

Clusters and Colloids

From Theory to Applications

Edited by Günter Schmid

Weinheim · New York
Basel · Cambridge · Tokyo

Contents

1	General Introduction	
	(G. Schmid)	1
2	Electronic Structure of Metal Clusters and Cluster Compounds	
	(N. Rösch and G. Pacchioni)	5
2.1	Introduction	5
2.2	The Description of the Clusters' Electronic Structure	6
2.2.1	Wave Function Based Methods	7
2.2.2	Density Functional Methods	10
2.2.3	Simplified Methods	11
2.3	Structure and Properties of Naked Clusters	12
2.3.1	The Theoretical Description of Metal Clusters	13
2.3.2	Structure, Bonding, and Stability	13
2.3.2.1	Geometrical Structures	13
2.3.2.2	The Jellium Model	17
2.3.2.3	Fluxionality	19
2.3.2.4	Stability and Fragmentation	19
2.3.2.5	Bond Lengths	21
2.3.2.6	Electron Delocalization in Clusters	22
2.3.3	Ionization Potentials and Electron Affinities	23
2.3.4	Electronic States, "Band Structure", and Band Gap	25
2.3.5	Optical Responses	28
2.3.6	Clusters in External Fields	31
2.3.6.1	Magnetic Behavior	31
2.3.6.2	Electric Polarizability	32
2.4	Structure and Properties of Ligated Clusters	33
2.4.1	The Metal-Ligand Interactions	33
2.4.2	Structures and Bond Lengths	36
2.4.2.1	Geometrical Structures	36
2.4.2.2	Metal-Metal Bond Lengths	43
2.4.2.3	The Ligand Polyhedron	47
2.4.3	Topological Relationships and Simplified Bonding Models	49
2.4.3.1	The Effective Atomic Number (EAN) Rule	49

2.4.3.2	The Polyhedral Skeletal Electron Pair (PSEP) Model	50
2.4.3.3	Topological Electron Counting (TEC)	51
2.4.3.4	Electron Counting Based on the Extended Hückel Approach	51
2.4.3.5	Clusters Stabilized by s-s Interactions: A Unified View	53
2.4.4	Quantum Chemistry of Organometallic Clusters: A Deeper Look into the Bonding	56
2.4.4.1	Semiempirical Calculations	56
2.4.4.2	Limitations of Simplified Approaches	56
2.4.4.3	Bare Versus Ligated Clusters: The Effect of the Ligands	57
2.4.4.4	Ligand-Field Effects in Clusters	60
2.4.4.5	The Strength of the Metal-Metal Bonds	61
2.4.4.6	Clusters with Interstitial Atoms	62
2.4.5	Physical Measurements and Chemical Bonding	64
2.4.5.1	Photoelectron Spectroscopy	64
2.4.5.2	Optical Spectroscopy	68
2.4.5.3	Magnetic Susceptibility Measurements	69
2.4.5.4	ESR Spectra	72
2.4.5.5	NMR Spectra	74
2.4.5.6	Specific Heat	75
2.4.5.7	Redox Properties	75
2.5	Conclusions	76
2.5.1	The Role of Theory in Clusters Research	76
2.5.2	On the Analogy between Metal Clusters and Surfaces	78
	References	80
3	Clusters in Ligand Shells	89
3.1	Introduction (<i>D. Fenske, G. Longoni and G. Schmid</i>)	89
3.2	Low-valent Organometallic Clusters (<i>G. Longoni and M. C. Iapalucci</i>)	91
3.2.1	Interplay Between Electronic and Steric Factors in the Growth of Transition Metal Molecular Clusters in Ligand Shells	91
3.2.2	Bonding and Spectroscopic Behavior of Carbon Monoxide	95
3.2.3	Stereochemical Non-rigidity of Clusters in Ligand Shells	99
3.2.4	Homo- and Heterometallic Transition Metal Clusters	105
3.2.4.1	Synthesis of High Nuclearity Clusters by Ligand Elimination	107
3.2.4.2	Synthesis of Higher Nuclearity Clusters by Elimination of Metal Fragments	112
3.2.4.3	Synthesis of Higher Nuclearity Clusters by Redox Processes	113
3.2.4.4	Structural Features of Homo- and Heterometallic Clusters	121
3.2.5	Transition Metal Clusters Containing Main Group Elements	132
3.2.5.1	Overview of the Synthetic Methods and Spectroscopic Characteristics of Transition Metal Clusters Containing Interstitial or Exposed Main Group Elements	135

3.2.5.2	Overview of the Synthetic Methods of Mixed Clusters and Main Group Element Clusters Containing Transition Metal Atoms . . .	147
3.2.5.3	Structural Characteristics of Transition Metal Clusters Containing Interstitial or Exposed Main Group Elements or Elemental Organic Fragments	148
3.2.6	Clusters of Clusters and Beyond	154
3.2.7	Conclusion	165
	References	166
