

Table of Contents

Preface	v
Advisors and Organising Committee	vii
Workshop lectures	
M. A. PINSKY <i>Inverse questions in stochastic differential geometry</i>	3
D. W. STROOCK <i>Estimates on the heat kernel for second order divergence form operators</i>	29
Special invited lecture	
K. ITÔ <i>On Malliavin calculus</i>	47
Invited lectures	
C. C. HEYDE & R. GAY <i>Thoughts on the modelling and identification of random processes and fields subject to possible long-range dependence</i>	75
T. HIDA <i>White noise and Gaussian random fields</i>	83
H. KESTEN <i>Connectivity of certain graphs on halfspaces, quarter spaces, ...</i>	91
S. KOTANI <i>One dimensional Schrödinger operators with stationary deterministic potentials</i>	105
M. A. PINSKY & V. WIHSTUTZ <i>Lyapunov exponents and rotation numbers of linear systems with real noise</i> ..	109

J. POTTHOFF & J. A. YAN

Some results about test and generalized functionals of white noise121

D. O. SIEGMUND

Tail approximations for maxima of random fields147

C. STEIN

A way of using auxiliary randomization159

S. WATANABE

Disintegration problems in Wiener functional integrations181

Appendices

List of contributors201

List of participants203
