Barcelona Budapest

CONTENTS

Preface	xv
Acknowledgements	xvii
Part I. The Classical Techniques of Wave Analysis	1
1 Complex Variable Theory	
<i>F.G. Leppington</i>	3
1.1 Complex Numbers	3
1.2 Exponential, Hyperbolic and Trigonometric Functions	7
1.3 Many-Valued Functions	10
1.4 Differentiation	16
1.5 Series Expansions	19
1.6 Integration	23
1.7 The Cauchy Integral	37
1.8 Analyticity	39
2 Generalized Functions	
<i>J.E. Ffowcs Williams</i>	46
2.1 Introduction	46
2.2 The Two-Dimensional Delta Function	56
2.3 The Three-Dimensional Delta Function	58
2.4 Convolution Algebra	59
2.5 Development of Integral Equations	66
2.6 The Simple Harmonic Oscillator	71
2.7 Green Functions for the Wave Equation	73
2.8 The Bending Wave Equation	75
2.9 The Reduced Wave Equation	76
2.10 Sound Waves with Damping	78
2.11 Internal Waves	79
3 Fourier Transforms, Random Processes, Digital Sampling and Wavelets	
<i>A.P. Dowling</i>	80
3.1 Definitions and Formal Properties of Fourier Transforms	80

3.2	Transforms of Generalized Functions	88
3.3	Random Processes	94
3.4	Digital Sampling	104
3.5	Wavelets	116
4	Asymptotic Evaluation of Integrals	
	<i>F.G. Leppington</i>	124
4.1	Introduction	124
4.2	Watson's Lemma	128
4.3	Rapidly Oscillatory Integrals	130
4.4	Integrals with a Large Exponent	134
4.5	Diffraction Integrals	145
5	Wiener-Hopf Technique	
	<i>F.G. Leppington</i>	148
5.1	Introduction	148
5.2	Wiener-Hopf Procedure for Vibrating String Problem	151
5.3	Wiener-Hopf Procedure for Integral Equation	155
5.4	Properties of Wiener-Hopf Decompositions.	157
5.5	Diffraction by Semi-infinite Rigid Plate: Sommerfeld Problem	163
6	Matched Asymptotic Expansions Applied to Acoustics	
	<i>D.G. Crighton</i>	168
6.1	Introduction	168
6.2	Heuristic Approach to Matching and its Pitfalls	169
6.3	Formal Approach to Matching	173
6.4	Sound Generation by Forced Oscillations	179
6.5	Plane Wave Scattering	184
6.6	Higher Approximations	187
6.7	Two-Dimensional Problems: Logarithmic Gauge Functions	193
6.8	Purely Logarithmic Gauge Functions: Scattering by Soft Bodies	200
6.9	Composite Expansions	204
6.10	Conclusions	207
7	Multiple Scales	
	<i>A.P. Dowling</i>	209
7.1	The Damped Harmonic Oscillator	209
7.2	The Effect of a Gradual Sound-Speed Variation on Plane Waves	214
7.3	Comparison with the WKB Method	219
7.4	Ray Theory	222

8	Statistical Energy Analysis	
	<i>M. Heckl</i>	233
8.1	Introduction	233
8.2	Power Flow Between Two Resonators	234
8.3	Power Flow in Multi-Modal Systems	236
8.4	Thermodynamic Analogy	253
8.5	Applications	255
8.6	Limits of Applicability	258
9	Mean Energy and Momentum Effects in Waves	
	<i>M. Heckl</i>	260
9.1	Introduction	260
9.2	Hamilton's Principle and the Wave Equation	261
9.3	Sound Intensity in Gases and Liquids	266
9.4	Intensity of Waves in Solids	276
9.5	Mean Momentum and Wave Drag	278
10	Numerical Methods	
	<i>M. Heckl</i>	283
10.1	Introduction	283
10.2	Finite-Element Methods (FEM) in Acoustics	283
10.3	Boundary Element Methods (BEM)	287
10.4	Source Substitution Methods	291
10.5	Applications of Fourier Transforms	297
10.6	Ray Tracing	302
10.7	Concluding Remarks	309
	Part II. The Generation of Unsteady Fields	311
11	Noise Source Mechanisms	
	<i>J.E. Ffowcs Williams</i>	313
11.1	The Equations of Fluid Motion	313
11.2	Wave Equation for Compressible Fluids	318
11.3	Inhomogeneous Wave Equation	319
11.4	Monopole and Multipole Sources	319
11.5	Dipole Sources	320
11.6	Quadrupole Sources	321
11.7	The Flow Noise Equations	322
11.8	Sound and Pseudo-Sound	323
11.9	Sound Induced by Convected Turbulence	325
11.10	Boundary Effects on Flow Noise	334
11.11	Surface Effects as a Problem in Diffraction	342
11.12	The Infinite Plane	343

