Introduction: Applications of pseudo-holomorphic curves to symplectic topology

<i>J. Lafontaine and M. Audin</i>	1
1 Examples of problems and results in symplectic topology	1
2 Pseudo-holomorphic curves in almost complex manifolds	3
3 Proofs of the symplectic rigidity results	9
4 What is in the book... and what is not	11
Bibliography	12

Part 1: Basic symplectic geometry

I An introduction to symplectic geometry

<i>A. Banyaga</i>	17
1 Linear symplectic geometry	17
2 Symplectic manifolds and vector bundles	21
Appendix: the Maslov class	
<i>M. Audin, A. Banyaga, F. Lalonde and L. Polterovich</i>	33
Bibliography	39

II Symplectic and almost complex manifolds

<i>M. Audin</i>	41
1 Almost complex structures	41
2 Hirzebruch surfaces	50
3 Coadjoint orbits (of $U(n)$)	54
4 Symplectic reduction	58
5 Surgery?	62
Appendix: The canonical almost complex structure on the manifold of 1-jets of pseudo-holomorphic mappings between two almost complex manifolds <i>P. Gauduchon</i>	69
Bibliography	73

Part 2: Riemannian geometry and linear connections

III Some relevant Riemannian geometry

<i>J. Lafontaine</i>	77
1 Riemannian manifolds as metric spaces	77
2 The geodesic flow and its linearisation	87
3 Minimal manifolds	97
4 Two-dimensional Riemannian manifolds	101

5	An application to pseudo-holomorphic curves	104
	Appendix: the isoperimetric inequality	
	<i>M.-P. Muller</i>	108
	Bibliography	111
IV	Connexions linéaires, classes de Chern,	
	théorème de Riemann-Roch	
	<i>P. Gauduchon</i>	113
1	Connexions linéaires	113
2	Classes de Chern	126
3	Le théorème de Riemann-Roch	152
	Bibliographie	161
	Part 3: Pseudo-holomorphic curves and applications	
V	Some properties of holomorphic curves	
	in almost complex manifolds	
	<i>J.-C. Sikorav</i>	165
1	The equation $\bar{\partial}f = g$ in $\mathbf{C}$	166
2	Regularity of holomorphic curves	168
3	Other local properties	174
4	Properties of the area of holomorphic curves	178
5	Gromov's compactness theorem for holomorphic curves	183
	Appendix: Stokes' theorem for forms with differentiable coefficients	187
	Bibliography	189
VI	Singularities and positivity of intersections	
	of J-holomorphic curves	
	<i>D. McDuff</i>	191
1	Elementary properties	192
2	Positivity of intersections	198
3	Local deformations	201
4	Perturbing away singularities	206
	Appendix: The smoothness of the dependence on ε	
	<i>Gang Liu</i>	212
	Bibliography	215
VII	Gromov's Schwarz lemma as an estimate of the gradient	
	for holomorphic curves	
	<i>M.-P. Muller</i>	217
1	Introduction	217
2	A review of some classical Schwarz lemmas	217
3	Isoperimetric inequalities for J -curves	218

4	The Schwarz and monotonicity lemmas	220
5	Continuous Lipschitz extension across a puncture	226
6	Higher derivatives	228
	Bibliography	230
VIII Compactness		
	<i>P. Pansu</i>	233
1	Riemann surfaces with nodes	234
2	Cusp-curves	238
3	Proof of the compactness theorem 2.2.1	239
4	Convergence of parametrised curves	245
	Bibliography	248
IX Exemples de courbes pseudo-holomorphes en géométrie riemannienne		
	<i>F. Labourie</i>	251
1	Immersions isométriques elliptiques	253
2	Courbure de Gauss prescrite	258
3	Autres exemples et constructions	261
	Appendice: convergence d'applications pseudo-holomorphes	264
	Bibliographie	268
X Symplectic rigidity: Lagrangian submanifolds		
	<i>M. Audin, F. Lalonde and L. Polterovich</i>	271
1	Lagrangian constructions	272
2	Symplectic area and Maslov classes—rigidity in split manifolds	284
3	Soft and hard Lagrangian obstructions to Lagrangian embeddings in $\mathbf{C}^n$	293
4	Rigidity in cotangent bundles and applications to mechanics	297
5	Pseudo-holomorphic curves: proof of the main rigidity theorem	307
	Appendix: Exotic structures on $\mathbf{R}^{2n}$	317
	Bibliography	318
	Index	323
	Authors' addresses	327
