

Contents

Preface	vii
List of Participants	viii
G. Baszenski and F.-J. Delves	
Multivariate Boolean midpoint rules	1
M. Beckers and R. Cools	
A relation between cubature formulae of trigonometric degree and lattice rules	13
T. Bloom, D.S. Lubinsky and H. Stahl	
Distribution of points in convergent sequences of interpolatory integration rules: The rates	25
H. Brass	
Bounds for Peano kernels	39
R. Cools and H.J. Schmid	
A new lower bound for the number of nodes in cubature formulae of degree $4n + 1$ for some circularly symmetric integrals	57
S. Ehrich	
On the construction of Gaussian quadrature formulae containing preassigned nodes	67
T.O. Espelid	
Integrating singularities using non-uniform subdivision and extrapolation	77
K.-J. Förster	
Variance in quadrature – a survey	91
W. Gautschi	
Gauss-type quadrature rules for rational functions	111
A. Genz	
Subdivision methods for adaptive integration over hyperspheres	131
A. Guessab	
Formules de quadrature dans $\mathbb{R}^2$ avec “réseau” minimal de droites	141

S.-Å. Gustafson	
Quadrature rules derived from linear convergence acceleration schemes	151
A. Haegemans and P. Verlinden	
Construction of fully symmetrical cubature rules of very high degree for the square	167
T. Hasegawa and T. Torii	
Numerical integration of nearly singular functions	175
D.B. Hunter and H.V. Smith	
Some problems involving orthogonal polynomials	189
P. Köhler	
Intermediate error estimates for quadrature formulas	199
F. Locher	
Stability tests for linear difference forms	215
J.N. Lyness	
The canonical forms of a lattice rule	225
G. Mastroianni and P. Vértési	
Error estimates for product quadrature formulae	241
H. Niederreiter and I.H. Sloan	
Quasi-Monte Carlo methods with modified vertex weights	253
G. Nikolov	
Gaussian quadrature formulae for splines	267
E. Novak	
Quadrature formulas for convex classes of functions	283
F. Peherstorfer	
On positive quadrature formulas	297
K. Petras	
Quadrature theory of convex functions	315
K. Ritter, G.W. Wasilkowski and H. Woźniakowski	
On multivariate integration for stochastic processes	331
C. Schneider	
Rational Hermite interpolation and quadrature	349
A. Sidi	
A new variable transformation for numerical integration	359
Problems	375
