Introduction	1
1 Global solutions to wave equations — existence theorems	7
2 L^p – L^q -decay estimates for the linear wave equation	15
3 Linear symmetric hyperbolic systems	21
3.1 Energy estimates	22
3.2 A global existence theorem	28
3.3 Remarks on other methods	32
4 Some inequalities	34
5 Local existence for quasilinear symmetric hyperbolic systems	58
6 High energy estimates	79
7 Weighted a priori estimates for small data	84
8 Global solutions to wave equations — proofs	91
8.1 Proof of Theorem 1.1	91
8.2 Proof of Theorem 1.2	96
9 Other methods	106
10 Development of singularities	110
11 More evolution equations	114
11.1 Equations of elasticity	116
11.1.1 Initially isotropic media in $\mathbb{R}^3$	116
11.1.2 Initially cubic media in $\mathbb{R}^2$	123
11.2 Heat equations	139
11.3 Equations of thermoelasticity	146
11.4 Schrödinger equations	181
11.5 Klein–Gordon equations	186
11.6 Maxwell equations	196
11.7 Plate equations	201
12 Further aspects and questions	212

Appendix	226
A Interpolation	226
B The Theorem of Cauchy-Kowalevsky	233
C A local existence theorem for hyperbolic-parabolic systems	237
References	245
Notation	256
