
Table of Contents

I	Some general facts	7
§ 1	Ring reduction to PID	7
§ 2	Modules	7
II	Some notes on representation theory	9
§ 1	Blocks	9
§ 2	Normalizers of p -Sylow subgroups of group bases	11
§ 3	Cohomology rings	12
§ 4	Profinite groups	13
III	The leading coefficient of units	15
IV	Class sum correspondence	21
V	More on the class sum correspondence	27
§ 1	Power map	28
§ 2	Character tables	31
§ 3	Unit groups of rings	33
VI	Subgroup rigidity	38
§ 1	Statement of the results	39
§ 2	The Proof of the First Theorem	42
§ 3	The Proof of the Second Theorem	51
VII	Global units	60
§ 1	Picard-groups and automorphisms	60
§ 2	Conjugacy Classes of Finite Subgroups in $V(\mathbb{Z}G)$	62
§ 3	Conjugacy of Finite Subgroups to Group Bases	68
VIII	Locally isomorphic group rings	74
IX	Zassenhaus conjecture	82
§ 1	A Semi Local Counterexample	82
§ 2	A general observation on the Zassenhaus conjecture	88
X	Variations of the Zassenhaus conjecture	91
§ 1	Automorphisms	91
§ 2	Indecomposable groups	94
§ 3	Brauer trees	99
XI	Group Extensions	104
§ 1	Isomorphic Group Extensions	104
§ 2	A first Application to the Isomorphism Problem	106
§ 3	Using subgroup rigidity	109
§ 4	The main result	115

XII	Class sums of p-elements	117
§ 1	Groups with nilpotent commutator subgroup	117
§ 2	Sylow subgroups	121
XIII	Clifford theory revisited	125
XIV	Examples	141
§ 1	Extending the cyclic group of order 6	141
§ 2	Sylow subgroups in the principal block	141
§ 3	Examples concerning Clifford's theory	142
