

CONTENTS

1 Computer Vision: Shape Detection

1.1 Why Computer Vision?	1
1.1.1 Industrial Applications	2
1.1.2 Medical Applications	2
1.1.3 Social Applications	3
1.1.4 Military Applications	3
1.2 Why This Book?	3
1.3 Why the Hough Transform?	5
1.4 Representing Shape Symbolically	5

2 Transforms Without Tears

2.1 Beginning to See	20
2.2 What about Shape?	25
2.3 Tackling the Maths	31
2.4 Beginning to Compute	35

3 Preprocessing

3.1 The Real World	39
3.2 Spot the Difference	40
3.3 Convolution, a Necessary Tool	42
3.4 Edge Detection	47
3.5 Which Parametrisation?	55
3.6 Getting Started	57
3.7 Quantization	60
3.8 Test Images	63

4 Postprocessing

4.1 Results of the Transformation	66
4.2 The Butterfly Filter	70
4.3 Designer Butterflies	74
4.4 Putting Things to Work	75
4.5 Reconstruction	77
4.6 Summary	79

5 Representing Shape

5.1 From Lines to Circles	84
5.2 Double Houghing	85
5.3 Towards a Representation of Shape	88
5.3.1 Decomposition	88
5.3.2 Geometric and Spatial Relations	94
5.3.3 Saliency	98
5.3.4 Invariance	102
5.3.5 Stability	107
5.3.6 Accessibility	111
5.4 Summary	111

6 Which Hough?

6.1 Background	115
6.1.1 Historical	115
6.1.2 Whole Shape Detection	116
6.2 Refinements	118
6.2.1 Preprocessing Considerations	118
6.2.2 Postprocessing Considerations	119
6.3 Software Solutions	121
6.3.1 Computer Friendly Algorithms	121
6.3.2 Dynamically Quantised Accumulators	122
6.3.3 Constraints on Parameter Calculation	122
6.3.4 Parameter Space Decomposition	123
6.3.5 Segmenting the Image	124
6.4 Parallel Processing	124
6.4.1 SIMD Implementations	125
6.4.2 MIMD Implementations	126
6.5 Dedicated Hardware	126
6.6 The Probabilistic Houghs: A Review	126

7 A Case Study: Circles and Ellipses

7.1 Preprocessing the Image Data	138
7.2 The Dynamic Generalized Hough Transform	142
7.2.1 Connectivity Detection	142
7.2.2 Segmentation	144
7.2.3 Sampling of Data Points	148
7.2.4 Calculating the Parameters	148
7.2.5 Accumulation of the Parameters	151
7.2.6 Statistical Information and a Robust Stopping Criterion	152
7.2.7 Removal of Features from the Image	159

7.3 A Case Study	160
7.3.1 Edge Intensity Threshold and Connectivity Detection	160
7.3.2 Segmentation	160
7.3.3 Automatic Stopping Criterion	160
7.3.4 Results	163
7.3.5 Coping with the Unexpected	163
7.4 Discussion	170
7.5 Conclusions	172
Appendix 1	173
1.1 The Radon Transform	174
1.2 Generalized Function Concentrated on a Line	174
1.3 The General Case	175
1.4 Application to an Ellipse	179
Appendix 2	181
Appendix 3	183
Appendix 4	184
References	187
Index	199
