## **PART 1 Trends in Medical Informatics Setting the Scene**

---

1	The Current Healthcare System: In a State of Transition .....	3
1.1	Setting the Scene .....	5
1.2	Trends in Medical Informatics .....	5
2	Health Care Actors: Objectives and Requirements .....	7
2.1	Organisational Trends .....	7
2.2	Objectives and Requirements for the Hospital Management .....	8
2.3	Objectives and Requirements for the Clinical User .....	10
2.4	Objectives and Requirements from the Patient .....	11
2.5	Objectives and Requirements from Health Care Authorities .....	12
3	The Genesis of Hospital Information Systems: A Look at the Past and the Future .....	13
3.1	Introduction .....	13
3.2	First Generation .....	13
3.3	Present Situation in Europe .....	14
3.4	Next Generation .....	14
4	Computer System Fundamentals .....	19
4.1	Computer Generations: Past, Present and Future .....	19
4.2	Concepts of Computer Systems .....	24
4.2.1	The Hardware Level .....	24
4.2.2	Operating Systems .....	25
4.2.3	MUMPS .....	27
4.2.4	File Systems and the Future .....	28
5	Standardization in Medical Informatics .....	32
5.1	The Need for Standards .....	32
5.2	Standardization Bodies .....	35
5.3	Medical Standardization Groups .....	37
5.3.1	Health Level Seven .....	37
5.3.2	MEDIX IEEE P1157 .....	39
5.3.3	ASTM E31 .....	40
5.3.4	IEEE P1073 (MIB) .....	41
5.3.5	ACR-NEMA .....	41

6	Most Important Trends in the 1990s .....	42
6.1	Introduction .....	42
6.2	The Need for Increased Processing Power. RISC/CISC/ Multiprocessors .....	42
6.3	The Need for Archiving Huge Amounts of Data .....	47
6.4	The Need for Communication. Local Area Networks .....	51
6.5	The Need for Cooperative Computing .....	53
6.6	The Undeniable Importance of the User Interface .....	59
6.7	The Need for Higher Productivity Software Tools .....	66
6.8	Conclusion .....	66
7	Modelling Health Care Systems .....	67
7.1	The Software Dilemma .....	67
7.2	The Software Development Process. The Software Life Cycle .....	68
7.3	Changing the Way Applications Are Developed .....	71
7.3.1	Creators Not Users .....	71
7.3.2	Computer-Aided Software Engineering .....	71
7.3.3	Reverse Engineering .....	73
7.4	The Object-Oriented Paradigm .....	73
7.4.1	Object-Oriented Analysis .....	73
7.4.2	Object-Oriented Design .....	74
7.4.3	Object-Oriented Programming Languages .....	77
7.4.4	Considerations .....	77
8	The Make or Buy Decision .....	78
8.1	The Buy Side .....	78
8.2	The Make Side .....	79
8.3	Planning for Acquisition of an Information System: Some Remarks .....	79
9	Computer Safety in Health Care Systems .....	82
9.1	The Need for Security Administration .....	82
9.2	Security, Integrity and Recovery Mechanisms in Database Systems .....	85
9.3	Fault-Tolerant Information Systems in Hospitals .....	86
9.4	The Phenomenon of Computer Viruses .....	86

## **PART 2: Hospital Management Systems**

---

10	Architecture of a Hospital Information System .....	91
10.1	Hospital Information Systems: A Definition .....	91
10.2	Design Objectives of a Hospital Information System .....	94
10.3	The Integration Challenge .....	96
10.3.1	Moving from Data Exchange to Information Sharing .....	94
10.3.2	Levels of Integration .....	96
10.4	The Urgent Need for a Broadly Accepted Framework .....	101
10.5	Heading for Harmony .....	102
10.5.1	The Health Care Information Framework .....	102
10.5.2	The Health Care Information System Architecture .....	103
10.5.3	Common Conceptual Schemas .....	103

