

Contents

1. Theoretical and Observational Principles of the Astrophysics of Neutron Stars	1
1.1 Prediction	1
1.2 Accretion	4
1.3 Rotation and Magnetic Field	6
1.4 Radiopulsars	7
1.5 New Ideas	10
1.6 X-Ray Pulsars	12
1.7 X-Ray Bursters	17
1.8 Bursts and Other Sources of Gamma Rays	20
1.9 General View	22
2. Structure of Neutron Stars	24
2.1 Equilibrium of Stars	25
2.2 Exact Equilibrium Equations for Cold Stars	28
2.3 Physical Conditions Inside Neutron Stars	32
2.4 Parameters of Neutron Stars	33
2.5 Mass of Neutron Stars	34
2.6 Rotational Effects	37
3. Fluid Dynamics of Accretion	39
3.1 Spherically Symmetric Accretion	42
3.2 The Role of Radiation and Ejection	45
3.3 Spherical Accretion to a Neutron Star	
Without a Magnetic Field	49
3.4 Capture of Matter by a Moving Star	52
3.5 Fluid Dynamics of Cylindrical Accretion	54
3.6 Disk Accretion	57
3.7 Luminosity and Spectrum of Accretion Disks	62
3.8 Supercritical Disk Accretion	65
3.9 Accretion in Binary Systems	66
3.9.1 Overflow Through the Inner Lagrangian Point	69
3.9.2 Accretion from Stellar Wind	70
3.10 Two-Stream Accretion	78
3.11 Accretion of Magnetic Fields	79

4. Classification of Neutron Stars	82
4.1 Magnetic Dipole	83
4.2 Stopping Radius	86
4.3 Stopping Radius in the Supercritical Case	90
4.4 The Effect of a Magnetic Field	92
4.5 Gravimagnetic Parameter	92
4.6 Corotation Radius	94
4.7 Nomenclature	97
4.8 Critical Periods. The p - y and p - L Diagrams	101
5. Boundaries. Magnetospheres of Slowly Rotating Neutron Stars ...	105
5.1 Physical Conditions in the Alfvén Zone	106
5.2 Formulation of the Problem	110
5.3 Simple Configurations	111
5.4 Magnetosphere in Spherically Symmetric Accretion	115
5.5 Pascal's Pressure Law	119
5.5.1 Two-Dimensional Solutions	120
5.5.2 Three-Dimensional Solutions	123
5.6 A Dipole Confined by an Ideally Conducting Disk	124
5.6.1 Two-Dimensional Model	125
5.6.2 Three-Dimensional Problem	128
5.6.3 Dipole Rotation	130
5.7 Magnetosphere in a Plane-parallel Plasma Flow	133
5.7.1 Two-Dimensional Solution	133
5.7.2 Three-Dimensional Solution	135
5.8 Two-Stream Accretion	135
6. Accreting Neutron Stars	138
6.1 Boundary Stability	139
6.1.1 Spherically Symmetric Accretion	139
6.1.2 Disk Accretion onto a Magnetized Neutron Star	145
6.1.3 Torsion of an Accretion Disk by Magnetic Forces	149
6.1.4 Magnetosphere Boundary Stability for Two-Stream Accretion	152
6.2 The Polar Column	153
6.3 Spin-up, Spin-down and Induced Precession of Accreting Stars	158
6.3.1 Spin-up Torque	158
6.3.2 Spin-down Torque	159
6.3.3 Analytical Model of Torques Applied to a Magnetized Accreting Star	160
6.3.4 Equilibrium Period	162
6.4 Observed Properties of X-Ray Pulsars	163
6.5 Energy Parameters of Pulsars and Transport of Matter in Binary Systems	164
6.6 Spectrum and Magnetic Fields	167

