

Table of Contents

1	Introduction	1
1.1	The subject of this book	1
1.2	What do we do in this book?	4
1.3	To whom do we address this book?	5
1.4	The contents of this book	6
1.5	Acknowledgments	8
2	Rudiments of logic and set theory	9
2.1	Syntax of propositional logic	9
2.2	Semantics of propositional logic	11
2.3	Proof theory for propositional logic	17
2.4	Completeness and compactness of propositional logic	20
2.5	Relations, partial orderings	21
2.6	Elements of predicate logic	23
2.7	Well-orderings, ordinal numbers	31
2.8	Monotone operators	34
3	General default theories	37
3.1	Monotone rules in propositional logic	38
3.2	Default logic — motivation	46
3.3	Default logic — syntax	50

3.4	Extensions for default theories	51
3.5	Two more characterizations of extensions	61
3.6	Properties of default theories	66
3.7	Extensions and well-orderings	71
3.8	Prioritized default theories	82
3.9	Computing extensions	84
3.10	Other structures associated with default theories	87
3.11	Partial extensions	94
3.12	Comments and remarks	101
4	Normal default theories	105
4.1	Normal default theories	105
4.2	Properties of normal default theories	109
4.3	The Closed World Assumption	111
4.4	Comments and remarks	123
5	Representation theory for default logic	125
5.1	Representability of default theories	125
5.2	Semi-representability of default theories	132
5.3	A representation result for weak extensions	137
5.4	Comments and remarks	139
6	Logic programming and nonmonotonic reasoning	141
6.1	Logic programs — basic definitions	141
6.2	Horn programs	147
6.3	Stable models of general logic programs	149
6.4	Supported models of logic programs	152
6.5	Logic programming with classical negation	159
6.6	Clausal logic programming	170
6.7	Stratified and locally stratified logic programs	172

6.8	Proof schemes and stable models	182
6.9	Comments and remarks	186
7	Modal logic	189
7.1	Modal logics — syntax and basic properties	189
7.2	General Kripke semantics	200
7.3	Kripke semantics for normal logics	210
7.4	Index logics	218
7.5	Comments and remarks	222
8	Stable theories	223
8.1	Stable theories and their elementary properties	223
8.2	Characterizations of stable theories	228
8.3	Algorithms	238
8.4	Comments and remarks	247
9	Modal nonmonotonic logics	249
9.1	Context-dependent proofs in a modal logic	250
9.2	$\mathcal{S}$ -expansions and their elementary properties	252
9.3	Minimal model semantics	259
9.4	Consistency with respect to introspection	271
9.5	Characterization of $\mathcal{S}$ -expansions	279
9.6	Comments and remarks	287
10	Nonmonotonic logic of pure necessitation and autoepistemic logics	289
10.1	Nonmonotonic logic N	290
10.2	Nonmonotonic logics kd45 and Sw5	296
10.3	Autoepistemic logic; context semantics	308
10.4	Comments and remarks	315
11	Topics in modal nonmonotonic logic	317
11.1	Algorithms to compute $\mathcal{S}$ -expansions	317

11.2	Monotonic modal logics with the same nonmonotonic counterpart	325
11.3	Adding new definitions to a theory	337
11.4	Bounding the depth of introspection	341
11.5	Ground $\mathcal{S}$ -expansions	343
11.6	Bounding introspection to $\mathcal{L} \cup \{\neg L\varphi : \varphi \in \mathcal{L}\}$	346
11.7	Comments and remarks	350
12	Relations among nonmonotonic formalisms	351
12.1	Expressing default reasoning in modal nonmonotonic logics	351
12.2	Another semantics for default logic	357
12.3	Interpreting logic programs in modal nonmonotonic logics	362
12.4	More characterizations of stable answer sets	364
12.5	Weak extensions, stable expansions and supported models	368
12.6	Interpreting logic programs in autoepistemic logic	374
12.7	Truth maintenance and nonmonotonic systems	376
12.8	Comments and remarks	380
13	Complexity of some forms of nonmonotonic reasoning	383
13.1	Basic notions of the complexity theory	383
13.2	Complexity of default reasoning	385
13.3	Complexity of reasoning with modal nonmonotonic logics	391
13.4	Complexity issues for finite logic programs	396
13.5	Issues in complexity of models of infinite logic programs	399
13.6	Comments and remarks	404
	References	405
	Index	411
