

Research and Exposition in Mathematics
Volume 20

General Algebra and Applications

edited by

K. Denecke and H.-J. Vogel

Contents

Preface

Th. Bier	
Totientenzahlen und simpliziale Komplexe	1
P. Burmeister	
Tools for a theory of partial algebras	12
I. Chajda	
Test algebras for Mal'cev conditions	33
K. Denecke, D. Lau, R. Pöschel, D. Schweigert	
Solidifyable clones	41
K. Denecke, O. Lüders	
Tolerance-primal algebras with one nontrivial tolerance, their dualities and equivalences	70
W. Geyer	
The class of lattices with $ L = Con(L) $	86
K. Glazek	
Morphisms of general algebras without fixed fundamental operations	89
B. Gorsler, R. Thron	
On a classification of modules using generalized identities	113
E. Graczyńska	
EIS for nilpotent shifts of varieties	116
K. Halkowska	
A representation theorem for algebras from varieties defined by P -compatible identities	121
G. Hartung	
An extended duality for lattices	126
L. Heindorf	
Some examples of non-dualizable algebras	143
K. Kaarli	
On certain classes of algebras generating arithmetical affine complete varieties	152

A. G. Pinus	
Elementary expressiveness in skeletons of the variety of Boolean Algebras and continuum hypothesis	162
J. Plonka	
Free algebras over regularizations of varieties	170
R. Pöschel, M. Reichel	
Projection algebras and rectangular algebras	180
A. V. Reibold	
Wann sind Kongruenzklassenverbände subdirekt reduzibel?	195
K. Rosenbaum	
Darstellung metazyklischer Gruppen	206
S. E. Schmidt	
On prospects	214
SL. Shtrakov	
On some transformation groups in k -valued logic	225
