

Contents

Introduction	1
<i>Chapter 1</i>	
Elliptic boundary value problems in domains with smooth boundary	4
§ 1. Elliptic boundary value problems	4
§ 2. Elliptic problems with a parameter	11
<i>Chapter 2</i>	
Dirichlet and Neumann problems for the Laplace operator in plane domains with corner points at the boundary	21
§ 1. Generalized solutions of the Dirichlet and Neumann problems in domains with corner points. Deviations from the “usual” properties of solutions	21
§ 2. Solvability and asymptotics of solutions of model problems in a strip and in an angle	24
§ 3. The Dirichlet problem in a bounded domain with a corner point	31
§ 4. The Neumann problem in a bounded domain with a corner point	38
<i>Chapter 3</i>	
General elliptic boundary value problems in a cylinder and in a cone	43
§ 1. Solvability and asymptotics of solutions of boundary value problems in a cylinder with the coefficients constant along the axis	43
§ 2. Calculation of the coefficients $c_v^{(k,j)}$ in the asymptotics of the solution	49
§ 3. Asymptotics of the solutions of boundary value problems in a cylinder with right-hand side of a special form	53
§ 4. Solvability and asymptotics of solutions of the boundary value problems with periodic coefficients	55
§ 5. Boundary value problems in a cone	63
§ 6. Estimates and asymptotics of solutions in L_p and Hölder classes	74
§ 7. Fundamental solutions of the boundary value problem in a cone	82
§ 8. Two examples: The Dirichlet problem and the oblique derivative problem	92
<i>Chapter 4</i>	
General elliptic problems in domains with conical points	97
§ 1. The Fredholm property	97
§ 2. Asymptotics of solutions near conical points	105

§ 3. Expressions for the coefficients in asymptotic formulas. Properties of the index	109
§ 4. Asymptotics of fundamental solutions	117
§ 5. Boundary value problems in spaces with nonhomogeneous norms	127

Chapter 5

Self-adjoint problems in domains with outlets to infinity	144
§ 1. Self-adjoint problems in domains with cylindrical outlets to infinity	144
§ 2. Special choices of Jordan chains of self-adjoint operator pencils	148
§ 3. Waves, scattering matrices and intrinsic radiation conditions	156
§ 4. Energetic solutions and the polarization matrix	161
§ 5. The extensions of the symmetric operator	175
§ 6. On a problem of the scattering of electro-magnetic waves	181
§ 7. Elasticity problems in domains having cylindrical outlets to infinity	192
§ 8. Stokes and Navier–Stokes problems in domains with cylindrical outlets to infinity	214

Chapter 6

Self-adjoint problems in domains with conical points. Applications	222
§ 1. Self-adjoint problems. Properties of their pencils	222
§ 2. The generalized Green formula, radiation conditions	229
§ 3. Self-adjoint extensions in spaces with weighted norms	236
§ 4. Boundary value problems in domains with compact complement. The polarization matrix	241
§ 5. Asymptotic analysis of the problem in domains with small holes	248
§ 6. Two problems in plates theory	263

Chapter 7

Applications to crack theory	271
§ 1. Stress singularities at a crack tip	271
§ 2. The rupture criterion	279
§ 3. The Cherepanov–Rice integral	286
§ 4. On the structure of the spectrum of the pencil generated by a self-adjoint problem in a plane domain with a crack	290

Chapter 8

Elliptic problems in domains with smooth edges	298
§ 1. Statement of the problem. Model problems	298
§ 2. Analysis of the model problems	302
§ 3. The Fredholm property of the elliptic problem in a bounded domain	308
§ 4. The Dirichlet and the Neumann problems for self-adjoint systems	311
§ 5. L_p -estimates of solutions	319
§ 6. Estimates of solutions in weighted Hölder classes	326

*Chapter 9***Elliptic problems on manifolds with intersecting edges** 337

- § 1. Manifolds of the class \mathfrak{D} 337
- § 2. Differential operators on class \mathfrak{D} manifolds 344
- § 3. The function spaces 351
- § 4. Statement of the boundary problems. Model problems 354
- § 5. Boundary value problems on class \mathfrak{D} manifolds 360
- § 6. The Dirichlet and Neumann problems for self-adjoint systems 363

*Chapter 10***Asymptotics of solutions of the Dirichlet problem for the Laplace operator in a three-dimensional domain having edges on the boundary** 384

- § 1. Asymptotics of solution near smooth edges 384
- § 2. Asymptotics of solutions near the singular point having the type of the vertex of a polyhedron 388
- § 3. Formulas for coefficients in asymptotics of solutions near an edge 392

*Chapter 11***The asymptotics of solutions of general problems near edges** 396

- § 1. Guidelines for constructing asymptotics. Auxiliary assertions 397
- § 2. The asymptotics of solutions near an edge (in case of a smooth right-hand side) 404
- § 3. Asymptotics of solutions near an edge (general case) 410
- § 4. Corollaries of asymptotic formulas 430

*Chapter 12***Self-adjoint problems with radiation conditions on the edges** 441

- § 1. Setting of boundary value problems and information about the asymptotics of solutions 441
- § 2. The generalized Green formula. Fredholm property of the problem with radiation conditions 444
- § 3. Solvability conditions for the problem with radiation conditions in terms of the generalized Green formula 454
- § 4. Intrinsic radiation conditions on the edge 465
- § 5. Energetic radiation conditions. The polarization operator on the edge 477
- § 6. The scattering operator. The formula for the increment of the dimension of the kernel of the operator of the problem generated by the variation of the weight factor 485
- § 7. Sobolev problems 497
- § 8. The three-dimensional problem of crack mechanics 504
