1	Introduction	1
1.1	Motivation and Aims	1
1.2	Thesis Structure and Overview	3
	References	4
2	Fundamentals of Probability Theory	7
2.1	Random Variables	7
2.1.1	Specifying a Random Variable	7
2.1.2	Functions of a Random Variable	11
2.1.3	Multiple Random Variables	11
2.2	Random Processes	16
2.2.1	Specifying a Random Process	16
2.2.2	Stationarity and Ergodicity	16
2.2.3	Spectral Analysis of a Random Process	18
2.3	Some Important Types of Statistics	19
2.3.1	Poisson Statistics	20
2.3.2	Gaussian Statistics	22
2.4	Conclusions	23
	References	24
3	Information and Estimation Theory	27
3.1	Introduction	27
3.2	Maximum Likelihood Estimation	29
3.2.1	Definition	29
3.2.2	Properties of the Maximum Likelihood Estimator	31
3.3	Cramér-Rao Lower Bound	35
3.3.1	Functions of Parameters and Nuisance Parameters	37
3.3.2	Informational Metrics	37
3.3.3	MLE Versus Other Estimators	38

3.4	Constrained Maximum Likelihood Estimation	39
3.4.1	Constrained Cramér-Rao Lower Bound	41
3.5	Bayesian Estimation	42
3.6	Conclusions	44
	References	44
4	Vectorial Optics	47
4.1	Electromagnetism and Optics	47
4.2	Polarisation of Light	49
4.2.1	Lissajous Diagrams and the Polarisation Ellipse	51
4.2.2	Jones Vectors	51
4.2.3	Coherency Matrices	53
4.2.4	Stokes Vectors	55
4.2.5	The Poincaré Sphere	57
4.2.6	Stokes Space	57
4.3	Jones and Mueller Polarisation Algebras	58
4.4	Vectorial Ray-Tracing	62
4.5	Focusing of Vectorial Beams	62
4.5.1	Scaled Debye-Wolf Diffraction Integral	63
4.5.2	Focusing of Partially Polarised, Partially Coherent Light	69
4.5.3	Examples	76
4.6	Conclusions	81
	References	82
5	Information in Polarimetry	87
5.1	Polarimetry	87
5.1.1	Stokes Polarimetry	88
5.1.2	Mueller Polarimetry	89
5.2	Polarisation Resolution	90
5.2.1	Polarisation Encoding and Degrees of Freedom	92
5.2.2	Efficiency of Observation	93
5.2.3	Examples	95
5.2.4	Channel Capacity and Detector Numbers	100
5.3	Optimisation of Polarimeters	101
5.3.1	Examples	103
5.3.2	Extension of Optimisation Results	108
5.4	Noise Propagation in Lu–Chipman Decomposition	109
5.4.1	Single Element Systems	109
5.4.2	Composite Systems	110
5.5	Conclusions	112
	References	113

6	Information in Polarisation Imaging	117
6.1	Introduction	117
6.2	Eigenfunction Expansion of the Debye-Wolf Diffraction Integral	118
6.2.1	Derivation of the Eigenfunction Expansion	119
6.2.2	Properties of the Eigenfunction Expansion	122
6.2.3	Numerical Examples	124
6.3	Inversion of the Debye-Wolf Diffraction Integral	127
6.3.1	Some Notes on Inversion	129
6.3.2	Examples	132
6.4	Polarisation Microscopy	138
6.4.1	Fisher Information in Microscopy	138
6.4.2	Examples	141
6.5	Physical Constraints in Vectorial Imaging	154
6.6	Conclusions	157
	References	159
7	Multiplexed Optical Data Storage (MODS)	163
7.1	Electromagnetic Scattering Calculations	164
7.1.1	System Description	165
7.1.2	Mode Expansion Theory	166
7.2	Optical Disc Readout: Numerical Results	172
7.2.1	Field Distributions Within the Data Pit	172
7.2.2	Properties of the Scattered Field	174
7.3	Optimal Pit Geometry	178
7.4	Conclusions	180
	References	181
8	Single Molecule Studies	183
8.1	Introduction	183
8.2	Photon Statistics in Single Molecule Orientational Imaging	184
8.2.1	Signal-to-Noise Considerations	184
8.2.2	Probability Density Function of the Number of Detected Photons	186
8.2.3	Probability Density Function of Time Averaged Intensity	187
8.2.4	Three Dimensional Dipole Wobble	192
8.2.5	Discussion	193
8.3	Longitudinal Dipole Orientation and Field Mapping	194
8.3.1	Description of System	194
8.3.2	System Tolerances	198
8.4	Conclusions	202
	References	202

9 Conclusions 205
