## **Table of Contents**

| Chapter 1 | Introduction to the Role of Organic Acids in Geological Processes  M. D. Lewan and E. D. Pittman                                                                                             | 1   |
|-----------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----|
| Chapter 2 | Techniques and Problems in Sampling and Analyzing Formation Waters for Carboxylic Acids and Anions D. B. MacGowan and R. C. Surdam                                                           | 22  |
| Chapter 3 | Distribution and Occurrence of Organic Acids in Subsurface Waters P.D. Lundegard and Y.K. Kharaka                                                                                            | 40  |
| Chapter 4 | Organic Acids from Petroleum Source Rocks M. D. Lewan and J. B. Fisher                                                                                                                       | 70  |
| Chapter 5 | Material Balance Considerations for the Generation of Secondary Porosity by Organic Acids and Carbonic Acid Derived from Kerogen, Denver Basin, Colorado, USA E. D. Pittman and L. A. Hathon | 115 |
| Chapter 6 | Role of Soil Organic Acids in Mineral Weathering Processes J. I. Drever and G. F. Vance                                                                                                      | 138 |
| Chapter 7 | Chemistry and Mechanisms of Low-Temperature Dissolution of Silicates by Organic Acids P.C. Bennett and W. Casey                                                                              | 162 |
| Chapter 8 | Comparison and Evaluation of Experimental Studies on Dissolution of Minerals by Organic Acids A. Hajash, Jr.                                                                                 | 201 |
| Chapter 9 | Experimental Studies of Organic Acid Decomposition  I.L.S. Bell and D.A. Palmer                                                                                                              | 226 |
|           | J. L. S. Dell and D. A. Palmer                                                                                                                                                               | 220 |
