

CONTENTS

Preface

Conference Participants

Part I : Diffusion Processes and General Stochastic Flows on Manifolds

Stability and equilibrium properties of stochastic flows
of diffeomorphisms

P. BAXENDALE 3

Stochastic flows on Riemannian manifolds

K.D. ELWORTHY 37

Part II: Special Flows and Multipoint Motions

Isotropic stochastic flows

R.W.R. DARLING 75

The existence of isometric stochastic flows for Riemannian
Brownian motions

M. LIAO 95

Time-reversal of solutions of equations driven by Lévy processes

P. SUNDAR 111

Birth and death on a flow

E. ÇINLAR and J.S. KAO 121

Part III: Infinite Dimensional Systems

Lyapunov exponents and stochastic flows of linear and affine
hereditary systems

S.E.A. MOHAMMED 141

Convergence in distribution of Markov processes generated
by i.i.d. random matrices

A. MUKHERJEA 171

Part IV: Invariant Measures in Real and White Noise-Driven Systems

Remarks on ergodic theory of stochastic flows and control flows
F. COLONIUS and W. KLIEMANN 203

Stochastic bifurcation: instructive examples in dimension one
L. ARNOLD and P. BOXLER 241

Lyapunov exponent and rotation number of the linear
harmonic oscillator
M. PINSKY 257

The growth of energy of a free particle of small mass with
multiplicative real noise
V. WIHSTUTZ 269

Part V: Iterated Function Systems

Iterated function systems and multiplicative ergodic theory
L. ARNOLD and H. CRAUEL 283

Weak convergence and generalized stability for solutions
to random dynamical systems
J. ELTON and J. EZZINE 307

Random affine iterated function systems: mixing and encoding
M. BERGER 315
