Acknowledgment — V

Preface to the first edition — VII

Preface to the second edition — IX

1 Mathematics revision — 1

- 1.1 Basic notions of sets — 1
Exercises — 4
- 1.2 Basic concepts of combinatorics — 5
 - 1.2.1 More about binomial coefficients — 7
 - 1.2.2 Specific permutations and a generalization — 11
Exercises — 14
- 1.3 Some special functions — 15
Exercises — 19
- 1.4 Integration of bidimensional functions — 21
Exercises — 27

2 Introduction to probability — 29

- 2.1 Mathematical models — 29
- 2.2 Further examples of random experiments — 29
- 2.3 Assigning probabilities to events — 31
- 2.4 Basic notions of probability — 33
Exercises — 37

3 Finite sample spaces — 39

- 3.1 Equally likely outcomes — 39
- 3.2 Variants of a random experiment — 44
Exercises — 47

4 Conditional probability and independence — 49

- 4.1 Conditional probability — 49
- 4.2 Bayes' theorem — 53
- 4.3 Independent events — 55
Exercises — 62

5 One-dimensional random variables — 67

- 5.1 The concept of a random variable — 67
- 5.2 Discrete random variables — 68
- 5.3 The binomial distribution and extensions — 69

5.4	Continuous random variables —	72
5.5	Distribution and survival function —	75
	Exercises —	78
6	Functions of random variables —	82
6.1	Continuous random variables —	82
6.2	Discrete random variables —	88
	Exercises —	90
7	Bidimensional random variables —	92
7.1	Discrete random variables —	92
7.2	Continuous random variables —	94
7.3	Marginal distributions and independent variables —	97
7.4	Conditional distributions, distribution and survival functions —	101
7.5	Functions of a random variable —	105
	Exercises —	108
8	Characteristics of random variables —	111
8.1	The expected value of a random variable —	111
8.2	Expectation of a function of a random variable —	113
8.3	Properties of the expected value —	115
8.4	Variance, moments, and shape characteristics —	117
8.5	Probability inequalities —	123
8.6	Covariance and correlation —	126
	Exercises —	130
9	Discrete probability models —	133
9.1	The Poisson distribution —	133
9.2	The Poisson process —	135
9.3	The geometric distribution —	137
9.4	The Pascal distribution —	139
9.5	The hypergeometric distribution —	141
9.6	The multinomial distribution —	144
	Exercises —	145
10	Continuous probability models —	148
10.1	The normal distribution —	148
10.2	The exponential distribution —	154
10.3	The gamma distribution —	155
10.4	The chi-square distribution —	157
10.5	The beta distribution —	159
10.6	The multivariate normal distribution —	160

10.7	A bivariate exponential distribution — 166
	Exercises — 167
11	Generating functions in probability — 170
11.1	The moment-generating function — 170
11.2	Generation of moments — 172
11.3	Reproductive properties — 175
11.4	The probability-generating function — 179
11.5	Generation of probabilities and factorial moments — 181
	Exercises — 184
12	Construction of new distributions — 186
12.1	A classical construction principle — 186
12.2	Exponentiated generalized distribution — 190
12.3	Mixture distributions — 192
12.4	An extended distribution class — 194
12.5	Transformations of a random variable — 196
12.6	Functions of two variables — 198
12.7	Slash distributions — 199
	Exercises — 200
13	Sums of many random variables — 203
13.1	The law of large numbers — 203
13.2	Normal approximation to the binomial distribution — 204
13.3	The central limit theorem — 207
	Exercises — 210
14	Samples and sampling distributions — 212
14.1	Samples and statistics — 212
14.2	Order statistics — 214
14.3	Sampling in simulation and deterministic applications — 219
	Exercises — 225
15	Estimation of parameters — 228
15.1	Criteria for estimators — 228
15.2	Maximum likelihood estimation — 232
15.3	Method of moments — 238
15.4	Linear regression — 242
15.5	Confidence intervals — 249
15.6	Student's t -distribution — 253
	Exercises — 255

16 Hypothesis tests — 259

- 16.1 Basic concepts and tests — **259**
- 16.2 OC-function, power function and p -value — **263**
- 16.3 Tests for the mean of a normal distribution with unknown variance — **268**
- 16.4 Tests for the variance of a normal distribution — **269**
- 16.5 Comparing the means of two normal distributions — **270**
- 16.6 Comparing the variances of two normal distributions — **274**
- 16.7 Chi-square goodness-of-fit test — **276**
- 16.8 Contingency table chi-square test — **279**
Exercises — **281**

17 Exploratory data analysis — 284

- 17.1 Introduction — **284**
- 17.2 Summary measures — **287**
- 17.3 Bidimensional analyses — **298**
Exercises — **306**

Appendix — 311

- Solutions to exercises — **311**
- Table of distributions — **344**
- Standard normal distribution — **347**
- Student's t -distribution — **348**
- Chi-square distribution — **350**
