.G. Granger</i>                                                               |     |
| <b>Un Panorama des Mathématiques</b> .....                                           | 184 |
| <i>by R. Thom</i>                                                                    |     |
| <b>Mathematical Progress as Synthesis of Intuition and Calculus</b> .....            | 192 |
| <i>by K. Volkert</i>                                                                 |     |

### Part 4 The Philosophical Problem of Space

|                                                                                 |     |
|---------------------------------------------------------------------------------|-----|
| <b>What is Space?</b> .....                                                     | 201 |
| <i>by H. Freudenthal</i>                                                        |     |
| <b>La "lineale Ausdehnungslehre" (1844) de Hermann Günther Grassmann</b> .....  | 205 |
| <i>by D. Flament</i>                                                            |     |
| <b>La Capture de l'Extension comme Dialectique Géométrique :</b>                |     |
| <b>Dimension et Puissance Selon l'Ausdehnung de Grassmann (1844) ...</b> .....  | 222 |
| <i>by G. Châtelet</i>                                                           |     |
| <b>Helmholtz and Poincaré's Considerations on the Genesis of Geometry</b> ..... | 245 |
| <i>by G. Heinzmann</i>                                                          |     |
| <b>Le Continu contre l'Espace</b> .....                                         | 250 |
| <i>by J.-M. Salanskis</i>                                                       |     |

### Part 5 Some Insights About Modern Physics

|                                                                        |     |
|------------------------------------------------------------------------|-----|
| <b>Geometrical Concepts in Quantum Physics</b> .....                   | 267 |
| <i>by G. Cohen-Tannoudji</i>                                           |     |
| <b>Physics and Differential Geometry</b> .....                         | 270 |
| <i>by T. Regge</i>                                                     |     |
| <b>Actuality of Transcendental Aesthetics for Modern Physics</b> ..... | 273 |
| <i>by J. Petitot</i>                                                   |     |