6.7	Periods of X-Ray Pulsars and Their Variation	169
6.7.1	Equilibrium of X-Ray Pulsars	171
6.7.2	Magnetic Fields of X-Ray Pulsars	174
6.7.3	Reasons Behind the Average Spin-up of X-Ray Pulsars	176
6.7.4	Rapid Fluctuation of Periods and Internal Structure of Neutron Stars	180
6.8	Variability of X-Ray Sources. Transients	180
6.9	Generation of Relativistic Particles	183
6.10	X-Ray Bursters	184
6.10.1	Localization and Spatial Distribution	186
6.10.2	Periodic Variations of X-Ray Flux. X-Ray Eclipses ...	187
6.10.3	Luminosity and Spectra of Bursters	187
6.11	Nuclear Burning at the Surface of Neutron Stars. Spherically Symmetric Model	189
6.12	Accretion to X-Ray Bursters	194
6.12.1	Accretion for $\mu < \mu_{\min}$	195
6.12.2	Accretion in a Weak Magnetic Field ($\mu \gtrsim \mu_{\min}$)	196
6.12.3	Nonstationary Spherically Symmetric Accretion	198
6.13	Spinning-up of Weakly Magnetized Neutron Stars	200
6.14	Low-Mass X-Ray Sources. "Noisars"	204
6.15	p - y Diagram for Accreting Neutron Stars	206
7.	The "Propeller" Regime	208
7.1	Quasistatic Shells	210
7.1.1	Supersonic Propeller	212
7.1.2	Subsonic Propeller	214
7.1.3	Very Rapid Propeller	215
7.1.4	Nongravitating Propeller	216
7.2	Spinning-down in the Boundary Layer	217
7.3	Two-Stream Flow Formation due to the Propeller Effect ...	218
7.3.1	Stationary Flow from Disks	218
7.3.2	Time-Dependent Solution	219
7.4	Dead Disks and Accumulator Disks	220
7.5	Nonstationary Disk Accretion. Model of Transient X-Ray Sources	222
7.6	Relativistic Propeller	224
7.7	Objects That Can Become Propellers	224
7.7.1	Binary Systems	224
7.7.2	Single Neutron Stars	225
8.	Ejecting Stars	227
8.1	Observed Characteristics of Radiopulsars	227
8.1.1	Periods and Their Variation	228
8.1.2	Pulse Structure	229
8.1.3	Spectrum and Luminosity	230
8.1.4	Distribution of Pulsars in Space	232

8.1.5	Spatial Velocity of Radiopulsars	233
8.1.6	Pulsars and Binary Systems	234
8.2	Radiopulsars as Ejecting Neutron Stars	234
8.3	Pulsar Electrodynamics and Generation of Relativistic Particles	236
8.3.1	Vacuum Approximation	237
8.3.2	Magnetosphere in the Presence of Plasma	239
8.4	Mechanisms of Radiation	243
8.5	Caverns Around Neutron Stars	245
8.5.1	Caverns in Binary Systems	245
8.5.2	Caverns Around a Single Neutron Star	248
8.5.3	Effect of Relativistic Wind on Accretion Flow Parameters	250
8.6	Change in Radiopulsar Period	251
8.6.1	Spin-down of Pulsars and Their Magnetic Fields	251
8.6.2	Spin-up Episodes and Internal Structure of Neutron Stars	254
8.7	Evolution of Radiopulsars	255
8.7.1	Origin and Age of Pulsars	256
8.7.2	Evolution of the Radiopulsar Period	258
8.8	Spatial Velocities of Radiopulsars	259
8.9	Ejecting Stars in Binary Systems	262
8.9.1	Radiopulsars Forming Pairs with Degenerate Stars ..	262
8.9.2	"Reflection" Effect	265
8.9.3	Observational Evidence of the Existence of Ejecting Stars in Binary Systems	266
9.	Supercritical Regimes	267
9.1	Superaccretor	268
9.1.1	Accretion Pattern	268
9.1.2	Neutrino Pulsar	270
9.1.3	Spin-up and Spin-down	271
9.2	Superejectors and Superpropellers	272
9.3	Is SS 433 a Superaccretor?	272
9.4	Other Candidates	275
10.	Stars with an Anomalously Low Value of Gravimagnetic Parameter	277
10.1	Georotators	277
10.2	Binary Magnetic Systems (Magnetors)	279
11.	Evolution of Stars	280
11.1	Normal Stars	280
11.1.1	Single Stars	280
11.1.2	Binary Stars	282
11.2	Evolution of Neutron Stars	287

11.2.1 Evolution Equation	287
11.2.2 Statistical Description of the Ensemble of Neutron Stars	290
11.3 Neutron Star Tracks	292
11.4 Numerical Simulation of the Joint Evolution of Normal and Neutron Stars	293
11.4.1 Computational Method	294
11.4.2 Evolutionary Tracks	295
11.4.3 Simulation of X-Ray Pulsars (Stage IIA) and the Choice of Optimal Parameters	297
11.4.4 Abundance of Different Types of Systems in the Galaxy	298
11.4.5 Physical Characteristics of Neutron Stars at Various Stages of Evolution	299
11.4.6 Two Types of Radiopulsars	300
11.5 Possible Candidates	301
11.5.1 "Runaway" Stars	301
11.5.2 The SS 433 Object	301
11.5.3 "Single" Wolf-Rayet Stars	302
11.5.4 Collapse Anisotropy	302
11.5.5 Other Numerical Models	303
Appendix	304
Magnetohydrodynamic Instabilities	304
Rayleigh-Taylor (RT) Instability	304
Commutation Instability	307
