Contents

1	Space, Time and Maxwell's Equations	1
1.1	Introduction	1
1.2	Maxwell's Equations and Galilean Transformations	1
1.3	The Newtonian View of Space and Time	3
2	Inertial Coordinates	5
2.1	Basic Principles	5
2.2	Lorentz Transformations	8
2.3	Time Dilatation	11
2.4	The Standard Lorentz Transformation	12
2.5	The Lorentz Contraction	14
2.6	Transformation of Volumes	15
2.7	Addition of Velocities	16
2.8	The Michelson-Morley Experiment	17
3	Vectors in Space-Time	19
3.1	4-Vectors	19
3.2	The Metric	20
3.3	The Causal Structure of Minkowski Space	21
3.4	Orthonormal Frames	22
3.5	Decomposition of 4-Vectors	24
3.6	Vector Fields	25
3.7	4-Velocity and Proper Time	25
3.8	4-Acceleration	26
3.9	Relative Speed	29
3.10	The 4-Gradient	29
3.11	The Frequency 4-Vector	30
3.12	The Appearance of Moving Objects	31
3.13	Examples and Exercises	33
4	Relativistic Particles	37
4.1	Conservation of 4-Momentum	37
4.2	Equivalence of Mass and Energy	39
4.3	The 4-Momentum of a Photon	39
4.4	4-Force	40
4.5	Examples and Exercises	40
5	Tensors in Space-Time	45
5.1	Covectors	45
5.2	Raising and Lowering of Indices	46

5.3	Tensors	46
5.4	Operations on Tensors	47
5.5	The Alternating Tensor	49
5.6	Tensor Fields	49
5.7	Example and Exercises	50
6	Electrodynamics	53
6.1	Tensor Formulation of Maxwell's Equations	53
6.2	Gauge Transformations	55
6.3	The Dual Electromagnetic Field Tensor	55
6.4	Advanced and Retarded Solutions	56
6.5	The Field of a Uniformly Moving Charge	60
6.6	The Equation of Motion of a Test Charge	61
6.7	Plane Waves	62
6.8	Geometric Optics	63
6.9	Examples and Exercises	65
7	Energy-Momentum Tensors	69
7.1	Dust	69
7.2	The Ideal Gas	70
7.3	Conservation of Energy	71
7.4	Another Form of Energy Conservation	72
7.5	Fluids	72
7.6	The Electromagnetic Energy-Momentum Tensor	74
8	Symmetries and Conservation Laws	77
8.1	Isometries	77
8.2	Killing Vectors	77
8.3	Translations and Lorentz Rotations	79
8.4	Active and Passive Transformations	81
8.5	Conservation of Momentum and Angular Momentum	81
8.6	Exercises	82
	Index	85
