

Contents

1	Platonic Solids: Geometry and Symmetry	1
1.1	The Platonic Solids and Their Duals	2
1.2	Elements of Symmetry in Space	8
1.3	Polytopes in the Four-Dimensional Space and Their Projections onto the Physical Space	13
1.4	Elements of Crystallography	18
1.5	The Reciprocal Lattice	31
	Further Reading	34
2	Structural Order	35
2.1	Order and Disorder	35
2.2	Rules of Order	38
2.3	Order Parameters	39
2.4	Cellular Disorder and Topological Disorder	44
2.5	Structurally Disordered Materials	46
2.6	Description of Disorder Through Entropy	51
	References	55
3	The Glass Transition	57
3.1	Phenomenology of the Glass Transition	57
3.2	Theories of the Glass Transition	72
3.2.1	The Adam-Gibbs Theory	73
3.2.2	Free Volume Theory	75
3.2.3	Thermodynamic Theories	79
3.2.4	Mode Coupling Theory	81
3.3	Easiness of Glass Formation	89
3.4	Bulk Metallic Glasses	97
	References	102
4	The Structure of Disordered Systems	105
4.1	Why Do We Study the Structure of Amorphous Systems?	105
4.2	The Distribution Functions	107
4.3	Scattering	116
4.3.1	X-Rays	116
4.3.2	Electrons	128

4.3.3	Scattering from Multicomponent Systems	131
4.4	X-Ray Absorption Spectroscopy (XAS)	137
4.5	Mössbauer Spectroscopy	147
4.6	Vibrational Spectroscopies	151
4.6.1	IR Spectroscopy of Amorphous Systems	159
4.6.2	Raman Spectroscopy of Amorphous Systems	164
4.7	Short-Range Order	170
4.7.1	Metallic Systems	170
4.7.2	Covalently Bonded Systems	182
4.8	Medium-Range Order	188
4.9	Fluctuation Electron Microscopy and the Determination of Medium-Range Order	203
4.10	Structural Models	209
4.10.1	The Dense Random Packing of Hard Spheres' Model	210
4.10.2	The Continuous Random Network Model	216
	References	220
5	Dynamics in a Structurally Disordered System	223
5.1	Collective Excitations	223
5.2	Transport Through Structural Disorder: Anderson's Localization	232
	References	245
6	Clusters	247
6.1	Definition of an Atomic Cluster	247
6.2	Synthesis and Detection of Atomic Clusters	253
6.3	Structure of van der Waals Clusters	255
6.4	Structure of Alkali Metal Clusters	272
6.5	The Fullerene C ₆₀ and its kin	289
6.6	Nanostructured and Cluster-Assembled Materials	299
	References	307
7	Quasicrystals	311
7.1	Periodic and Aperiodic Crystals	311
7.2	The Enlarged Notion of Crystal	318
7.3	Quasicrystals and Tilings	323
7.4	Model Structures and Crystalline Approximants	328
7.5	Structural Properties and Stability of Real Quasicrystals	343
	References	359
	Appendix	361
	References	365
	Index	367
