

Table of Contents

Table of Contents	I
List of Figures.....	III
List of Abbreviations.....	IV
1 Introduction	1
1.1 Objectives of the study	2
2 Literature.....	3
2.1 General epidemiology of helminth infections in the chicken host	3
2.2 Factors associated with prevalence of nematode infections and worm development	5
2.2.1 <i>Environmental factors driving exposure to infections</i>	6
2.2.2 <i>Parasite related factors driving host susceptibility</i>	7
2.2.3 <i>Host-related factors driving resistance to worms</i>	8
2.3 Allocation of nutrient metabolites during nematode infections.....	9
2.3.1 <i>Parasites alter the gut microbiome</i>	11
2.3.2 <i>Parasites secrete excretory-secretory products</i>	12
2.3.3 <i>Parasites depend on their host for nutrient</i>	13
2.4 Role of nutrient metabolites in immune development.....	14
2.5 Methods of assessing nematode infections in chicken host.....	15
2.5.1 <i>Faecal egg counting techniques</i>	15
2.5.2 <i>Plasma and egg yolk antibody ELISA</i>	16
2.5.3 <i>Coproantigen ELISA</i>	17
3. Publications in peer-reviewed journals.....	19
3.1 ¹ H-NMR based-metabolomics reveals alterations in the metabolite profiles of chickens infected with ascarids and concurrent histomonosis infection	20
3.2 A copro-antigen ELISA for the detection of ascarid infections in chickens.....	33
3.3 Pattern and repeatability of ascarid-specific antigen excretion through chicken faeces, and the diagnostic accuracy of coproantigen measurements as compared with McMaster egg counts and plasma and egg yolk antibody measurements in laying hens	42
4. General discussion	57
4.1 Metabolic responses in chicken during mixed nematode infections	58
4.2 Advancement in the diagnosis of nematode infections in chickens.....	60
4.3 Perspective for future research and general conclusions.....	61

5 Zusammenfassung	63
6 Summary	65
7 Bibliography	67
8. List of publications and oral presentations.....	83
9. Acknowledgements.....	85
10 Funding sources	87
11 Conflict of interest.....	88
12. Declaration of independence	89