10.6	The Hospital Information System Architecture .....	106
10.7	A Generic Model for a Hospital Information System .....	108
10.7.1	Application-Driven Versus Object-Driven Approach .....	108
10.7.2	Generic Limited Model .....	108
10.7.3	The OO-Model .....	110
10.7.4	The ER-Model .....	111
10.7.5	Object Descriptions .....	112
11	The Patient Management Systems .....	123
11.1	Introduction .....	123
11.2	Inpatient Management .....	123
11.3	Outpatient Management .....	125
11.4	Reports .....	125
11.5	Resource Utilization Parameters in Hospitals .....	126
11.6	Patient Cards. An overview .....	126
11.7	Hospital Information Systems in Europe .....	131
11.7.1	An Integrated Hospital Information System in Geneva (DIOGENE) ..	131
11.7.2	An Integrated Hospital Information System in Brussels (A.Z.-VUB) ..	133
11.8	Hospital Bar Coding .....	136
12	Order Entry and Result Reporting Management Systems .....	138
12.1	Introduction .....	138
12.2	The Order Entry Module .....	139
12.2.1	Order Entry Methods .....	139
12.2.2	Collection, Processing and Tracking of Orders: Guidelines .....	140
12.3	Result Entry Module .....	145
13	Patient Appointment and Scheduling .....	149
13.1	Patient Appointment Systems: Different Viewpoints .....	149
13.2	Minimal Requirements of a Patient Appointment and Scheduling System ....	152
13.3	Specifications for an Appointment Information System .....	154
13.4	Points of Consideration .....	157
14	Operating Theatre Management Information System .....	158
14.1	History .....	158
14.2	Scheduling of Surgical Procedures .....	159
14.3	Automated OR Record and Anaesthetic Record .....	160
14.4	Inventory Management .....	162
14.5	Charge Capturing .....	162
14.6	The Integration Issue .....	164
14.7	Documentation of the Operating Room .....	164
14.8	Reporting Tools .....	164
15	Automation in Nutrition .....	166
15.1	Introduction .....	166
15.2	Aims .....	166
15.3	Preceding Concepts .....	166
15.4	Organization of the Kitchen .....	166

15.5	Nutritional Value Analysis and Evaluation	169
15.6	Functional Requirements of an Automated Nutrition System	170
16	Laboratory Information Systems	171
16.1	History	171
16.2	Functions of a Laboratory Information System	174
16.3	Order Entry Management	174
16.4	Results Management	176
16.5	Data Acquisition	177
16.6	Results Reporting	178
16.7	Quality Control	178
17	Radiology Information Systems	180
17.1	Natural Couples	180
17.2	Constituents of Radiology Information Systems	182
17.2.1	Examination Requisition	184
17.2.2	Scheduling	184
17.2.3	Acquisition	185
17.2.4	Diagnostic Reporting	185
17.2.5	Teaching File	186
17.2.6	Results Reporting: Mailing Facility	186
17.2.7	Film and Patient Tracking	187
17.2.8	Management Reports and Billing	187
17.2.9	Inventory Tracking	188
17.2.10	Equipment Maintenance	188
17.3	Relationship of IMACS to HIS	189
17.4.1	Image Acquisition Nodes	189
17.4.2	Image Communication Network	189
17.4.3	Image Viewing Station	189
17.4	Distributed Radiology Systems: A Possible Architecture	190
18	Oncology Information Systems	192
18.1	Introduction	192
18.2	Chemotherapy	195
18.3	Radiotherapy	196
18.3.1	Treatment Planning	198
18.3.2	Simulation	200
18.3.3	Treatment Delivery	201
18.3.4	Computer-Assisted Therapy Planning	201
18.3.5	Portal Images	201
18.3.6	Future Trends	203
19	Pharmacy Information Systems	204
19.1	Introduction	204
19.2	Functions of a Pharmacy Information System	206
19.2.1	Prescription	206
19.2.2	Dispense	207
19.2.3	Administer	207
19.2.4	Monitor	208

