Contents

Contents of *Part II: Lubricated Transport, Drops and Miscible Liquids*

Preface v

Color Insert follows page 240

Chapter V. Introduction to Lubricated Pipelining 1
V.1 Nature of the Problem 1
V.2 Chronology of Experiments and Applications 3
V.3 Effects of Gravity 10
V.4 Stability Studies 11
V.5 Plan of Chapters VI - VIII, and List of Acronyms 16

Chapter VI. Lubricated Pipelining: Linear Stability Analysis 17
VI.1 Neutral Curves, Waves of Fastest Growth, Comparison with Experiments of CGH 18
VI.1 (a) Introduction 18
VI.1 (b) The Equations and Basic Flow 20
VI.1 (c) Perturbation Equations 21
VI.1 (d) Dimensionless Equations and Parameters 22
VI.1 (e) Normal Modes 24
VI.1 (f) Pseudospectral Numerical Method 28
VI.1 (g) Axisymmetric and Nonaxisymmetric Disturbances 30
VI.1 (h) Perturbation Solution for Long Waves 31
VI.1 (i) Comparison With Results of Hooper and Boyd 34
VI.1 (j) $m \to 0$ for $\mathbb{R}_1 \neq 0$ is a Singular Limit 36
VI.1 (k) The Limit $\mathbb{R}_1 \to 0$ and $m \neq 0$ 38
VI.1 (ℓ) Neutral Curves 38
VI.1 (m) Comparison with Experiments 40
VI.1 (n) Conclusions 48
VI.2 Energy Analysis of the Waves of Fastest Growth 50
VI.2 (a) Introduction 50
VI.2 (b) The Basic Flow 52
VI.2 (c) Perturbation Equations and Normal Modes 53

VI.2 (d) Finite Element Formulation 54
VI.2 (e) Energy Analysis 56
VI.2 (f) Comparison with Previous Results for Two-Layer Core-Annular Flow 59
VI.2 (g) The Viscous Core : $m < 1$ 59
VI.2 (h) The Viscous Liquid is on the Wall: $m > 1$ 65
VI.2 (i) Stability of Thin Liquid Threads 70
VI.2 (j) Stability of Core-Annular Flow in Three Layers (Hydrophobic Pipe Walls) 74
VI.2 (k) Conclusions 82
VI.2 (ℓ) Comparison with Field Data: Scale-up, Transition to Water in Oil (w/o) Emulsions 84
VI.2 (m) Stability of Rotating Core-Annular Flow 93
VI.3 Stability of Core-Annular Flow with a Small Viscosity Ratio 94
VI.3 (a) Formulation of the Problem 94
VI.3 (b) Case I: The Critical Point is Far Away from the Interface 97
VI.3 (c) Case II: The Critical Point is Close to the Interface 104
VI.3 (d) Numerical Results 108
VI.3 (e) Growth Rate and Wave Velocity 112
VI.3 (f) Conclusions 113

Chapter VII. Core-Annular Flow in Vertical Pipes 114
VII.1 Introduction 114
VII.2 Basic Flow 116
VII.3 Experiments 119
VII.3 (a) Free Fall 121
VII.3 (b) Forced Flows 122
VII.4 Disturbance Equations 127
VII.5 Numerical Method 129
VII.6 Density Stratification and Interfacial Gravity 130
VII.7 Long Waves 136
VII.8 Neutral Curves: Free Fall Under Gravity 138
VII.9 Neutral Curves: Forced Flows 145
VII.10 Conclusions on Linear Stability 152
VII.11 Notation for Sections VII.12-21 154
VII.12 Properties of Fluids Used in Experiments 155
VII.13 Experimental Set-Up and Procedures 156
VII.14 Hold-up Ratio 160
VII.15 Flow Types 164
VII.16 Flow Charts 176
VII.17 Pressure Drop Measurements 180
VII.18 Ideal and Measured Efficiency of Lubrication 183
VII.19 Friction Factor and Reynolds Number for Lubricated Pipelining 192
VII.20 Comparison of Experiments with Theory 202

VII.20 (a) For Fixed Values of V_o and V_w 202
VII.20 (b) For Fixed Values of V_o and a 209
VII.21 Summary and Discussion 221

