

Glassy Metals III

Amorphization Techniques, Catalysis,
Electronic and Ionic Structure

Edited by H. Beck and H.-J. Güntherodt

With Contributions by

A. Baiker A.S. Bakai H. Beck J. Eckert
H.J. Fecht H.-J. Güntherodt P. Häussler
W.L. Johnson K. Samwer L. Schultz

With 145 Figures

Springer-Verlag

Berlin Heidelberg New York
London Paris Tokyo

Contents

1. Introduction

By H. Beck and H.-J. Güntherodt	1
1.1 Amorphization in Metallic Systems.	1
1.2 Mechanically Alloyed Glassy Metals.	2
1.3 Catalysis	2
1.4 Interrelation Between Electronic and Ionic Structure in Metallic Glasses	3
1.5 Polycluster Concept of Amorphous Solids.	3
References	4

2. Amorphization in Metallic Systems

By K. Samwer, H.J. Fecht, and W.L. Johnson (With 26 Figures). . .	5
2.1 Introductory Remarks	5
2.1.1 Historical Background	5
2.1.2 Thermodynamics of Metastable Phase Equilibria and Metastable Phase Diagrams.	7
2.1.3 Kinetic Constraints and Required Timescales	16
2.2 Experimental Results	18
2.2.1 Hydrides	18
2.2.2 Diffusion Couples.	24
a) Summary of Experimental Observations of SSAR.	25
b) Theoretical Discussion—Diffusion Couples.	38
2.2.3 Irradiation-Driven Systems	53
2.2.4 Grinding of Intermetallic Compounds.	54
2.2.5 Pressure Application	57
2.3 Discussion and Summary.	59
2.3.1 Relation Between Solid-State Amorphization and Melting.	59
2.3.2 Melting Kinetics	61
2.3.3 Related Topics	61
References	64

3. Mechanically Alloyed Glassy Metals

By L. Schultz and J. Eckert (With 46 Figures).	69
3.1 Background.	69
3.2 The Mechanical Alloying Process.	70

3.3 Glass Formation by Mechanical Alloying	72
3.3.1 Basic Principles	72
3.3.2 The Process of Glass Formation by Mechanical Alloying	73
3.4 Structural Characterization	86
3.5 Glass-Forming Ranges	91
3.6 Glass-Forming Ability	94
3.7 Special Systems and Applications	99
3.7.1 Boron-Containing Alloys and Nd-Fe-B	99
3.7.2 Sm-Fe-X Alloys – New Permanent Magnets	103
3.8 Formation of Quasicrystals and Milling-Induced Phase Transitions	107
3.8.1 Basic Principles	107
3.8.2 Development of the Microstructure, Formation of the Quasicrystalline Phase, and Formation Range	109
3.8.3 Influence of the Milling Intensity – Milling-Induced Phase Transitions	113
3.9 Conclusions	116
References	117
 4. Glassy Metals in Catalysis	
By A. Baiker (With 21 Figures)	121
4.1 Preparation of Glassy Metals for Catalytic Studies	121
4.2 Motivation for Using Glassy Metals in Catalysis	123
4.3 Glassy Metals as Catalytically Active Materials	124
4.3.1 Studies of Glassy Metals in As-quenched State	124
a) Surface Structure and Electronic Properties	124
b) Catalytic Studies	130
4.3.2 Glassy Metals as Precursors of Catalytically Active Materials	131
a) Oxidation/Reduction Treatment of Precursor	132
b) Transformation of Precursor Under Reaction Conditions	143
c) Chemical Etching of Precursor	151
4.4 Factors Influencing Structural and Chemical Properties of Catalysts Derived from Glassy Metals	152
4.4.1 Chemical Composition	152
4.4.2 Chemical and Structural Homogeneity	153
4.4.3 Thermal Stability and Crystallization Behavior	154
4.4.4 Oxidation Behavior	155
4.4.5 Dissolution of Gases in Glassy Metals	156
4.4.6 Segregation Phenomena	157
4.5 Conclusions and Outlook	157
References	160

5. Interrelations Between Electronic and Ionic Structure in Metallic Glasses

By P. Häussler (With 31 Figures)	163
5.1 Introductory Remarks	163
5.2 Preparation	165
5.3 Theoretical Background	166
5.3.1 Structure and Stability	166
5.3.2 Electronic States	168
5.3.3 Collective Excitations	170
5.4 Crystalline Electron Phases	172
5.5 Nonmagnetic Amorphous Alloys	173
5.5.1 Structure	173
a) k -space	174
b) r -space	175
5.5.2 Stability	178
a) Glass-Forming Ability	180
b) Thermal Stability	180
5.5.3 Electronic Density of States	181
a) Photoelectron Spectroscopy	182
b) Electronic Specific Heat	187
c) Magnetic Susceptibility	188
5.5.4 Electronic Transport	188
a) Versus Composition	189
b) Scaling Behaviour Versus $\bar{Z}$	194
c) Versus Temperature	194
5.5.5 Dynamic Properties, Low-Lying Excitations	196
5.6 Magnetic Amorphous Alloys	198
5.6.1 Structure	199
5.6.2 Magnetism and Stability	199
5.7 Concluding Remarks	202
References	204

6. The Polycluster Concept of Amorphous Solids

By A.S. Bakai (With 21 Figures)	209
6.1 From the History of the Subject	210
6.2 Glass Formation: General Consideration	211
6.3 Some Experimental Data on the Structure of Real Metallic Glasses	214
6.4 Polycluster Structures	217
6.4.1 Local Order	217
6.4.2 LRC's and Polyclusters	219
6.4.3 Short-Range Order (SRO) and MRO	220
6.4.4 Structure Defects	222
6.4.5 Polycluster and Other Models	225
6.5 LO in Real Metallic Glasses	227
6.6 Low Energy Excitations and Tunneling States	228

6.7	Diffusion	232
6.8	Boundary Melting and the Glass–Liquid Transition	234
6.9	Mechanical Properties of Polyclusters	236
6.9.1	Anelastic Deformation	236
6.9.2	Yield Stress of a Polycluster.	237
6.9.3	Shear Band Formation.	237
6.9.4	Thermally Activated Slip	238
6.9.5	Diffusion-Viscous Flow	239
6.9.6	The Map of Mechanical States of Polyclusters.	240
6.10	Theory of Supercooled Liquid Solidification.	240
6.10.1	The Set of Structure States of Solid-State Clusters	241
6.10.2	Structure State Density (SSD)	242
6.10.3	Space of Structure States	242
6.10.4	Free Energy of the Cluster	244
6.10.5	The Rate of Cluster Nucleation and the Kinetic Criterion of the Glass Transition	246
6.10.6	A Mixed Heterophase State and Structure Relaxation Times	248
6.10.7	Discussion.	251
6.11	Conclusion	252
