

Carl-Heinz Scriba

Local Analysis

Part B First Order Differential Equations
and Differential Forms

Akademie Verlag

Table of Contents

Portion 1: First Order Differential Equations

Chapter I: Explicit Systems of First Order Ordinary Differential Equations

§1 Existence and Uniqueness Theorem of Picard-Lindelöf	
1. Introduction	2
2. Theorem of Picard-Lindelöf	6
§2 Elementary Methods for Solving $\omega(\xi, \varphi(\xi), \varphi'(\xi)) = 0$	
1. Introduction	16
2. Exact Differential Equations	20
3. Three Elementary Methods	23
4. Some Special Types of Differential Equations	31
§3 Linear Systems	
1. Heuristic Introduction	39
2. Existence and Uniqueness of Solutions	42
§4 Dependence of the Solutions on a Parameter	
1. Continuous Dependence	50
2. Differentiable Dependence	52

Chapter II: Systems of First Order Partial Differential Equations

§1 Existence, Uniqueness, and Dependence Theorem for Completely Explicit Systems	
1. Reduction of Partial to Ordinary Differential Equations	73
2. Existence and Uniqueness Theorem	75
3. Dependence of the Solutions on a Parameter and the Initial Data	81
§2 Theory of Characteristics for Incompletely Explicit Systems with one Unknown Function	
1. Heuristic Preliminaries	85
2. Cauchy's Initial Value Problem	93
3. Hamilton-Jacobi Differential Equation	103

§ 3 Quasilinear Systems	
1. Introductory Remarks	109
2. Special Case $f'(x) a(x) = 0$	111
3. Special Case $f'(x) a(x) = b$	118

Portion 2: Differential Forms

Chapter I: Alternating Multilinear Functionals and Operators

§ 1 É. Cartan's Exterior and Differential Forms	
1. Exterior Product	124
2. Exterior Derivative	132
§ 2 Algebraic Properties	
1. Monomials	138
2. Alternating Bilinear Functionals	154
§ 3 Analytic Properties	
1. Transformation of Operator Fields	177
2. Lie Derivative	181

Chapter II: Alternating Multilinear Operator Fields

§ 1 Integrating Operators of Surjective Linear Operator Fields	
1. Introduction	195
2. Equivalence Theorem	203
§ 2 Associated Field of an Alternating Multilinear Operator Field	
1. Introduction	216
2. Plane Fields	217
3. Representation of an Alternating Multilinear Operator Field by a Minimal Number of Coordinates	221
4. Closed Monomial Fields	230
§ 3 Characteristic Field of an Alternating Multilinear Operator Field	
1. Introduction	234
2. Tensor Product	239
3. Representation of an Alternating Multilinear Operator Field Similar to Such a Field by a Minimal Number of Coordinates	252

§4 Pfaff's Problem

- 1. Introduction 273
- 2. Darboux's Theorem and Fundamental Theorem of Pfaff's Problem 275
- 3. Maximal Dimension of Integral Surfaces of a Nowhere Vanishing Pfaffian Whose Characteristic Field has Constant Codimension 309
