

Contents

Preface	VII
Legal Matters	XI
Introduction	XIII
Chapter 1: Background on Probability and Statistics	1
1.1 Probability and Distributions	1
1.2 Random Number Generators	7
1.3 Moments and Conditional Expectations	16
1.4 Random Sequences	26
1.5 Testing Random Numbers	31
1.6 Markov Chains as Basic Stochastic Processes	43
1.7 Wiener Processes	50
Chapter 2: Stochastic Differential Equations	63
2.1 Stochastic Integration	63
2.2 Stochastic Differential Equations	69
2.3 Stochastic Taylor Expansions	76
Chapter 3: Introduction to Discrete Time Approximation	91
3.1 Numerical Methods for Ordinary Differential Equations	91
3.2 A Stochastic Discrete Time Simulation	110
3.3 Pathwise Approximation and Strong Convergence	115
3.4 Approximation of Moments and Weak Convergence	124
3.5 Numerical Stability	129
Chapter 4: Strong Approximations	139
4.1 Strong Taylor Schemes	139
4.2 Explicit Strong Schemes.....	149
4.3 Implicit Strong Approximations	157
4.4 Simulation Studies	169
Chapter 5: Weak Approximations	179
5.1 Weak Taylor Schemes	179
5.2 Explicit Weak Schemes and Extrapolation Methods.....	185
5.3 Implicit Weak Approximations	194

5.4	Simulation Studies	201
5.5	Variance Reducing Approximations	207
Chapter 6: Applications		219
6.1	Visualization of Stochastic Dynamics	219
6.2	Testing Parametric Estimators	229
6.3	Filtering	238
6.4	Functional Integrals and Invariant Measures	246
6.5	Stochastic Stability and Bifurcation	255
6.6	Simulation in Finance	264
References		271
Subject Index		279
List of PC-Exercises		285
Frequently Used Notations		289