19.3	Organizational Aspects of Pharmacy Information Systems	208
19.4	Drug Databases	210
19.5	Medication Control	210
19.6	Future Pharmacy Systems	212
20	Nursing Information Systems	214
20.1	Introduction	214
20.2	Objectives of a Nursing Information System	215
20.3	Functions of a Nursing Information System	216
20.3.1	Patient Care Processes	217
20.3.2	Ward Management Processes	218
20.3.3	Communication Processes	219
20.4	Bedside Terminals	222
21	Hospitals Financing: Challenges of the 1990s	225
21.1	Introduction	225
21.2	Health Care Financing in Europe	226
21.3	Health Care Financing in the USA	227
21.4	Basic Health Care Economics	229
21.4.1	Cost Versus Quality Considerations	229
21.4.2	Determination of Profitability Improvement: ROI Analysis	230
21.5	Main Components of a Financial System	232

### **PART 3: Medical Computing Applications**

---

22	Medical Data: Acquisition, Manipulation and Analysis	239
22.1	Introduction	239
22.2	Signal Registration	240
22.3	Signal Conversion	242
22.4	Signal Improvement	242
22.4.1	Medical Imaging: Basic Concepts	244
22.4.2	Current Image Data Requirements	244
22.5	Data Compression	245
22.6	Parameter Extraction and Pattern Recognition	246
23	Automatization in Cardiology	248
23.1	Introduction	248
23.2	The Electrocardiogram	249
23.2.1	Input	250
23.2.2	Parameter Extraction and Wave Recognition	250
23.2.3	Rhythm and Contour Analysis	252
23.2.4	Output	252
23.3	The Vector Diagram	252
23.4	The Stress Test (Exercise-Electrocardiogram)	253
23.5	The 24-h Electrocardiogram (Holter Scanning)	254
23.6	Body Surface Potential Maps	254
23.7	Heart Catheterisation	255

23.8	Pacemaker Technology .....	256
24	Automatization in Pneumology .....	258
24.1	Anatomy and Physiology .....	258
24.1.1	The Respiratory Passages/Airways .....	259
24.1.2	The Lung Tissue .....	259
24.2	Pulmonary Function Tests .....	259
24.2.1	Spirometry .....	260
24.2.2	The Lung Mechanics .....	260
24.3	Pulmonary Function Measurements .....	262
24.3.1	Spirometry .....	262
24.3.2	Volume Flow Curve .....	263
24.3.3	Total Lung Capacity, Airway Resistance and Distribution Disturbances .....	264
24.3.4	Distribution of Ventilation .....	264
24.3.5	Compliance .....	264
24.3.6	Lung Diffusion Measurements .....	265
24.3.7	Gas Diffusion Measurement .....	265
24.3.8	Functional Residual Capacity: Helium Rebreathing .....	266
25	Patient Monitoring Systems .....	267
25.1	Past and Next Generation Intensive Care Unit Systems .....	267
25.2	The Role of Computers in Monitoring .....	268
25.2.1	Integrated Patient Management .....	269
25.2.2	Monitoring of Physiological Parameters .....	270
25.3	The Requirements .....	272
25.4	Areas and Functions .....	273
25.5	Computers in Renal Care .....	276
25.6	Processing Wave Forms in Obstetrics .....	276
26	Computer Stored Medical Record Systems .....	277
26.1	Medical Records: Present Situation .....	277
26.2	Medical Record Models .....	279
26.2.1	The Input Process .....	279
26.2.2	The Output Process .....	281
26.2.3	The Storage Process .....	282
26.3	The Way Medical Records Are Organized .....	286
26.4	Computerized Medical Records: Some Examples .....	286
26.4.1	The Computer Stored Ambulatory Record .....	286
26.4.2	The Medical Record System .....	286
26.4.3	The Regenstrief Medical Record System .....	287
26.4.4	The Summary Time Oriented Record .....	287
26.5	Minimum Basic Data Set .....	296
26.6	A Name Is Not Enough: Classification and Coding Schemes .....	296
26.7	The Unified Medical Language .....	302
26.8	Architecture of an Electronic Medical Record System .....	302
26.8.1	Conversion from Paper Records to Computerized Medical Records: Some Considerations .....	305