Chapter VIII. Nonlinear Stability of Core-Annular Flow 226
VIII.1 Introduction 226
VIII.2 Nonlinear Evolution of Axisymmetric Disturbances 229
VIII.3 Multiple Scales, Wave Packets and Ginzburg-Landau Equations 235
VIII.4 Numerical Scheme 241
VIII.5 Nonlinear Stability of Core-Annular Flow 244
VIII.6 Small Capillary Numbers 251
VIII.7 Large Capillary Numbers 254
VIII.8 Experiments 255
VIII.9 Summary and Discussion of the Application of Ginzburg-Landau Equations to Core-Annular Flow 259
VIII.10 Nonlinear Amplitude Equations for Long Waves 261
VIII.11 Amplitude Equation of Hooper and Grimshaw 262
VIII.12 Rupture of Thin Films 264
VIII.12 (a) Long Waves 265
VIII.12 (b) Lubrication Theory 266
VIII.13 Amplitude Equations of Frenkel et al and Papageorgiou et al 267
VIII.14 Long-Wave Expansions for the Amplitude Equation (13.6) When $\mathbb{R}_1 = O(1)$ 271
VIII.15 Exact Stability Results for Long Waves 272
VIII.16 Comparison of Lubrication Theory with Exact Theory 278
VIII.17 Discussion 287

Chapter IX. Vortex Rings of One Fluid in Another in Free Fall 288
IX.1 Introduction 288
IX.2 Classical Vortex Rings 289
IX.3 The Normal Stress Balance 292
IX.4 Stokes Flow Around a Drop 294
IX.5 Dimensionless Parameters 299
IX.6 Physical and Other Properties 301
IX.7 Distortion of the Spherical Drop 304
IX.8 Formation of Rings 308
IX.9 Two-Fluid Systems That Do and Do Not Form Vortex Rings 313
IX.10 Effect of Drop Size and Surfactant 318

Chapter X. Miscible Liquids 324
X.1 Motivation and Problem Statement 325
X.2 Historical Introduction 334
X.3 Dynamic and Instantaneous Interfacial Tension 337
X.4 Mixtures of Incompressible Miscible Liquids and Korteweg's Theory 344

X.4 (a) Compressible Fluids 344
X.4 (b) Mixtures of Incompressible Fluids 346
X.4 (c) Diffusion Equation for Mixtures of Miscible Incompressible Fluids 349
X.4 (d) Solenoidal Fields for Simple Mixtures 351
X.4 (e) Diffusion in Simple Mixtures 357
X.4 (f) Korteweg Stresses and the Equations of Motion 359
X.5 Motionless Solutions and Steady Solutions 360
X.6 Falling Drops, Rising Bubbles and Plumes 361
X.7 Isothermal Problems 363
X.8 One-Dimensional Mixing Layer Problems 366
X.9 Jump of the Normal Stress across a Plane Mixing Layer 367
X.10 Spreading of a Spherical Diffusion Front and Korteweg Stresses 369
X.11 The Effect of Convection on Diffusion 372
X.12 Miscible Displacement in a Hele-Shaw Cell 374
X.13 Stability of Steady Miscible Displacement 379
X.14 Asymptotic Analysis of Stability 382
X.15 Growth Rates and Neutral Curves 384
X.16 Structure of Two-Dimensional Problems 389
X.17 Conclusions and Discussion 394

Appendix 396

Contents of *Part I: Mathematical Theory and Applications*

Preface
Chapter I. Introduction
I.1 Examples
I.1 (a) Fingering
I.1 (b) Lubricated Pipelining
I.1 (c) Segregation and Lubrication of Solids in Liquids
I.1 (d) Lubricated Pipelining of Solid Particulates
I.1 (e) Manufacturing
I.1 (f) Lubricated Extensional Flows: A Rheological Application
I.1 (g) Microgravity Through Density Matching
I.1 (h) Geophysical Applications
I.1 (i) Transient Flow of Two Immiscible Liquids in a Rotating Container
I.2 Formulation of Equations
I.2 (a) Transport Identities
I.2 (b) Balance of Momentum

I.2 (c) Balance of Energy
I.2 (d) Boundary Conditions
I.2 (e) Summary
I.3 Nonuniqueness of Steady Solutions
I.3 (a) Bubbles
I.3 (b) Parallel Shear Flows
I.3 (c) Two-Fluid Convection
I.3 (d) Rotating Couette Flow
I.3 (e) Nonuniqueness and Stability
I.3 (f) Nonuniqueness and Variational Principles

