Iteration Theories

The Equational Logic
of Iterative Processes

Springer-Verlag
Berlin Heidelberg New York
London Paris Tokyo
Hong Kong Barcelona
Budapest

Contents

Preface	vii
Introduction	1
1 Mathematical Motivation	1
2 Why Iteration Theories?	4
3 Suggestions for the Impatient Reader	5
4 A Disclaimer	6
5 Numbering	6
1 Preliminary Facts	7
1 Sets and Functions	7
2 Posets	9
3 Categories	9
4 2-Categories	15
4.1 $\text{Cell}_{\mathcal{C}}$ is a 2-Category, Too	19
5 Σ -Trees	20
2 Varieties and Theories	23
1 Σ -Algebras	23
2 Terms and Equations	25
3 Theories	29
4 The Theory of a Variety	41
3 Theory Facts	47
1 Pairing and Separated Sum	47

2	Elementary Properties of TH	51
3	Theories as $N \times N$ -Sorted Algebras	53
4	Special Coproducts.....	56
5	Matrix and Matricial Theories.....	63
5.1	Matrix Theories	63
5.2	Theories of Relations	71
5.3	Matricial Theories	72
5.4	Sequacious Relations	78
5.5	Sequacious Functions	80
6	Pullbacks and Pushouts of Base Morphisms	81
7	2-Theories	87
4	Algebras	93
1	T -algebras	93
1.1	An Example: Algebras of Matrix Theories	97
2	Free Algebras in T^b	100
2.1	The T -algebras T_n	100
2.2	Infinitely Generated Free Algebras in T^b	103
3	Subvarieties of T^b	105
4	The Categories TH and VAR	107
5	Notes.....	111
5	Iterative Theories	113
1	Ideal Theories	113
2	Iterative Theories Defined.....	118
3	Properties of Iteration in Iterative Theories.....	124
4	Free Iterative Theories.....	140
5	Notes.....	157
6	Iteration Theories	159
1	Iteration Theories Defined	159
2	Other Axiomatizations of Iteration Theories	162
2.1	Scalar Axiomatizations	166
3	Theories with a Functorial Dagger	175
4	Pointed Iterative Theories.....	184
5	Free Iteration Theories.....	191

6	Constructions on Iteration Theories	194
7	Feedback Theories	204
8	Summary of the Axioms	210
8.1	Axioms for Iteration Theories	210
8.2	Axioms for Conway Theories	212
9	Notes	213
7	Iteration Algebras	215
1	Definitions	215
2	Free Algebras in $T^\dagger$	218
3	The Retraction Lemma	220
4	Some Categorical Facts	222
5	Properties of $T^\dagger$	225
6	A Characterization Theorem	230
7	Strong Iteration Algebras	235
8	Notes	241
8	Continuous Theories	243
1	Ordered Algebraic Theories	243
1.1	Free Ordered Theories	246
2	ω -Continuous Theories	248
2.1	Free ω -Continuous Theories	249
3	Rational Theories	254
4	Initiality and Iteration in 2-Theories	257
5	ω -Continuous 2-Theories	273
5.1	The Definition, with Examples	273
5.2	Initial Algebras Exist	278
5.3	ω -Continuous 2-Theories are Iteration Theories	283
6	Notes	288
9	Matrix Iteration Theories	289
1	Notation	289
2	Properties of the Star Operation	290
3	Matrix Iteration Theories Defined	297
4	Presentations in Matrix Iteration Theories	313
5	The Initial Matrix Iteration Theory	319
6	An Extension Theorem	322

7	Matrix Iteration Theories of Regular Sets	336
8	Notes	349
10	Matricial Iteration Theories	353
1	From Dagger to Star and Omega, and Back	353
2	Matricial Iteration Theories Defined	356
3	Examples	367
3.1	SeqRel_A	367
3.2	$\mathcal{L}(X^*; X^\omega)$	370
3.3	$\mathcal{RL}(X^*; X^\omega)$	374
3.4	$\mathcal{CL}(X^*; X^\omega)$	374
3.5	$\mathcal{RCL}(X^*; X^\omega)$	375
3.6	More Commutative Identities	375
4	Additively Closed Subiteration Theories	377
4.1	An A.C. Subiteration Theory of $\mathcal{L}(X^*; X^\omega)$	385
5	Presentations in Matricial Iteration Theories	390
6	The Initial Matricial Iteration Theory	395
7	The Extension Theorem	399
8	Additively Closed Theories of Regular Languages	418
9	Closed Regular ω -Languages	427
10	Notes	447
11	Presentations	449
1	Presentations in Iteration Theories	449
2	Simulations of Presentations	456
3	Coproducts Revisited	469
4	Notes	480
12	Flowchart Behaviors	481
1	Axiomatizing Sequacious Functions	482
2	Axiomatizing Partial Functions	485
3	Diagonal Theories	489
4	Sequacious Functions with Predicates	494
4.1	The Theory of One Predicate	494
4.2	Several Binary Predicates	505
5	Partial Functions with Predicates	508
6	Notes	511

13 Synchronization Trees	513
1 Theories of Synchronization Trees	514
2 Grove Iteration Theories	521
3 Axiomatizing Synchronization Trees	533
4 Bisimilarity	540
5 Notes	549
14 Floyd-Hoare Logic	551
1 Guards	552
2 Partial Correctness Assertions.....	562
2.1 An Alternative Definition of n -Guards	564
3 The Standard Example	565
4 Rules for Partial Correctness	566
4.1 Formalization	566
4.2 Formal Rules.....	570
5 Soundness	571
6 The Standard Example, Continued	582
7 A Floyd-Hoare Calculus for Iteration Theories.....	583
8 The Standard Example, Again	585
9 Completeness	586
9.1 The Invariant Guard Property.....	586
9.2 Completeness of Floyd-Hoare Rules.....	589
9.3 Guarantees of Completeness	591
9.4 Weakest Liberal Preconditions and Completeness	594
9.5 The Cook Completeness Theorem	598
9.6 The Unwinding Property	599
10 Examples.....	601
10.1 An Example of a Correctness Proof	601
10.2 The Interpolation Property Does Not Imply the Invariant Guard Property	606
10.3 A Non-Expressive Structure with Weakest Liberal Preconditions	610
11 Notes.....	611
List of Symbols	612
Index	615
Bibliography	621
