

Contents

1	INTRODUCTION	1
1.1	Features of Teletraffic Systems	1
1.2	Modeling of Teletraffic Systems	3
1.2.1	Traffic Load	3
1.2.2	Call Origination Process	4
1.2.3	Service Time Distribution	5
1.2.4	Classification of Traffic Models	6
1.3	Fundamental Relations	7
1.3.1	Markov Property	7
1.3.2	PASTA	8
1.3.3	Little Formula	9
	Exercises	12
2	MARKOVIAN MODELS	13
2.1	Markovian Loss Systems	13
2.1.1	M/M/s(0)	13
2.1.2	Statistical Equilibrium	15
2.1.3	M(n)/M/s(0)	16
2.1.4	State Probabilities at Call Arrival	18
2.1.5	Blocking Probability	19
2.1.6	Ordered Trunk Hunting	24
2.2	Markovian Delay Systems	25
2.2.1	M/M/s	25
2.2.2	Mean Waiting Time	27
2.2.3	Waiting Time Distribution	28
2.3	Extended Markovian Models	31
2.3.1	Birth-Death Process	31
2.3.2	M(n)/M/s(m, ξ)	32
2.3.3	M/M/s(m, ξ)	33
2.3.4	M(n)/M/s	33
2.3.5	M/M/s(m)	35
	Exercises	38

3	NON-MARKOVIAN MODELS	39
3.1	Renewal Process	39
3.1.1	Residual Time Distribution	39
3.1.2	Mean Residual Time	41
3.1.3	Rate Conservation Law	42
3.2	Poisson Input General Service Time Models	43
3.2.1	M/G/1	43
3.2.2	Embedded Markov Chain	44
3.2.3	State Probability at Call Departure	45
3.2.4	Waiting Time Distribution	47
3.2.5	M/G/1(m)	48
3.3	Poisson Input Constant Service Time Model	51
3.3.1	M/D/ s	51
3.3.2	State Probability Generating Function	52
3.3.3	Mean Waiting Time	53
3.3.4	Waiting Time Distribution	55
3.4	Renewal Input Exponential Server Models	58
3.4.1	GI/M/ $s(0)$	58
3.4.2	Blocking Probability	59
3.4.3	GI/M/ s	60
3.4.4	Waiting Time Distribution	61
3.4.5	Derivation of Boundary Probability	62
3.5	Renewal Input Single Server Models	63
3.5.1	Spectral Solution for GI/G/1	63
3.5.2	H ₂ /G/1	66
3.5.3	E _k /G/1	68
	Exercises	70
4	MULTI-CLASS INPUT MODELS	71
4.1	Batch Arrival Models	71
4.1.1	M ^[X] /M/ $s(0)$	71
4.1.2	M ^[X] /G/1	75
4.1.3	GI ^[X] /G/1	79
4.2	Priority Models	80
4.2.1	Non-Preemptive Priority Model	80
4.2.2	Preemptive Priority Model	82
4.2.3	Work Conservation Law	84
4.3	Multi-Dimensional Traffic Models	86
4.3.1	Multi-Dimensional Traffic	86
4.3.2	Trunk Reservation System	89
4.3.3	Individual Performance Measures	91
4.4	Mixed Loss and Delay Systems	93
4.4.1	M ₁ +M ₂ /M/ $s(0, \infty)$	93
4.4.2	GI+M/M/ $s(\infty, 0)$	96
4.4.3	GI+M/M/ $s(0, \infty)$	97

