

Table of Contents

Editorial Introduction	ix
 <i>M.S. Livsic, A.S. Markus</i>	
Joint spectrum and discriminant varieties of commuting nonselfadjoint operators	1
1. Introduction	1
2. Joint spectra of commuting operators with compact imaginary parts	3
3. Colligations and vessels	14
4. The discriminant varieties	20
References	29
 <i>D. Alpay, L. Baratchart, A. Gombani</i>	
On the differential structure of matrix-valued rational inner functions	30
1. Introduction and preliminaries	31
2. The differential structure of I_n^p	37
3. Charts using Schur algorithm	52
4. Conclusion	61
References	62
 <i>J.A. Ball</i>	
Conservative dynamical systems and nonlinear Livsic-Brodskii nodes	67
Introduction	67
1. Conservative systems	69
2. Nonlinear Livsic-Brodskii nodes: models for a given dynamics up to energy preserving diffeomorphic change of variable	77
3. Other partitionings of the cast of characters into knowns and unknowns	83
References	91
 <i>A. Ben-Artzi, I. Gohberg</i>	
Orthogonal polynomials over Hilbert modules	96
1. Introduction	96
2. Orthogonalization with invertible squares	99
3. Preliminaries on inertia theorems for unilateral shifts	107
4. The main result	111
References	126

R. Bhatia, C. Davis

Relations of linking and duality between symmetric gauge functions	127
1. Introduction	127
2. Linked symmetric gauge functions	130
3. Quotient of symmetric gauge functions	131
4. Q-norms	135
References	137

G. Christner, K.Y. Li, J. Rovnyak

Julia operators and coefficient problems	138
1. Introduction	138
2. Julia operators for triangular matrices	141
3. Multiplication transformations on power series	150
4. Extension problem for substitution transformations	159
Appendix. Formal algebra	176
References	179

H. Dym

Shifts, realizations and interpolation, Redux	182
1. Introduction	183
2. Formulas and facts	185
3. R_α variance	191
4. Realizations	197
5. Reproducing kernel spaces	199
6. $\mathcal{H}(S)$ spaces	205
7. A basic interpolation problem	208
8. Factorization and recursive methods	219
9. Characteristic functions	228
References	239

A. Feintuch

Arveson's distance formulae and robust stabilization for linear time-varying systems	244
1. Introduction	244
2. Preliminaries	245
3. Stabilization and proper representations	246
4. Robust stabilization: Proper representation uncertainty	249
5. Gap metric robustness	253
Bibliography	254

P. Fillmore, M. Khalkhali

Entire cyclic cohomology of Banach algebras	256
1. Background	256
2. Definitions	258
3. Results	260
References	262

P.A. Fuhrmann

The bounded real characteristic function and Nehari extensions	264
1. Introduction	264
2. Bounded real functions	266
3. Hankel operators	272
4. State space realizations	288
5. Suboptimal Nehari extensions	294
References	312

L. Hanin

On isometric isomorphism between the second dual to the "small"

Lipschitz space and the "big" Lipschitz space	316
The Kantorovich-Rubinstein norm	318
Completion of the space of measures in the KR norm	319
Critical and noncritical metric spaces	323
References	324

J.W. Helton, J.J. Wavrik

Rules for computer simplification of the formulas in operator model theory and linear systems

I. Introduction	325
II. The reduction and basis algorithms	326
III. Operator relations with finite basis for rules	327
IV. Operator relations with infinite basis for rules	334
V. A new algebra containing the functional calculus of operator theory	335
VI. Gröbner basis property	340
VII. Summary of practical rules you might use	347
References	351
	354

V. Khatskevich

Some global properties of fractional-linear transformations

Preliminaries	355
1. The case of invertible plus-operators	355
2. The general case of a non-invertible operator U	356
References	359
	361

E. Nordgren, P. Rosenthal

Boundary values of Berezin symbols	362
1. Introduction	362
2. Compactness criterion	363
3. Continuous Berezin symbols	367
4. Two questions	367
References	368

M. Rosenblum

Generalized Hermite polynomials and the bose-like oscillator calculus	369
1. Introduction	369
2. Generalized Hermite polynomials	370
3. The generalized Fourier transform	377
4. Generalized translation	384
5. The Bose-like oscillator	388
References	395

N. Zobin, V. Zobina

A general theory of sufficient collections of norms with a prescribed semigroup of contractions	397
Introduction	397
1. Formulation of the problem	398
2. Notions	399
3. Formulations of results	399
4. Proofs of results	403
References	415