26.9	Bibliographic Retrieval Systems	306
26.9.1	The Information Overload	306
26.9.2	On-line Database Service	306
26.9.3	CD-ROM	308
27	Computer Assisted Clinical Decision Making	309
27.1	Introduction	309
27.2	Survey of Underlying Decision-Science Methodologies	310
27.3	Decision trees and Decision Tables	311
27.4	Reasoning with Uncertainty. Bayes' Theorem	312
27.5	Decision Analysis	315
27.5.1	Sensitivity Analysis	317
27.6	Artificial Intelligence	318
27.7	Architecture for an Expert System	321
27.8	Tools for Developing Expert Systems	325
27.9	Illustrative Examples of Some Clinical Decision Support Systems	326
27.9.1	MYCIN	326
27.9.2	ONCOCIN Therapy Planning System	328
27.9.3	CASNET (Causal Association Network)	330
27.9.4	The HELP System	331
27.10	Coupling Database and Artificial Intelligence Technologies: Intelligent Databases	334
28	Medical Imaging	337
28.1	A Concept of Digital Imaging	337
28.2	Computed Tomography	339
28.2.1	The Basic Measurements	339
28.2.2	Longitudinal (Linear) Tomography	341
28.2.3	Computer Assisted Tomography (CT Scanning)	341
28.2.4	Image Reconstruction	344
28.2.5	Grey-level Mapping	345
28.3	Magnetic Resonance Imaging	346
28.3.1	Physical Principles	346
28.3.2	Image Reconstruction	349
28.3.3	3D Imaging	353
28.4	Digital Subtraction Angiography	355
28.5	Ultrasound (Echography)	357
28.6	Nuclear Medicine	362
28.7	Positron-Emission Tomography (PET-Scanner)	366
28.8	Future Trends in Medical Imaging Modalities	368
29	Imaging Management and Communication Systems in Medicine	370
29.1	Introduction	370
29.2	Requirements for Successful Implementation	371
29.2.1	Coupling of IMACS with HIS and RIS	371
29.2.2	Image Storage Structure	372
29.2.3	The Network	374
29.2.4	Functional Requirements for Digital Image Workstations	375
29.2.5	User Interfaces	378

29.3	The Image Workstation .....	379
29.4	Image Analysis and Diagnostic Quality .....	381
29.4.1	Image Analysis .....	381
29.4.2	ROC Analysis .....	381
29.4.3	Future Developments: Storage Phosphor Films .....	384
29.5	IMACS Architecture .....	384
29.6	Standardization in Medical Imaging .....	386
29.6.1	The ACR-Nema Standard .....	386
29.6.2	The Standard Product Interconnect .....	387
29.7	The Future of IMACS: Perspectives and Conclusions .....	387
30	The Era of Telemedicine .....	391
30.1	Setting the Communication Scene .....	391
30.2	Communication Between Health Care Providers .....	393
30.2.1	Wide Area Networks. Integrated Services Digital Network (ISDN) ..	393
30.2.2	X400 MHS: An Introduction .....	394
30.2.3	A Basic Introduction to EDIFACT .....	395
30.2.4	ASN.1 .....	395
30.2.5	Open/Office Document Architecture .....	396
30.3	Applications .....	396
30.3.1	Important Health Care Actors .....	396
30.3.2	Some Applications of Telemedicine .....	397
31	Computerized Surveillance System for Nosocomial Infections .....	400
31.1	Introduction .....	400
31.2	Case: University Hospital of Brussels .....	401
31.3	Discussion .....	403

## **PART 4 Hospital Information Systems in the Years Ahead**

---

32	Hospital Information Systems: The Future Is Now! .....	407
32.1	Coping with Technology. The New Environment .....	407
32.1.1	Conceptual Requirements .....	407
32.2	Giving the Renovation a Chance .....	412
	Glossary .....	415
	Acronyms .....	427
	References .....	435
	Subject Index .....	461
