

Contents

1. Introduction	1
1.1 The History of the Search for Periodic Solutions of the Korteweg - de Vries Equation	1
1.2 Outline of the Content of This Book	5
2. Riemann Surfaces and Theta Functions	13
2.1 Riemann Surfaces	13
2.2 Coverings	18
2.3 Elliptic Curves	21
2.4 Functions, Differentials and Integrals on Riemann Surfaces	23
2.4.1 General Properties of Functions on Riemann Surfaces	23
2.4.2 Abelian Differentials	24
2.4.3 Periods of Abelian Differentials	26
2.4.4 Period Matrix. Jacobian Variety	29
2.4.5 Divisors	31
2.5 Abelian Functions and Theta Functions	34
2.6 Addition Theorems for Theta Functions	38
2.7 Construction of Functions and Differentials on a Riemann Surface Using Theta Functions	41
2.8 Hyperelliptic Curves	46
A.2.1 Uniformization of Riemann Surfaces	52
3. Finite-Gap Solutions of the Kadomtsev-Petviashvili and the Korteweg - de Vries Equations	57
3.1 Differential Equations for the Baker-Akhiezer Functions	57
3.2 Solution of the Kadomtsev-Petviashvili Equation	60
3.3 Real Non-Singular Solutions of the KP1 and KP2 Equations	62
3.4 Reduction to Korteweg - de Vries and Boussinesq Equations	64
3.5 Spectral Properties of the Finite-Gap Solutions	67
3.6 Spectral Properties of the Schrödinger Operator with a Finite-Gap Periodic Potential	76
3.6.1 Monodromy Matrix and Bloch Solutions	

	of the Hill Equation	76
3.6.2	Finite-Gap Potentials and the Gelfand-Levitan-Dikii Trace Formulas	79
3.6.3	Criterion for the Periodic Potential to be Finite-Gap	80
3.6.4	Charles Hermite and the Lamé Equation	81
3.6.5	Analytical Properties of the Bloch Functions and the Inverse Spectral Problem for Finite-Gap Potentials	82
3.6.6	Jules Drach and General Finite-Gap Potentials	84
4.	Vector Valued Baker-Akhiezer Functions and Finite-Gap Solutions of the Nonlinear Schrödinger and Sine-Gordon Equations	87
4.1	Finite-Gap Solutions of the Nonlinear Schrödinger Equation	87
4.2	Finite-Gap Solutions of the Sine-Gordon Equation	95
4.3	Reality Conditions. Reduction of the NS System to the Nonlinear Schrödinger Equation	106
4.3.1	NS Equation. Reduction $y^* = \bar{y}$	106
4.3.2	NS Equation with Attraction. Reduction $y^* = -\bar{y}$	110
4.3.3	Sine-Gordon Model. Reality Condition $v = \bar{v}$	113
4.4	Degeneracy of Finite-Gap Solutions. Multi-Soliton Solutions	117
4.5	Partial Degeneracy of the Finite-Gap Formulas. Multi-Phase Modulations of the Cnoidal Wave	131
4.6	Alternative Approach to the Finite-Gap Integration of Matrix Systems	143
5.	Uniformization of Riemann Surfaces and Effectivization of Theta Function Formulas	151
5.1	The Schottky Uniformization	151
5.2	Convergence of Poincaré Series	154
5.3	Schottky Uniformization of Riemann Surfaces of the Decomposition Type	156
5.4	Schottky Uniformization of the M-Curves	157
5.5	Solutions of the KP2 Equation	160
5.6	Solutions of the KP1 Equation	165
5.7	Multi-Soliton Solutions and Small-Amplitude Waves	168
5.8	Solutions of the KdV Equation	170
5.9	Qualitative Analysis of Solutions of the KdV Equation	174
5.10	Solutions of the Sine-Gordon Equation	177
5.11	Uniformization and Coverings	181
A.5.1	Description of the Schottky Space of M-Curves	185

6. Theta Function Formulas for Classical Tops	189
6.1 The Lax Equation and Analytic Properties of the Baker-Akhiezer Function	189
6.2 Integrable Systems	191
6.3 Kowalewski Top	193
6.3.1 Kowalewski's Paper	193
6.3.2 The Lax Pair for the Kowalewski Top	194
6.3.3 The Spectral Curve	195
6.3.4 Analyticity Properties of the Baker-Akhiezer Function	197
6.3.5 Explicit Formulas for the Baker-Akhiezer Function	199
6.3.6 The Prym Condition	201
6.3.7 The Poisson Vector	202
6.3.8 The Geometry of Liouville Tori	204
6.3.9 Reduction to Two-Dimensional Theta Functions	205
6.4 The Goryachev-Chaplygin Top	206
6.4.1 The Lax Pair for the Goryachev-Chaplygin Top	207
6.4.2 The Spectral Curve	208
6.4.3 Analytic Properties of the Baker-Akhiezer Function	209
6.4.4 Construction of the Baker-Akhiezer Function	211
6.4.5 Formulas for Dynamical Variables	212
6.5 Integration of the Lax Representations with the Spectral Parameter on an Elliptic Curve. XYZ Landau-Lifshitz Equation	214
6.6 Curves of Lower Genera. The Euler Case and the Neumann System	219
6.7 Manakov and Clebsch Cases	222
6.8 The Steklov Cases	224
6.9 Complete Description of Motion in the Rest Frame	228
7. Algebro-Geometric Principles of Superposition of Finite-Gap Solutions of Integrable Nonlinear Equations	233
7.1 The Simplest Reduction Case	234
7.2 Poincaré Theorem	236
7.3 Coverings of Genus 2 Over a Torus. Humbert Varieties	240
7.4 Expression of Moduli for a Genus 2 Curve in Terms of Theta Constants	243
7.5 Reduction Scheme for Genus 2	248
7.5.1 Choice of a Basis	248
7.5.2 Reduction Condition	250
7.5.3 Description of a Covering	251
7.5.4 Reduction of Holomorphic Differentials to Elliptic Ones	251
7.5.5 Description of Covers	251

7.5.6	Reduction of Abelian Differentials of the Second and Third Types	254
7.6	Example: 2- and 4-Sheeted Covers of Genus 2 over a Torus	254
7.6.1	2-Sheeted Covers	254
7.6.2	4-Sheeted Coverings	255
7.7	Elliptic Finite-Gap Potentials	259
7.8	Elliptic Solutions of the KdV Equation and Particle Dynamics	266
7.9	Elliptic Solutions of the Sine-Gordon Equation	274
7.10	On One Periodic Solutions of the Kowalewski Problem	277
7.11	Normal Coverings	281
7.12	The Appel Theorem	283
7.13	Reduction of the Theta Functions of Normal Coverings	285
7.14	Example: 3-Gap Solution of the Sine-Gordon Equation in Terms of Elliptic Functions	287
A.7.1	Relations Between Theta Constants for $g = 2$	293
A.7.2	Addition Formulas for Second-Order Theta Functions at $g = 2$	296
A.7.3	Theta Constants of 2- and 4-Sheeted Coverings Over a Torus	299
8.	An Application: The Peierls-Fröhlich Problem and Finite-Gap Potentials	303
8.1	Finite-Gap Potentials	303
8.2	The Peierls Problem	313
8.3	Theory of the Fröhlich Conductivity	321
8.4	Conclusion	327
	References	329
