

Contents

Chapter I: MODULI SPACES (Gerd Faltings)

§ 1	Introduction	2
§ 2	Generalities about moduli spaces	3
§ 3	Examples	7
§ 4	Metrics with logarithmic singularities	16
§ 5	The minimal compactification of $A_g/\mathbb{C}$	21
§ 6	The toroidal compactification	25

Chapter II: HEIGHTS (Gerd Faltings)

§ 1	The definition	34
§ 2	Néron-Tate heights	40
§ 3	Heights on the moduli space	43
§ 4	Applications	50

Chapter III: SOME FACTS FROM THE THEORY OF GROUP SCHEMES (Fritz Grunewald)

§ 0	Introduction	54
§ 1	Generalities on group schemes	55
§ 2	Finite group schemes	65
§ 3	p -divisible groups	77
§ 4	A theorem of Raynaud	94
§ 5	A theorem of Tate	107

Chapter IV: TATE'S CONJECTURE ON THE ENDOMORPHISMS OF ABELIAN VARIETIES
(Norbert Schappacher)

§ 1	Statements	115
§ 2	Reductions	123
§ 3	Heights	128
§ 4	Variants	147

Chapter V: THE FINITENESS THEOREMS OF FALTINGS
(Gisbert Wüstholz)

§ 1	Introduction	155
§ 2	The finiteness theorem for isogeny classes	157
§ 3	The finiteness theorem for isomorphism classes	168
§ 4	Proof of Mordell's conjecture	183
§ 5	Siegel's Theorem on integer points	198

Chapter VI: COMPLEMENTS TO MORDELL (Gerd Faltings)

§ 1	Introduction	204
§ 2	Preliminaries	206
§ 3	The Tate conjecture	211
§ 4	The Shafarevich conjecture	214
§ 5	Endomorphisms	217
§ 6	Effectivity	223

Chapter VII: INTERSECTION THEORY ON ARITHMETIC SURFACES (Ulrich Stuhler)

§ 0	Introduction	229
§ 1	Hermitian line bundles	233
§ 2	Arakelov divisors and intersection theory	244
§ 3	Volume forms on $\mathrm{IRI}(X, \mathcal{L})$	251
§ 4	Riemann Roch	260
§ 5	The Hodge index theorem	264

Appendix:**NEW DEVELOPMENTS IN DIOPHANTINE
AND ARITHMETIC ALGEBRAIC GEOMETRY**
(Gisbert Wüstholz)

§ 1	Introduction	270
§ 2	The transcendental approach	271
§ 3	Vojta's approach	278
§ 4	Arithmetic Riemann-Roch Theorem	281
§ 5	Applications in Arithmetic	288
§ 6	Small sections	292
§ 7	Vojta's proof in the number field case	294
§ 8	Lang's conjecture	296
§ 9	Proof of Faltings' theorem	298
§ 10	An elementary proof of Mordell's conjecture	303
§ 11	ℓ -adic representations attached to abelian varieties	307
