

Table of Contents

Introduction	ix
1. Residue Currents in one Dimension. Different Approaches	
1. Residue attached to a holomorphic function	1
2. Some other approaches to the residue current	4
3. Some variants of the classical Pompeiu formula	8
4. Some applications of Pompeiu's formulas. Local results	10
5. Some applications of Pompeiu's formulas. Global results	14
References for Chapter 1	20
2. Integral Formulas in Several Variables	
1. Chains and cochains, homology and cohomology	21
2. Cauchy's formula for test functions	23
3. Weighted Bochner-Martinelli formulas	27
4. Weighted Andreotti-Norguet formulas	38
5. Applications to systems of algebraic equations	41
References for Chapter 2	46
3. Residue Currents and Analytic Continuation	
1. Leray iterated residues	49
2. Multiplication of principal values and residue currents	54
3. The Dolbeault complex and the Grothendieck residue	59
4. Residue currents	69
5. The local duality theorem	74
References for Chapter 3	88
4. The Cauchy-Weil Formula and its Consequences	
1. The Cauchy-Weil formula	91
2. The Grothendieck residue in the discrete case	102
3. The Grothendieck residue in the algebraic case	110
References for Chapter 4	115
5. Applications to Commutative Algebra and Harmonic Analysis	
1. An analytic proof of the algebraic Nullstellensatz	117
2. The membership problem	131
3. The Fundamental Principle of L. Ehrenpreis	142
4. The role of the Mellin transform	147
References for Chapter 5	154
