

Contents

1	Introduction	1
1.1	Background and Motivation	1
1.1.1	Multivariate Signal Processing Based Fault Diagnosis	3
1.1.2	Nonlinear Frequency Analysis Model Based Fault Detection	5
1.2	Objectives of this Work	10
1.3	Outline of this Thesis	10
2	The Basics and Kinematics of Gears	13
2.1	Types of Gears and their Operation	13
2.2	Gear Mesh Stiffness and Dimensioning Geometry of Gears	15
2.2.1	Gear Mesh Stiffness and Contact Geometry	16
2.2.2	Dimensioning Geometry of Gears	17
2.2.3	Definition of Gear Failure Mode	18
2.2.4	Gear Features in Condition Monitoring	18
2.3	Wind Turbine Gearbox Kinematics and Fault Feature Frequencies	21
2.4	Signal Model Characteristics of Planetary Gearbox	26
2.4.1	Localized Fault Signal Model at Meshing Point	27
2.4.2	Transmission Path Influence on Vibration Signal Model	30
2.4.3	Observed Faulty Vibration Signal Model from Planetary Gearbox	32
2.4.4	Numerical Example and Model Validation	36
2.5	Concluding Remarks	39

3	Vibration Signal-Based Analysis for Gear Faults	41
3.1	Time Domain Analysis	42
3.2	Frequency Domain Analysis	45
3.3	Joint Time-Frequency Domain Analysis	48
3.3.1	Short Time Fourier Transform	49
3.3.2	Wavelet Analysis	50
3.3.3	Wigner-Ville Distribution	52
3.3.4	Minimum Entropy Deconvolution Technique	53
3.3.5	Empirical Mode Decomposition	58
3.4	Other Approaches	62
3.4.1	Order Tracking	62
3.4.2	Time Synchronous Average	63
3.4.3	Noise Cancellation Based Adaptive Signal Processing	65
3.5	Concluding Remarks	70
4	Frequency Domain Analysis for Nonlinear Systems	71
4.1	Nonlinear Systems Representation Based Polynomial Model	71
4.1.1	Introduction	71
4.1.2	Nonlinear System Modeling and Frequency Analysis Based Fault Diagnosis	72
4.2	Frequency Analysis Representation of Nonlinear Systems	73
4.2.1	The Functional Based Volterra Time Series Model Approach	73
4.2.2	Linear Versus Nonlinear Frequency Response Functions	76
4.2.3	The Output Frequency Response Based GFRFs	80
4.2.4	Methods for Computation of GFRFs	81
4.3	Characteristics of Output Frequencies for Nonlinear Systems	89
4.3.1	Generation of Frequencies in Linear and Nonlinear Systems Response	90
4.3.2	Output Frequencies Under Harmonics Inputs for Nonlinear Systems	91
4.3.3	Output Frequencies Under General Inputs for Nonlinear Systems	94

4.4	The Analysis of Nonlinear Systems in the Frequency Domain Based NOFRFs	95
4.4.1	Nonlinear Output Frequency Response Functions	95
4.4.2	Numerical Estimation of NOFRFs	97
4.5	Concluding Remarks	98
5	Development of Advanced Signal Processing Based Fault Diagnosis	101
5.1	Problem Statement	101
5.2	Multivariate Signal Processing Based Feature Extraction	102
5.2.1	Theoretical Background of Multivariate Extension of EMD	103
5.2.2	Projections and Direction Vectors	106
5.2.3	Problems of Single and Multichannel Data Analytics with EMD	106
5.2.4	Improved Form of Multivariate EMD	109
5.2.5	Simulation Results	110
5.3	Multi-stage Wind Turbine Gear Fault Diagnosis Aided Demodulation Analysis	114
5.3.1	Filter Bank Property of MEMD	115
5.3.2	Selection of Significant Multivariate IMFs	115
5.3.3	Demodulation Analysis Aided Fault Feature Extraction	117
5.3.4	Framework of Multivariate Signal Processing Based Gear Fault Detection	120
5.3.5	Experimental Results	121
5.4	Concluding Remarks	131
6	Estimation of NOFRFs Based Parametric Characteristic Analysis	133
6.1	Problem Formulation	133
6.2	Parametric Characteristic Analysis	135
6.2.1	Preliminaries	136
6.2.2	Separable Function	136
6.2.3	Coefficient Extractor	138
6.3	Computation of GFRFs and NOS Aided Parametric Characteristic Analysis	145
6.3.1	Computation of Parametric Characteristic of GFRFs with Respect to Model Nonlinear Parameters	145

6.3.2	Effects of Nonlinearity on the GFRFs From Different Types of Nonlinearity	150
6.3.3	Computation of NOS Based on the Parametric Characteristic Analysis	150
6.3.4	Computation of NOS Based on Specific Nonlinear Parameters	157
6.3.5	Numerical Example	162
6.4	Estimation of NOFRFs Using Parametric Characteristic Analysis for Damage Detection	167
6.4.1	A Proposed Method for Computation of NOFRFs	167
6.5	Concluding Remarks	171
7	Conclusions and Future Work	173
	Bibliography	177
