

CONTENTS

Preface	v
On propagating orthogonal transformations in a product of 2×2 triangular matrices	1
Adam Bojanczyk and Paul Van Dooren	
A parallel divide and conquer algorithm for the generalized real symmetric definite tridiagonal eigenproblem	11
Carlos F. Borges and William B. Gragg	
A parallel implementation of the GMRES method	31
Daniela Calvetti, Johnny Petersen and Lothar Reichel	
Optimal semi-iterative methods applied to SOR in the mixed case	47
Michael Eiermann and Richard S. Varga	
Differential qd algorithms	75
K. Vince Fernando and Beresford N. Parlett	
Solution of shifted linear systems by quasi-minimal residual iterations	101
Roland W. Freund	
Implementation details of the coupled QMR algorithm	123
Roland W. Freund and Noël M. Nachtigal	
Preconditioned iterative regularization for ill-posed problems	141
Martin Hanke, James Nagy and Robert Plemmons	
Block-ADI preconditioners for solving sparse nonsymmetric linear systems of equations	165
Sangback Ma and Youcef Saad	
A new application for generalized M-matrices	179
Reinhard Nabben	
On symmetric ultrametric matrices	193
Richard S. Varga and Reinhard Nabben
