Preface	ix
1 Schrödinger and Dirac operators	
M.Sh. Birman: <i>Discrete spectrum of the periodic Schrödinger operator for non-negative perturbations</i>	3
M.Sh. Birman, T. Weidl: <i>The discrete spectrum in a gap of the continuous one for compact supported perturbations</i>	9
R. Hempel, J. Laitenberger: <i>Schrödinger operators with strong local magnetic perturbations: Existence of eigenvalues in gaps of the essential spectrum</i>	13
M. Hoffmann-Ostenhof, T.Hoffmann-Ostenhoff, N. Nadirashvili: <i>Regularity of the nodal sets of solutions to Schrödinger equations</i>	19
G. Stolz: <i>Results in the spectral theory of Schrödinger operators with wide potential barriers</i>	27
V. Grecchi, M. Maioli, A. Sacchetti: <i>Stark ladders and perturbation theory</i>	33
M. Znojil: <i>Singular potentials: algebraization</i>	37
Y. Saito: <i>Asymptotic behavior of the resolvent of the Dirac operator</i>	45
M.Sh. Birman, A. Laptev: <i>Discrete spectrum of the perturbed Dirac operator</i>	55
2 Generalized Schrödinger operators	
R. Hempel, J. Voigt: <i>The spectrum of Schrödinger operators in $L_p(\mathbf{R}^d)$ and in $C_0(\mathbf{R}^d)$</i>	63
J.F. Brasche: <i>On spectral properties of generalized Schrödinger operators</i>	73
J-P. Antoine, P. Exner, P. 20 Seba, J. Shabani: <i>A Fermi-type rule for contact embedded-eigenvalue perturbations</i>	79

P. Duclos, B. Meller: <i>A simple model for predissociation</i>	89
P. Šťovíček: <i>Scattering on several solenoids</i>	107
M. Klein: <i>Hall conductance of Riemann surfaces</i>	113
3 Stochastic spectral analysis	
M. Demuth, J. van Casteren: <i>Framework and results of stochastic spectral analysis</i>	123
M. Demuth, W. Kirsch, I. McGillivray: <i>Occupation time asymptotics to the decay of eigenfunctions</i>	133
E.M. Ouhabaz: <i>Holomorphic semigroups and Schrödinger equations</i>	137
V.A. Liskevich, Yu.A. Semenov: <i>Some problems on submarkovian semigroups</i>	143
V.A. Liskevich: <i>Smoothness estimates and uniqueness for the Dirichlet operator</i>	149
P. Stollmann: <i>Trace ideal properties of perturbed Dirichlet semigroups</i>	153
4 Many-body problems and statistical physics	
K.B. Sinha: <i>Quantum dynamical semigroups</i>	161
A.M. Khorunzhy, L.A. Pastur: <i>Limits of infinite order, dimensionality or number of components for random finite-difference operators</i>	171
N. Macris, Ph. Martin: <i>Atoms at finite density and temperature and the spectra of reduced density matrices</i>	191
A. Verbeure, V.A. Zagrebnov: <i>Quantum fluctuations in the many-body problem</i>	207
D. Ya. Petrina: <i>General Hamiltonians and model Hamiltonians</i>	213
R. Gielerak, A.L. Rebenko: <i>Poisson fields representations in the statistical mechanics of continuous systems</i>	219
M. Fannes: <i>Exact ground states for quantum spin chains</i>	227
M. Hübner, H. Spohn: <i>The spectrum of the spin-boson model</i>	233
H. Lange, B.V. Toomire, P.F. Zweifel: <i>A survey of Wigner-Poisson problems</i>	239

5 Chaos

J. Dittrich, P. Duclos, P. Šeba: <i>Classical d'Alembert field in an one-dimensional pulsating region</i>	259
P. Šeba: <i>Irregular scattering in one-dimensional periodically driven systems</i>	263
K. Życzkowski: <i>Relatively random unitary operators</i>	277

6 Operator theory and its application

D. Robert: <i>A trace formula for obstacles problems and applications</i>	283
F. Bentosela: <i>Propagation in irregular optic fibres</i>	293
H. Neidhardt, V.A. Zagrebnov: <i>Singular perturbations, regularization and extension theory</i>	299
G. Nenciu: <i>Adiabatic reduction theory. Semiclassical S-matrix for N-state one-dimensional systems</i>	307
V. Buslaev, A. Fedotov: <i>The functional structure of the monodromy matrix for Harper's equation</i>	321
A.Yu. Konstantinov: <i>Eigenfunction expansion of right definite multiparameter problems</i>	343
V. Koshmanenko: <i>Singularly perturbed operators</i>	347
A.N. Kochubei: <i>Some problems of p-adic quantum theory</i>	353
