

CONTENTS

CHAPTER ONE

BACKGROUND TO THE RESEARCH AND REVIEW OF DENSITY AND TURBIDITY CURRENT FLOW

1.1 Project rationale.....	1
1.2 Introduction to the review.....	2
1.3 The physical study of turbidity currents and turbidites.....	3
1.3.1 The definition of turbidity currents.....	3
1.3.2 The vertical sequence of sedimentary structures and facies models associated with turbidites.....	5
1.3.3 Hydrodynamic interpretations of the Bouma sequence.....	8
1.3.4 Hydraulic jumps in turbidity currents.....	12
1.3.5 Measurements from natural turbidity currents.....	14
1.4 The experimental modelling of turbidity currents.....	14
1.4.1 Experimental investigations using suspended sediment.....	14
1.4.2 Deposition of sediment.....	16
1.5 The mechanics of density current flow.....	17
1.5.1 Introduction.....	17
1.5.2 The motion of the head of a density current.....	17
1.5.2.i Theoretical considerations.....	17
1.5.2.ii Experimental investigations.....	20
1.5.3 The internal structure and mixing processes associated with the head of a density current.....	22
1.6 The reflection of turbidity currents.....	24
1.6.1 Some examples of the reversal of turbidity currents.....	24
1.6.2 Experimental studies of the reflection of density currents.....	29
1.7 The hydrodynamic studies of bore formation.....	29
1.8 Internal solitary waves: theory and experimental studies.....	34
1.8.1 Introduction.....	34
1.8.2 Surface solitary waves.....	35
1.8.3 Internal solitary waves.....	37
1.8.4 Shallow water theory.....	38
1.8.5 Deep water theory.....	41
1.8.6 Finite depth theory.....	43
1.8.7 Experimental observations of internal solitary waves.....	44
1.8.8 Other theoretical and experimental considerations.....	46
1.9 Summary.....	46

CHAPTER TWO

EXPERIMENTAL STUDY OF THE INCIDENCE OF DENSITY
CURRENTS UPON RAMPS AND OBSTACLES.

2.1 Introduction and aims.....	49
2.2 Why turbidity currents are modelled and the problem of dynamic similarity.....	49
2.3 Procedures used in the present experiments.....	50
2.3.1 Apparatus used in the present experiments.....	50
2.3.2 Flow visualisation techniques used.....	55
2.3.3 Flow analysis techniques used.....	57
2.4 Sources of error in the experiments.....	57
2.4.1 Errors encountered during experiment set-up.....	58
2.4.2 Errors encountered during the experiments.....	58
2.4.3 Errors encountered during the analysis of the experiments.....	59
2.5 Outline of experimental programme.....	59
2.5.1 Experimental rationale and notation used in the experiments.....	59
2.5.2 Summary of experiments conducted.....	60
2.6 Characteristics of the Forward Flow.....	62
2.6.1 Introduction.....	62
2.6.2 Velocity profiles of the forward flow.....	62
2.6.3 Variation in the head height.....	64
2.6.4 Controls on the velocity of advance of the head of density currents.....	64
2.6.5 Variation of the body height behind the head.....	71
2.6.6 Flow within the tail of the forward flow.....	71
2.7 Nature of the current generated by the incidence of a restricted density current upon a ramp.....	71
2.7.1 Introduction.....	71
2.7.2 Incidence of the density currents in experiments FE/1.068 and S15/1.068 on ramps of 15°.....	73
2.7.3 Flow motion at the ramp incurred by the incidence of a density current.....	80
2.7.4 Variation in the form of the reversed flow.....	84
2.7.5 Velocity profile of a type C reverse flow.....	89
2.7.6 Variation of crestal velocities of the reverse flow.....	91
2.7.7 The numbers of waves associated with a weak bore.....	95
2.7.8 Internal flow characteristics of the reversed flow.....	95
2.8 Processes involved in the generation of a reversed density current.....	105
2.8.1 Reverse flow genesis at the ramp.....	105

2.8.2	Evolution of the reverse flow	109
2.8.2.i	Recap of the evolution of the reverse flow	109
2.8.2.ii	Generation of a bore by the gravitational collapse of a denser fluid into a layered system.....	111
2.8.2.iii	The generation of bores by the intrusion of a density current underneath a layered fluid system.....	113
2.8.2.iv	Comparison of the generated bores with density current and internal solitary wave theories.....	113
2.9	The incidence of unrestricted density currents upon planar ramps.....	117
2.10	The incidence of a restricted sediment suspension current upon a planar ramp.....	125
2.11	The generation of bores during flow stripping.....	128
2.12	Summary of the experimental investigations.....	132

CHAPTER THREE

A MODEL FOR THE INCIDENCE OF GRAVITY CURRENTS ON OBSTRUCTIONS TO FLOW AND A DISCUSSION OF ITS APPLICABILITY TO MODERN AND ANCIENT TURBIDITE SYSTEMS

3.1	Introduction.....	137
3.2	A model for the incidence of density currents upon flow obstructions	137
3.2.1	Introduction.....	137
3.2.2	A simplistic model.....	138
3.2.3	Applications of the model to more complex situations.....	141
3.2.4	Velocity characteristics of the generated bores.....	141
3.3	The model with respect to turbidity current systems.....	142
3.4	Bores and recent turbidity currents	144
3.5	Bores in the Windermere Group, England	147
3.6	Concluding remarks	150
	List of references.....	153
