

Contents

Preface: Proceedings of the Integers Conference 2023 — V

Raj Agrawal, Prarthana Bhatia, Kratik Gupta, Powers Lamb, Andrew Lott, Alex Rice, and Christine Rose Ward

Computations and observations on congruence covering systems — 1

Jesús Sistos Barrón and Hua Wang

Balanced N -color compositions — 11

Michael A. Bennett and P. G. Walsh

Computing four-term arithmetic progressions of powerful numbers — 25

Zhanar Berikkyzy, Pamela E. Harris, Anna Pun, Catherine Yan, and Chenchen Zhao

Combinatorial identities for vacillating tableaux — 31

Gaston A. Brouwer, Jonathan Joe, and Matt Noble

Odd vector cycles in \mathbb{Z}^m — 65

Tsz Ho Chan

Powered numbers in short intervals — 83

Hùng Việt Chu, Nurettin Irmak, Steven J. Miller, László Szalay, and Sindy Xin Zhang

Schreier multisets and the s -step Fibonacci sequences — 91

Chloe Helmreich and Jonathan Webster

Tabulating absolute Lucas pseudoprimes — 103

Brian Hopkins

Henrik Eriksson's Bulgarian Solitaire variant — 121

Brad Isaacson

On a generalization of a theorem of Ibukiyama to evaluate three imprimitive character sums — 135

William J. Keith, Robert Schneider, and Andrew V. Sills

Composition-theoretic series and false theta functions — 151

Daniel Keliher and Ethan Simpson Lee

On the constants in Mertens' theorems for primes in arithmetic progressions — 169

Shelby Kilmer, Caleb Marshall, and Steven Senger

Dot product chains — 183

Melvyn B. Nathanson

Permutation patterns of the iterated Syracuse function — 199

Bishnu Paudel and Chris Pinner

An upper bound on the inhomogeneous approximation constants — 223

Aaron Robertson

On the minimum number of monochromatic 2-dimensional Schur triples — 233

Amadou Tall

The Scholz conjecture on addition chains is true for infinitely many integers with $\ell(2n) = \ell(n)$ — 243

Joseph Vandehey

Digital problems in the theory of partitions — 251

Hunter Waldron

A combinatorial proof of a partition perimeter inequality — 269
