Index of Symbols

A	Heat Transfer in Condensation	1
1	Fundamentals	3
1.1	The Process of Condensation	3
1.2	The Different Types of Condensation	4
2	Film Condensation of Stagnant Vapors	7
2.1	The Nusselt Film Condensation Theory	7
2.2	Deviations from the Nusselt Film Condensation Theory	11
2.2.1	Consideration of the Resistance by the Condensate Film	11
2.2.2	Consideration of the Resistance at the Phase Interface Between Liquid and Vapor	14
2.2.3	Influence of Noncondensable Gases	14
2.2.4	Wave Formation on the Film Surface	18
2.2.5	Temperature-Dependent Property Values	19
2.3	Film Condensation with a Turbulent Film	21
2.4	Practical Equations	24
2.4.1	Single Tubes	24
2.4.2	Tube Bundles	26
3	Drop Condensation of Stagnant Vapors	28
4	Condensation of Flowing Vapors	32
4.1	Laminar Film Condensation	32
4.2	Turbulent Film Condensation in Vertical Tubes	35
4.2.1	General Equations	35
4.2.1.1	The Mass and Momentum Balances	35
4.2.1.2	The Energy Balance	40

4.2.2	Models for the Solution of the Equations	41
4.2.3	Practical Equations	49
4.3	Film Condensation in Horizontal Tubes	54
4.3.1	Heat Transfer During Stratified Flow	55
4.3.1.1	Relation Between Void Fraction and Quality in Stratified Flow	58
4.3.2	Heat Transfer During Film Flow or Annular-Dispersed Flow	60
4.3.2.1	Mass and Momentum Balance	60
4.3.2.2	The Energy Balance	61
4.3.3	The Practical Calculation of Heat Transfer Coefficients . . .	62
5	Condensation of Metal Vapors	66
6	Condensation of Vapors of Miscible Liquids	71
6.1	Fundamentals. Influence of the Mass Transfer	71
6.2	The Different Types of Condensation of Vapor Mixtures . .	75
6.3	The Temperature at the Phase Interface	80
6.4	The Practical Calculation of Heat Transfer Coefficients . . .	85
6.4.1	The Approximation Procedure of Silver	85
6.4.2	Binary Mixtures. The General Procedure	88
6.4.3	Binary Mixtures. Approximation According to Colburn and Hougén	94
6.4.4	Multi-component Mixtures	96
7	Condensation of Vapors of Immiscible Liquids	104
8	Enhancement of Heat Transfer During Condensation	109
8.1	Fundamentals	109
8.2	Increasing the Vapor Velocity	110
8.3	Roughened Tubes, Finned Tubes	111
8.4	Gregorig Tubes	114
8.5	Condensation in Tubes	117
B	Heat Transfer in Boiling	119
9	The Different Types of Heat Transfer During Boiling. . . .	121
9.1	Evaporation	121
9.2	Nucleate Boiling	122
9.3	Convective Boiling	123

10	Physical Fundamentals of Vapor Bubble Formation	126
10.1	Bubble Formation and Liquid Superheating	126
10.2	Bubble Contour and Limiting Volume	132
10.3	Application Equations for Departure Diameter and Frequency	135
11	Heat Transfer During Boiling of Pure Substances in Free Convection	140
11.1	Fundamentals	140
11.2	Stability During Boiling in Free Convection	142
11.3	Models of Heat Transfer	145
11.3.1	Evaluation of the Models	149
11.4	Empirical Correlations and Application Equations	150
11.4.1	Heat Transfer in the Vicinity of Ambient Pressure	150
11.4.2	Influence of Boiling Pressure and Heat Flux	151
11.4.3	Influence of the Heating Surface	154
11.5	Heat Transfer on Finned Tubes	155
11.6	Heat Transfer in Horizontal Smooth or Finned Tube Bundles	158
11.7	Peak Nucleate Boiling Heat Flux	160
11.8	Transition Boiling and Film Boiling	162
12	Heat Transfer in Falling Film Evaporators	168
12.1	Heat Transfer Coefficients for Vertical Tubes	169
12.1.1	Heat Transfer with Negligible Vapor Shear Stress	169
12.1.2	The Influence of Vapor Flow	171
12.1.3	Dryout of the Heating Surface and the Influence of Vapor Bubble Formation on Heat Transfer	171
13	Heat Transfer During Boiling of Pure Substances in Forced Flow	174
13.1	The Different Flow Patterns	174
13.1.1	Upward Two-Phase Flow in Vertical Tubes	174
13.1.2	Two-Phase Flow in Horizontal Tubes	176
13.2	Flow Pattern Maps	177
13.3	Several Basic Concepts and Definitions	180
13.4	Pressure Drop	184
13.4.1	Frictional Pressure Drop	186
13.4.2	The Homogeneous Model	188
13.4.3	The Heterogeneous or Separated Model	189