Chapter II. Rotating Flows of Two Liquids
II.1 Rigid Motions of Two Liquids Rotating in a Cylindrical Container
II.1 (a) Steady Rigid Rotation of Two Fluids
II.1 (b) Disturbance Equations
II.1 (c) Energy Equation for Rigid Motions of Two Fluids
II.1 (d) The Interface Potential
II.1 (e) Poincaré's Inequality and the Energy Inequality
II.1 (f) Minimum of the Potential
II.1 (g) Spatially Periodic Connected Interfaces
II.2 The Minimum Problem for Rigid Rotation of Two Fluids
II.2 (a) The Cylindrical Interface
II.2 (b) Mathematical Formulation of the Minimum Problem
II.2 (c) Analysis of the Minimum Problem
II.2 (d) Periodic Solutions, Drops and Bubbles
II.2 (e) All the Solutions with $J < 4$ Touch the Cylinder
II.3 Experiments on Rigid Rotation of Two Fluids in a Cylindrical Container
II.3 (a) Experiments with Heavy Fluid Outside – the Spinning Rod Tensiometer
II.3 (b) Experiments with Heavy Fluid Inside – Coating Flows
II.4 Experiments with Liquids on Immersed and Partially Immersed Rotating Rods. Rollers, Sheet Coatings and Emulsions
II.4 (a) Rollers
II.4 (b) Sheet Coatings
II.4 (c) Fingering Instabilities and the Formation of Emulsions
II.4 (d) Centrifugal Instabilities
II.5 Taylor-Couette Flow of Two Immiscible Liquids
II.5 (a) Experiments and Parameters
II.5 (b) Circular Couette Flows
II.5 (c) Rollers
II.5 (d) Emulsions, Tall Taylor Cells, Cell Nucleation
II.5 (e) Phase Inversion
II.5 (f) Phase Separation
II.5 (g) Phase Inversion and Phase Separation

II.5 (h) Chaotic Trajectories of Oil Bubbles in an Unstable Water Cell
II.6 Two-Dimensional Cusped Interfaces
II.6 (a) Introduction
II.6 (b) Experiments
II.6 (c) Theory
II.6 (d) Numerical Results
II.6 (e) Conclusions

Chapter III. The Two-Layer Bénard Problem
III.1 Introduction
III.2 Formulation of Equations
III.3 Linearized Stability Problem
III.3 (a) Governing Equations
III.3 (b) The Adjoint Equations
III.3 (c) Numerical Scheme
III.3 (d) Example of Hopf Bifurcation
III.4 Asymptotic Analysis for Long Waves
III.5 Asymptotic Analysis for Short Waves
III.6 Liquids with Similar Properties
III.6 (a) Close to Criticality for One Fluid
III.6 (b) Low Rayleigh Numbers
III.6 (c) Summary
III.7 Nonlinear Bifurcation Analysis
III.7 (a) Problem in Finite Dimension
III.7 (b) Reduction to Finite Dimension
III.7 (c) Transformation to Birkhoff Normal Form
III.7 (d) Results and Discussion

Chapter IV. Plane Channel Flows
IV.1 Introduction
IV.2 Governing Equations for Two-Layer Couette Flow
IV.3 Squire's Theorem
IV.4 Asymptotic Analysis for Long Waves
IV.4 (a) Two-Layer Couette Flow
IV.4 (b) Two-Layer Couette-Poiseuille Flow
IV.4 (c) Two-Layer Semi-Infinite Couette Flow
IV.5 Asymptotic Analysis for Short Waves
IV.6 Asymptotic Analyses for:
IV.6 (a) The Thin-Layer Effect
IV.6 (b) High Reynolds Numbers
IV.7 Analysis of Stability in the General Case: Energy Equation
IV.8 Nonlinear Analysis
IV.8 (a) Weakly Nonlinear Amplitude Equations for Long Waves
IV.8 (b) Bifurcation Analysis

IV.9 Two-Layer Couette Flow of Upper-Convected Maxwell Liquids
IV.9 (a) Governing Equations
IV.9 (b) Asymptotic Analysis for Short Waves
IV.9 (c) Numerical Study of the Spectrum
IV.9 (d) Wet Slip and Extrudate Sharkskin Formation
IV.10 Liquid-Vapor Films between Heated Walls
IV.10 (a) Governing Equations and Interface Conditions for Two-Phase Flow of Vapor and Liquid
IV.10 (b) Governing Equations for the Inclined Channel
IV.10 (c) Basic Flow
IV.10 (d) Equations for Linear Stability Analysis
IV.10 (e) Dimensionless Variables and Normal Modes
IV.10 (f) Two Different Interfacial Temperature Conditions
IV.10 (g) Energy Analysis
IV.10 (h) Horizontal Case
IV.10 (i) Vertical Case
IV.10 (j) Conclusions