11.13	The Rigid Sphere	346
11.14	A Semi-Infinite Plane	348
11.15	Scattering by a Wedge	351
11.16	Scattering by a Rigid Disc	352
12	Vortex Sound	
	<i>A.P. Dowling</i>	355
12.1	Sound Radiation by a Compact Turbulent Eddy in an Unbounded Space	355
12.2	Howe's Acoustic Analogy	360
12.3	A Line Vortex Near a Semi-Infinite Rigid Plane	367
12.4	Vortex Sound Near a Cylinder	370
12.5	Vortex Sound Near Compact Bodies	373
13	Thermoacoustic Sources and Instabilities	
	<i>A.P. Dowling</i>	378
13.1	Introduction to Thermoacoustic Sources	378
13.2	Combustion Noise	381
13.3	The Diffusion of Mass and Heat	389
13.4	Acceleration of Density Inhomogeneities.	390
13.5	Turbulent Two-Phase Flow	391
13.6	Thermoacoustic Instabilities	399
	Appendix	404
14	Effects of Motion on Acoustic Sources	
	<i>A.P. Dowling</i>	406
14.1	Effects of Motion on Elementary Sources	406
14.2	Taylor's Transformation	415
14.3	Howe's Method	419
14.4	The Method of Matched Asymptotic Expansions	422
14.5	The Lighthill Theory	425
15	Propeller and Helicopter Noise	
	<i>J.E. Ffowcs Williams</i>	428
15.1	Introduction	428
15.2	Spectral Decomposition	430
15.3	Time Domain Methods	436
15.4	Broad-Band Propeller Noise	437
15.5	The Sound of Point Sources in Circular Motion	439
16	Flow Noise on Surfaces	
	<i>A.P. Dowling</i>	452
16.1	The Surface Pressure Spectrum on a Rigid Plane Wall	452

16.2	Surface Curvature	466
16.3	Flexible Surfaces	473
16.4	Mean Flow Effects	485
16.5	Scattering from the Convective Peak to Low Wavenumbers	492
16.6	The Rôle of Surface Shear Stress	501
16.7	Summary	504
17	Fluid-Loading Interaction with Vibrating Surfaces	
	<i>D.G. Crighton</i>	510
17.1	Introduction	510
17.2	The Different Rôles of Fluid Loading	511
17.3	Intrinsic Fluid-Loading Parameter	520
17.4	The Free Waves on a Fluid-Loaded Plate	521
	Part III. Wave Modification	525
18	Scattering and Diffraction	
	<i>F.G. Leppington</i>	527
18.1	Basic Equations	527
18.2	Exact Solutions	530
18.3	Approximate Solutions	538
18.4	Matched Asymptotic Expansions: Duct Problem	544
19	Inverse Scattering	
	<i>F.G. Leppington</i>	550
19.1	Introduction	550
19.2	Method of Imbriale & Mittra	553
19.3	Optimization Method	558
19.4	High-Frequency Limit	561
20	Resonators	
	<i>M. Heckl</i>	565
20.1	Introduction	565
20.2	Single Degree of Freedom Systems	566
20.3	Multi Degree of Freedom Systems	580
20.4	Continuous, Resonating Systems	586
21	Bubbles	
	<i>D.G. Crighton</i>	595
21.1	Introduction	595
21.2	Motion of a Single Bubble	596
21.3	Sound Speed in Bubbly Liquid – Low Frequencies	600
21.4	Sound Speed in Bubbly Liquid – Dispersive Effects	602
21.5	Nonlinear Waves in Bubbly Liquid	606

22	Reverberation	
	<i>M. Heckl</i>	610
22.1	Introduction	610
22.2	Decay of Resonances in Systems with Few Modes	610
22.3	Reverberation in Systems with Many Modes (e.g. Large Rooms)	612
22.4	Examples of Sound Absorbers	620
22.5	Sound Fields in Large Rooms	625
22.6	Reverberation Caused by Many Scatterers	628
23	Solitons	
	<i>D.G. Crighton</i>	631
23.1	Introduction	631
23.2	Water Waves; Linear Theory	634
23.3	Fourier Transform Solution of Initial-Value Problem	635
23.4	Weakly Nonlinear Theory	637
23.5	The Korteweg–de Vries Equation	639
23.6	Inverse Spectral Transform	640
23.7	Direct Spectral or Scattering Problem	641
23.8	Time Evolution of the Spectral Data	642
23.9	Inverse Spectral Problem	643
24	Nonlinear Acoustics	
	<i>D.G. Crighton</i>	648
24.1	Introduction	648
24.2	Linear Local Behaviour, Nonlinear Cumulative Behaviour	649
24.3	Characteristic Solution for Simple Waves	654
24.4	The Fubini Solution	657
24.5	Multi-Valued Waveforms and Shock Waves	658
24.6	Thermoviscous Diffusion – The Burgers Equation	661
24.7	Shock-Wave Structure	663
24.8	The Fay Solution	665
24.9	Effects of Area Change	668
25	Chaotic Dynamics and Applications in Acoustics	
	<i>D.G. Crighton</i>	671
25.1	Introduction	671
25.2	Sensitivity to Initial Conditions	675
25.3	The Period-Doubling Route to Chaos	677
25.4	Other Routes to Chaos	686
25.5	Characterization of Chaos	692
25.6	Summary	702

26 Anti-Sound	
<i>J.E. Ffowcs Williams</i>	705
26.1 Introduction	705
26.2 One-Dimensional Waves	708
26.3 One-Dimensional Waves Between Two Coherent Sources	711
26.4 One-Dimensional Anti-Sound	713
26.5 The Optimal Physically Realizable Controller	719
Subject Index	727