13.4.3.1	The Procedure of Lockhart and Martinelli	189
13.4.3.2	The Procedure of Martinelli and Nelson	191
13.4.3.3	The Procedure of Baroczy and Baroczy-Chisholm	193
13.4.3.4	The Procedure of Theissing	195
13.4.3.5	The Procedure of Chawla	196
13.4.3.6	The Equation of Lombardi and Pedrocchi	197
13.4.3.7	Summarizing Remarks on the Calculation of the Frictional Pressure Drop	198
13.5	The Different Regions of Heat Transfer	198
13.6	Subcooled Boiling	201
13.6.1	Inception of Subcooled Boiling	203
13.6.2	Partial Subcooled Boiling	210
13.6.3	Fully Developed Subcooled Boiling	213
13.7	Nucleate Boiling in a Saturated Liquid	213
13.8	Convective Boiling	217
13.8.1	Vertical Tubes	218
13.8.2	Horizontal Tubes	224
13.9	Critical Boiling Conditions	228
13.9.1	Limiting Values for the Critical Heat Flux	230
13.9.2	Experimental Results for the Critical Heat Flux	231
13.9.2.1	The Dependence of the Critical Heat Flux on the Mass Flux and Subcooling	232
13.9.2.2	The Dependence of the Critical Heat Flux on the Subcooling and Heated Length	233
13.9.2.3	The Dependence of the Critical Heat Flux on the Subcooling and the Tube Diameter	235
13.9.2.4	The Dependence of the Critical Heat Flux on the Pressure and the Quality	236
13.9.3	Application Formulas for the Critical Heat Flux	237
13.9.3.1	Vertical Tubes	237
13.9.3.2	Horizontal and Inclined Tubes	240
13.9.3.3	Nonuniform Heating Around the Tube Circumference	242
13.10	Spray Cooling	244
13.10.1	Spray Cooling in Channels	244
13.10.1.1	A Calculation Model	247
13.10.1.2	Application Equations	251
13.10.2	Spray Cooling of Hot Surfaces	252
13.10.2.1	A Calculation Model	256
13.10.2.2	Application Equations	260

14	Heat Transfer During Boiling of Mixtures in Free Convection	262
14.1	Binary Mixtures. Physical Fundamentals	262
14.1.1	Bubble Formation and Wall Superheat	264
14.2	Heat Transfer in Binary Mixtures	269
14.3	Heat Transfer in Mixtures with more than two Components	274
14.4	Empirical Correlations and Application Equations	275
14.4.1	Binary Mixtures of Liquids	275
14.4.2	Liquid Mixtures with more than two Components	278
14.4.3	Solutions of Solids in Liquids	279
14.5	Maximum Heat Flux, Transition Boiling and Film Boiling	280
14.6	Boiling of Immiscible Liquids	282
15	Heat Transfer During Boiling of Mixtures in Forced Flow	285
15.1	Saturated Boiling	285
15.2	Convective Boiling	286
15.3	The Practical Calculation of the Heat Transfer Coefficient During Convective Boiling	290
16	Enhancement of Heat Transfer During Boiling	292
16.1	General Observations	292
16.2	Roughening of Heating Surfaces	293
16.3	Structuring or Coating of Surfaces	294
16.4	Production of Artificial Nucleation Sites by Sintering	295
16.5	Tubes with Formed Surfaces, Tubes with T-shaped Fins	298
16.6	Addition of Gases or Liquids	299
16.7	Addition of Solids	300
	Bibliography	302
	Index of Names	317
	Subject Index	321
