Composite Particle Dynamics in Quantum Field Theory

Contents

Notation	1
1 The Spinorfield Model	4
1.1 Introduction	4
1.2 Spinorfield Regularization	5
1.3 Lagrange Formalism	10
1.4 Canonical Spinorfield Quantization	12
1.5 Superindexing	13
1.6 Symmetry Conditions	15
2 Covariant Quantum Field Dynamics	21
2.1 Introduction	21
2.2 Construction of Functional States	23
2.3 Symmetries in Functional Space	28
2.4 Functional Field Equations	33
2.5 Nonperturbative Normalordering	38
2.6 Vertex Renormalization	43
2.7 Limits of Covariant Formalism	45
3 Algebraic Schrödinger Representation	47
3.1 Introduction	47
3.2 Indefinite State Spaces	49
3.3 Probability Interpretation	50
3.4 Nonorthogonal Basis Sets	51
3.5 Cyclic Basis Vector Representations	54
3.6 Renormalized Eigenvalue Equations	58
3.7 Functional Eigenvalue Equations	61
3.8 Normalordering	68
3.9 Covariant Equations on the Hyperplane	70
4 Weak Mapping Theorems	72
4.1 Introduction	72
4.2 Hard Core States	74
4.3 Selfconsistent Propagators	75
4.4 Effective Boson Dynamics	77
4.5 Direct and Exchange Forces	85
4.6 Estimate of Exchange Forces	90
4.7 Weak Mapping in Functional Space	95
4.8 Dressed Particle States	99
4.9 Effective Boson– and Composite Fermion–Dynamics	102

5	Bound State Calculations	106
5.1	Introduction	106
5.2	Covariant Bound State Equations	107
5.3	Vector Boson States	112
5.4	Four-Fermion Bound States	117
5.5	Dressed Fermion States	122
5.6	Metric of Dressed Fermion States	124
6	Effective Yang-Mills Dynamics	129
6.1	Introduction	129
6.2	Effective Boson-Fermion Dynamics	130
6.3	Boson States and Dual States	135
6.4	Evaluation of the Map	139
6.5	Quantum Properties of Mapped Fields	144
6.6	Effective Boson-Fermion Lagrangian	149
7	Fermions and Gravitation	153
7.1	Introduction	153
7.2	Anholonomic Spinor Connections	154
7.3	Weak Mapping with Gravitons	157
7.4	Graviton States	161
7.5	Dressed Fermion State Calculations	166
7.6	Fermion-Graviton Coupling	171
8	Weak Mapping and Gauge Fields	175
8.1	Introduction	175
8.2	Spinor Electrodynamics in Coulomb Gauge	176
8.3	Quantization of Spinor Electrodynamics	179
8.4	Composite Particle Dynamics	186
8.5	Nonabelian Quantum Fields in Temporal Gauge	191
9	Superconductivity and Higgs Fields	199
9.1	Introduction	199
9.2	Selfconsistent Propagators and States	200
9.3	Spectrum of Bound States	213
9.4	Ginzburg-Landau Equation	216
9.5	Electrical Resistance	220
9.6	Thermostates and Weak Mapping	221
10	Path Integrals and Effective Theories	229
10.1	Introduction	229
10.2	Functional Perturbation Theory and Path Integrals	229
10.3	Hadronization of QCD	233
10.4	Composite Particles and Field Operator Products	236
10.5	Evaluation of Fermion Determinants	242
10.6	Conclusions	248

11 Fock Space Mappings	251
11.1 Introduction	251
11.2 Ideal and Physical Boson Spaces	251
11.3 Usui Mappings	254
11.4 Boson Mapping and Effective Dynamics	256
Bibliography	260
Index	271
