I. Two-Dimensional Manifolds of Bounded Curvature

Yu.G. Reshetnyak

Translated from the Russian
by E. Primrose

Contents

Chapter 1. Preliminary Information 6

§1. Introduction 6
1.1. General Information about the Subject of Research and a Survey of Results 6
1.2. Some Notation and Terminology 10

§2. The Concept of a Space with Intrinsic Metric 11
2.1. The Concept of the Length of a Parametrized Curve 11
2.2. A Space with Intrinsic Metric. The Induced Metric 13
2.3. The Concept of a Shortest Curve 16
2.4. The Operation of Cutting of a Space with Intrinsic Metric ... 16

§3. Two-Dimensional Manifolds with Intrinsic Metric 18
3.1. Definition. Triangulation of a Manifold 18
3.2. Pasting of Two-Dimensional Manifolds with Intrinsic Metric 22
3.3. Cutting of Manifolds 30
3.4. A Side of a Simple Arc in a Two-Dimensional Manifold 31

§4. Two-Dimensional Riemannian Geometry 36
4.1. Differentiable Two-Dimensional Manifolds 36
4.2. The Concept of a Two-Dimensional Riemannian Manifold ... 37
4.3. The Curvature of a Curve in a Riemannian Manifold. Integral Curvature. The Gauss-Bonnet Formula 43
4.4. Isothermal Coordinates in Two-Dimensional Riemannian Manifolds of Bounded Curvature 48

§5. Manifolds with Polyhedral Metric 49
5.1. Cone and Angular Domain 49
5.2. Definition of a Manifold with Polyhedral Metric 53
5.3. Curvature of a Set on a Polyhedron. Turn of the Boundary. The Gauss-Bonnet Theorem 58
5.4. A Turn of a Polygonal Line on a Polyhedron 61
5.5. Characterization of the Intrinsic Geometry of Convex Polyhedra 63
5.6. An Extremal Property of a Convex Cone. The Method of Cutting and Pasting as a Means of Solving Extremal Problems for Polyhedra 64
5.7. The Concept of a K-Polyhedron 68

Chapter 2. Different Ways of Defining Two-Dimensional Manifolds of Bounded Curvature 71

§6. Axioms of a Two-Dimensional Manifold of Bounded Curvature. Characterization of such Manifolds by Means of Approximation by Polyhedra 71
6.1. Axioms of a Two-Dimensional Manifold of Bounded Curvature 71
6.2. Theorems on the Approximation of Two-Dimensional Manifolds of Bounded Curvature by Manifolds with Polyhedral and Riemannian Metric 76
6.3. Proof of the First Theorem on Approximation 77
6.4. Proof of Lemma 6.3.1 90
6.5. Proof of the Second Theorem on Approximation 94

§7. Analytic Characterization of Two-Dimensional Manifolds of Bounded Curvature 97
7.1. Theorems on Isothermal Coordinates in a Two-Dimensional Manifold of Bounded Curvature 97
7.2. Some Information about Curves on a Plane and in a Riemannian manifold 105
7.3. Proofs of Theorems 7.1.1, 7.1.2, 7.1.3 112
7.4. On the Proof of Theorem 7.3.1 119

Chapter 3. Basic Facts of the Theory of Manifolds of Bounded Curvature 123

§8. Basic Results of the Theory of Two-Dimensional Manifolds of Bounded Curvature 123
8.1. A Turn of a Curve and the Integral Curvature of a Set 123
8.2. A Theorem on the Contraction of a Cone. Angle between Curves. Comparison Theorems 135
8.3. A Theorem on Pasting Together Two-Dimensional Manifolds of Bounded Curvature 141

8.4. Theorems on Passage to the Limit for Two-Dimensional Manifolds of Bounded Curvature 142
8.5. Some Inequalities and Estimates. Extremal Problems for Two-Dimensional Manifolds of Bounded Curvature 147

§9. Further Results. Some Additional Remarks 151