4.5	Multi-Queue Models	99
4.5.1	Modeling of Multi-Queue	99
4.5.2	Exhaustive Model	101
4.5.3	Gated Model	102
4.5.4	Limited Model	103
	Exercises	104
5	ALTERNATIVE ROUTING SYSTEMS	105
5.1	Overflow System	105
5.1.1	Overflow Traffic Model	105
5.1.2	Moment and LST of Overflow Process	107
5.1.3	Mean and Variance of Overflow Calls	108
5.2	Approximate Methods for Overflow Systems	109
5.2.1	Equivalent Random Theory	109
5.2.2	Interrupted Poisson Process	111
5.2.3	GI Approximation	112
5.3	Optimum Design of Alternative Routing	113
5.3.1	Conventional Method	113
5.3.2	Given Blocking Probability	115
5.3.3	Trunk Reservation Scheme	117
5.4	Numerical Analysis of State Equations	119
5.4.1	State Equation for Alternative Routing	119
5.4.2	Gauss-Seidel Iteration	120
5.4.3	Solution for Trunk Reservation Scheme	122
	Exercises	124
6	ADVANCED TELETRAFFIC MODELS	125
6.1	Renewal Input Multi-Server Model	125
6.1.1	Diffusion Model	125
6.1.2	Modified Diffusion Approximation	127
6.1.3	GI/G/s	128
6.2	PH-MRP Input Models	129
6.2.1	Phase-Type Markov Renewal Process	129
6.2.2	PH-MRP/M/s(m)	130
6.2.3	$M + PH-MRP/M_1, M_2/s(\infty, 0)$ PPP(n)	133
6.2.4	Special Cases	136
6.3	MMPP Input Model	137
6.3.1	Markov Modulated Poisson Process	137
6.3.2	MMPP/G/1	139
6.3.3	Mean Waiting Times	140
6.4	Statistical Packet Multiplexer	142
6.4.1	Modeling of Packetized Process	142
6.4.2	Indices of Dispersion and Skewness	143
6.4.3	MMPP Approximation	144
6.4.4	MMPP + M/G/1	146

6.5	Local Area Networks	148
6.5.1	Token Ring LAN	148
6.5.2	Approximation for Asymmetric System	150
6.5.3	CSMA/CD LAN	151
6.5.4	Mean Access Time	153
	Exercises	156
7	TRAFFIC SIMULATION	157
7.1	Introduction	157
7.2	Methods of Simulation	159
7.2.1	Problem Formulation and Modeling	159
7.2.2	Programming for Simulation	160
7.2.3	Simulation Language, GPSS	161
7.2.4	General Purpose Programming Languages	162
7.3	Generation of Random Numbers	165
7.3.1	Random Number Generation Methods	165
7.3.2	Uniform Random Number	166
7.3.3	Arbitrary Random Numbers	167
7.4	Analysis of Output Result	170
7.4.1	Confidence Interval	170
7.4.2	Replication Method	171
7.4.3	Batch Mean Method	172
7.4.4	Regenerative Method	173
	Exercises	174
	Bibliography	175
	APPENDICES	179
A	Basic Teletraffic Formulas	181
A.1	Notation	181
A.2	Markovian Models	182
A.3	Poisson Input Non-Markovian Models	184
A.4	Renewal Input Non-Markovian Models	185
A.5	Non-Renewal Input Models	187
B	Programs for Erlang B Formula	189
B.1	Integer Number of Servers	189
B.2	Real Number of Servers	189
B.3	Derivatives of Erlang B Formula	190
B.4	BASIC Program Lists	191
C	Basis of Probability Theory	195
C.1	Events and Probability	195
C.1.1	Events	195
C.1.2	Probability	196

C.1.3	Conditional Probability	197
C.2	Distribution Functions	198
C.2.1	Random Variables	198
C.2.2	Joint Distribution Function	199
C.2.3	Convolution	200
C.3	Expectation and Transforms	200
C.3.1	Expectation	200
C.3.2	Laplace-Stieltjes Transform	202
C.3.3	Probability Generating Function	203
C.4	Examples of Probability Distributions	204
C.4.1	Probability Distribution	204
C.4.2	Discrete Distributions	204
C.4.3	Continuous Distributions	205
C.5	Stochastic Processes	206
C.5.1	Markov Process	206
C.5.2	Discrete-Time Markov Chain	207
C.5.3	Continuous-Time Markov Chain	209
C.5.4	Birth-Death Process	210
D	Solutions to Exercises	213
	Index	221
