The Mathematical Theory of Dilute Gases

With 34 Illustrations

Springer-Verlag
New York Berlin Heidelberg London Paris
Tokyo Hong Kong Barcelona Budapest

Contents

Introduction ... 1

1 Historical Introduction ... 4

1.1 What is a Gas? From the Billiard Table to Boyle's Law ... 4
1.2 Brief History of Kinetic Theory ... 8

2 Informal Derivation of the Boltzmann Equation ... 13

2.1 The Phase Space and the Liouville Equation ... 13
2.2 Boltzmann's Argument in a Modern Perspective ... 19
2.3 Molecular Chaos. Critique and Justification ... 24
2.4 The BBGKY Hierarchy ... 26
2.5 The Boltzmann Hierarchy and Its Relation to the Boltzmann Equation ... 29

3 Elementary Properties of the Solutions ... 33

3.1 Collision Invariants ... 33
3.2 The Boltzmann Inequality and the Maxwell Distributions ...42
3.3 The Macroscopic Balance Equations ... 43
3.4 The H-Theorem ... 49
3.5 Loschmidt's Paradox ... 52
3.6 Poincaré's Recurrence and Zermelo's Paradox ... 55
3.7 Equilibrium States and Maxwellian Distributions ... 56
3.8 Hydrodynamical Limit and Other Scalings ... 57

4 Rigorous Validity of the Boltzmann Equation ... 63

4.1 Significance of the Problem ... 63

4.2 Hard-Sphere Dynamics ... 64
4.3 Transition to L^1. The Liouville Equation and the BBGKY Hierarchy Revisited ... 68
4.4 Rigorous Validity of the Boltzmann Equation ... 72
4.5 Validity of the Boltzmann Equation for a Rare Cloud of Gas in the Vacuum ... 87
4.6 Interpretation ... 90
4.7 The Emergence of Irreversibility ... 95
4.8 More on the Boltzmann Hierarchy ... 100

Appendix 4.A More about Hard-Sphere Dynamics ... 107
Appendix 4.B A Rigorous Derivation of the BBGKY Hierarchy ... 115
Appendix 4.C Uchiyama's Example ... 123

5 Existence and Uniqueness Results ... 133

5.1 Preliminary Remarks ... 133
5.2 Existence from Validity, and Overview ... 135
5.3 A General Global Existence Result ... 139
5.4 Generalizations and Other Remarks ... 161

Appendix 5.A ... 164

6 The Initial Value Problem for the Homogeneous Boltzmann Equation ... 167

6.1 An Existence Theorem for a Modified Equation ... 167
6.2 Removing the Cutoff: The L^1-Theory for the Full Equation ... 171
6.3 The L^∞-Theory and Classical Solutions ... 177
6.4 Long Time Behavior ... 182
6.5 Further Developments and Comments ... 183

Appendix 6.A ... 186
Appendix 6.B ... 188
Appendix 6.C ... 189

7 Perturbations of Equilibria and Space Homogeneous Solutions ...191

7.1 The Linearized Collision Operator ... 191
7.2 The Basic Properties of the Linearized Collision Operator ... 194
7.3 Spectral Properties of the Fourier-Transformed, Linearized Boltzmann Equation ... 202
7.4 The Asymptotic Behavior of the Solution of the Cauchy Problem for the Linearized Boltzmann Equation ... 213
7.5 The Global Existence Theorem for the Nonlinear Equation ...217
7.6 Extensions: The Periodic Case and Problems in One and Two Dimensions ... 219
7.7 A Further Extension: Solutions Close to a Space Homogeneous Solution ... 221

8 Boundary Conditions ... 226

8.1 Introduction ... 226
8.2 The Scattering Kernel ... 227
8.3 The Accommodation Coefficients ... 231
8.4 Mathematical Models ... 235
8.5 A Remarkable Inequality ... 239

9 Existence Results for Initial-Boundary and Boundary Value Problems ... 244

9.1 Preliminary Remarks ... 244
9.2 Results on the Traces ... 246
9.3 Properties of the Free-Streaming Operator ... 254
9.4 Existence in a Vessel with Isothermal Boundary ... 259
9.5 Rigorous Proof of the Approach to Equilibrium ... 267
9.6 Perturbations of Equilibria ... 271
9.7 A Steady Problem ... 273
9.8 Stability of the Steady Flow Past an Obstacle ... 281
9.9 Concluding Remarks ... 283

10 Particle Simulation of the Boltzmann Equation ... 286

10.1 Rationale amd Overview ... 286
10.2 Low Discrepancy Methods ... 289
10.3 Bird's Scheme ... 303

11 Hydrodynamical Limits ... 312

11.1 A Formal Discussion ... 312
11.2 The Hilbert Expansion ... 316
11.3 The Entropy Approach to the Hydrodynamical Limit ... 318
11.4 The Hydrodynamical Limit for Short Times ... 322
11.5 Other Scalings and the Incompressible Navier-Stokes Equations ... 330

12 Open Problems and New Directions ... 336

Author Index ... 342

Subject Index ... 345
