Preface	v
CHAPTER 1	
Magneto-Optic Effects in Non-Centroantisymmetrical Antiferromagnetic Crystals	1
1.1. Symmetry of the Optical Properties of Magnetically Ordered Crystals	2
1.2. Symmetry of the Linear Magneto-Optic Effect (LMOE)	6
1.3. Light Polarization Transformation at Magneto-Optic Effects, and Specific Features of Experimental Methods	23
1.4. Experimental Investigations of the Linear Magneto-Optic Effect	33
1.4.1. The Linear Magneto-Optic Effect in Cobalt Carbonate	34
1.4.2. Reduction of the Optical Class of Tetragonal Antiferromagnetic Cobalt Fluoride in a Longitudinal Magnetic Field	43
1.4.3. Orthorhombic Noncollinear (Canted) Antiferromagnetic DyFeO ₃ ..	49
1.4.4. The Linear Magneto-Optic Effect in Other Antiferromagnetic Crystals	57
1.5. Magnetic Gyrotropy Quadratically Dependent on Magnetic Field Strength	59
CHAPTER 2	
Magneto-Optical Methods for Investigating the Structure of Antiferromagnetically Ordered Crystals	67
2.1. Visualization of Collinear or 180-Degree Antiferromagnetic Domains	67
2.1.1. Antiferromagnetic Domains in a Tetragonal Cobalt Fluoride	69
2.1.2. The Magnetic Phase Transition in Cobalt Fluoride Induced by a Magnetic Field $H \parallel C_4$	83
2.2. Magnetic Structure of the Antiferromagnetic Calcium–Manganese–Germanium (CaMnGe) Garnet	86
2.2.1. The Magnetic Point Symmetry of Manganese–Germanium Garnet	86
2.2.2. Magneto-Optical Observation of Crystalline Twins	92
2.3. The Antiferromagnetic Domains and Two-Phase Magnetic Structures in DyFeO ₃	96
2.3.1. Antiferromagnetic Domains	100
2.3.2. The Incoherent Two-Phase Domain Structure	104
2.3.3. Coherent Two-Phase Domain Structures	107

CHAPTER 3

Optical Magnetic Excitations	111
3.1. The Exciton Description of Magnetic Excitations	114
3.2. The Mechanism of Magnetic Excitation Generation by Light	120
3.2.1. One-Particle Processes (Magnetic Dipole Absorption and Emission)	120
3.2.2. Multiparticle Processes (Electric Dipole Absorption and Emission)	121
3.2.3. Bonded States	130
3.2.4. Parametric Excitation by Optical Pumping	132
3.2.5. An Estimate of Some Parameters of Optical Excitations	134
3.3. Multiquantum Excitation of Two-Particle Transitions	137
3.3.1. Multiquantum Absorption of Light	137
3.3.2. Two-Exciton Absorption of Light in the Case of Four-Quantum Excitation	140
3.3.3. Influence of Statistical Properties of Light on Two-Exciton Four-Photon Absorption	143
3.4. Dynamics of Magnetic Excitons	145
3.4.1. Transfer of Electron Excitation Energy	145
3.4.2. Character of Exciton Motion	147
3.4.3. Coherent Excitons	149
3.4.4. Noncoherent Magnetic Excitons	150
3.4.5. Change of Exciton Mobility at Inducing Intersublattice Transitions	153
3.5. Radiation Decay of Magnetic Excitons	156
3.5.1. The Increase of Exciton-Magnon Luminescence in a Magnetic Field	156
3.5.2. Enhancement of Exciton Radiation Transition	158
3.5.3. Biexciton Annihilation	161

CHAPTER 4

Magnetic Excitons as a Method of Study of the Magnetic Properties of Antiferromagnets	165
4.1. Spectroscopic Studies of Spin Waves	165
4.1.1. Three-Dimensional Magnetic Crystals. Energy of Magnons at the Boundary of the Brillouin Zone	165
4.1.2. Low-Dimensional Magnetic Crystals. Magnon Energies Inside the Brillouin Zone	167
4.1.3. Impurity Modes	172
4.2. Magnetic Excitons as an Instrument to Investigate the Magnetic Configurations of Antiferromagnets	173
4.2.1. Equilibrium Structures	173
4.2.2. Phase Transitions in an Antiferromagnet with Anisotropy of "Easy-Axis" Type	177
4.3. Photoinduced Magnetic Effects	186
4.3.1. ErCrO_3 . Spin-Reorientation Phase Transitions	187
4.3.2. EuCrO_3 . Origin of a New Magnetically Ordered Phase	188
4.3.3. MnF_2 . Photoinduced Single-Ion Magnetic Anisotropy	190

CHAPTER 5

Delocalization of Impurity Excitations in Antiferromagnetic Insulators	194
5.1. Localized States (Single-Impurity Approximation)	197
5.1.1. Theory	198
5.1.2. Experimental Data and Their Interpretation	208
5.2. Localization and Delocalization States in the Anderson and Lifshitz Models	218
5.2.1. The Anderson Model	219
5.2.2. The Lifshitz Model	222
5.3. Coherent and Incoherent Impurity Excitations. Impuritons	224
5.3.1. Electron Excitations in the Presence of Large-Radius Impurity States. Theory	224
5.3.2. Rearrangement of the Spectrum of Spin Excitations in an Antiferromagnet with Magnetic Impurities in an External Magnetic Field. Magnetic Impuritons	230
5.3.3. Experimental Studies of Magnetic Impuritons ($\text{CoF}_2 + c \text{ Mn}$)	239
5.3.4. Orthogonal- and Collinear-Type Impurities in $\text{CoCO}_3 + \text{Fe} + \text{Mn} + \text{Ni}$	245
5.3.5. Magnetic Impuritons Near the Top of a Magnon Band ($\text{FeF}_2 + \text{Co}$)	248
