
Contents

Introduction and background material

Introduction, <i>A.P. Fordy and J.C. Wood</i>	3
A historical introduction to solitons and Bäcklund transformations, <i>A.P. Fordy</i> ...	7
Harmonic maps into symmetric spaces and integrable systems, <i>J.C. Wood</i>	29

The geometry of surfaces

The affine Toda equations and minimal surfaces, <i>J. Bolton and L. Woodward</i> ...	59
Surfaces in terms of 2 by 2 matrices: Old and new integrable cases, <i>A.I. Bobenko</i>	83
Integrable systems, harmonic maps and the classical theory of solitons, <i>M. Melko and I. Sterling</i>	129

Sigma and chiral models

The principal chiral model as an integrable system, <i>M. Mañas</i>	147
2-dimensional nonlinear sigma models: Zero curvature and Poisson structure, <i>M. Bordemann, M. Forger, J. Laartz and U. Schäper</i>	175
Sigma models in 2 + 1 dimensions, <i>R.S. Ward</i>	193

The algebraic approach

Infinite dimensional Lie groups and the two-dimensional Toda lattice, <i>I. McIntosh</i>	205
Harmonic maps via Adler-Kostant-Symes theory, <i>F.E. Burstall and F. Pedit</i> ..	221
Loop group actions on harmonic maps and their applications, <i>M.A. Guest and Y. Ohnita</i>	273

The twistor approach

Twistors, nilpotent orbits and harmonic maps, <i>P.Z. Kobak</i>	295
