<b>Summary</b>	<b>1</b>
<b>1. Introduction</b>	<b>4</b>
<b>2. Known causes of rainfall erosion and definition of the problems</b>	<b>6</b>
2.1 Causes and characteristics of rainfall erosion in the tropics	6
2.1.1 The erosivity of the climate	6
2.1.2 Soil erodibility	9
2.1.2.1 Texture	10
2.1.2.2 Organic Matter	11
2.1.2.3 Aggregate stability	11
2.1.2.4 Infiltration rate	13
2.1.2.5 Oxides of iron and aluminium	13
2.1.2.6 Plasticity and consistency limits	14
2.1.2.7 Swelling and shrinking	15
2.1.2.8 Water regime	15
2.1.3 Relief	16
2.1.3.1 Slope inclination	16
2.1.3.2 Slope length	17
2.1.4 Land use	18
2.1.4.1 Soil tillage	18
2.1.4.2 Soil cover	19
2.1.5 Measures of erosion control	22
2.1.5.1 Contouring	22
2.1.5.2 Strip cropping	23
2.1.5.3 Contour ridges	24
2.1.5.4 Terraces	24
2.2 The problem of soil erosion in Colombia	25
2.3 Research objectives and hypothesis	27
<b>3. Material and methods</b>	<b>29</b>
3.1 Location and ecological conditions of the study area	29
3.1.1 Climate and vegetation	29
3.1.2 Geology	34
3.1.3 Geomorphology	34
3.1.4 Soils	35
3.1.4.1 CIAT-Research-Station Santander de Quilichao	36
3.1.4.2 Mondomo	37
3.1.5 Landuse systems	38
3.2 Layout of field experiments and treatments	42
3.3 Observations, measurements and data collection	51
3.3.1 Precipitation and other climatic factors	51
3.3.2 Soil and runoff	51

3.3.2.1	Measurements of soil loss and runoff	52
3.3.2.2	Physical soil analyses	52
	- Grain size distribution	52
	- Clay minerals	53
	- Aggregate sizes	53
	- Aggregate stability	53
	- Bulk density	54
	- Infiltration rate	54
	- Field capacity	54
	- Water retention	54
	- Soil water content over the course of time	55
	- Plasticity and consistency limits	55
	- Dry soil loss	55
3.3.2.3	Chemical soil and water analyses	56
	- Soil reaction	56
	- Organic matter	56
	- Total-Nitrogen	56
	- Aluminium, Calcium und Magnesium	56
	- Potassium	56
	- Zinc, Copper, Iron and Manganese	56
	- Boron	56
	- Phosphorus	57
	- Sulphur	57
3.3.3	Agronomic practices and measurements	57
3.3.3.1	Planting, sowing and yields	57
	- Soil tillage	57
	- Planting and sowing	58
	- Fertilization	58
	- Plant protection and weeding	59
	- Harvest	59
3.3.3.2	Ground cover and plant growth	59
3.4	Application of the Universal Soil Loss Equation (Method of WISCHMEIER und SMITH)	60
4.	<b>Results and discussion</b>	74
4.1	Processes of soil erosion in selected cropping systems with cassava	74
4.1.1	Soils of the study area	74
4.1.1.1	Santander de Quilichao	74
4.1.1.2	Mondomo	82
4.1.2	The erosivity of the rainfall	87
4.1.3	Soil loss and cropping system	98
4.1.3.1	Tolerance limit of soil loss	98
4.1.3.2	Soil loss over the course of time	98
4.1.3.3	Runoff	110
4.1.3.4	Soil tillage and type of erosion	114
4.1.3.5	Type and degree of soil cover	120
4.1.4	Changes of selected physical and chemical soil properties during the test period	133
4.1.4.1	Physical soil properties	133
	- Grain size distribution	133
	- Aggregate stability and aggregate size distribution	135
	- Bulk density and infiltration rate	136
	- Plasticity and consistency	138
	- Water regime	139

4.1.4.2	Chemical soil properties	142
4.1.5	Losses of organic matter and nutrients	146
4.1.6	Yields of traditional and improved cassava cropping systems	155
4.1.6.1	Cropping systems and yields	155
4.1.6.2	Economic evaluation of the cropping systems	163
4.2	Applicability of the Universal Soil Loss Equation under the conditions of the study area	167
5.	Conclusions	171
	Literature cited	174
	Appendix	183
