

Table of Contents

Preface	v
Introduction	1
 Part I: Orthogonal decompositions of complex simple Lie algebras	 11
 <i>Chapter 1</i>	
Type A_n	13
1.1 Standard construction of ODs for Lie algebras of type A_{p^m-1}	13
1.2 Symplectic spreads and J -decompositions	17
1.3 Automorphism groups of J -decompositions	25
1.4 The uniqueness problem for ODs of Lie algebras of type A_n , $n \leq 4$	31
1.5 The uniqueness problem for orthogonal pairs of subalgebras	37
1.6 A connection with Hecke algebras	49
Commentary	51
 <i>Chapter 2</i>	
The types B_n, C_n and D_n	56
2.1 Type C_n	56
2.2 Partitions of complete graphs and E -decompositions of Lie algebras of types B_n and D_n : automorphism groups	64
2.3 Partitions of complete graphs and E -decompositions of Lie algebras of types B_n and D_n : admissible partitions	68
2.4 Classification of the irreducible E -decompositions of the Lie algebra of type D_n	76
Commentary	81
 <i>Chapter 3</i>	
Jordan subgroups and orthogonal decompositions	84
3.1 General construction of TODs	84
3.2 Root orthogonal decompositions (RODs)	88
3.3 Multiplicative orthogonal decompositions (MODs)	93
Commentary	103

Chapter 4

Irreducible orthogonal decompositions of Lie algebras with special

Coxeter number	107
4.1 The irreducibility condition and the finiteness theorem	107
4.2 General outline of the arguments	110
4.3 Regular automorphisms of prime order and Jordan subgroups	113
4.4 $h+1=r$: the P -case	122
4.5 $h+1=r$: classification of IODs	125
4.6 A characterization of the multiplicative orthogonal decompositions of the Lie algebra of type D_4	131
4.7 The non-existence of IODs for Lie algebras of types C_p and D_p	136
Commentary	139

Chapter 5

Classification of irreducible orthogonal decompositions of complex simple

Lie algebras of type A_n	141
5.1 The S -case	142
5.2 The P -case. I. Generic position	144
5.3 The P -case. II. Affine obstruction	152
5.4 The P -case. III. Completion of the proof	158
Commentary	160

Chapter 6

Classification of irreducible orthogonal decompositions of complex simple

Lie algebras of type B_n	162
6.1 The monomiality of $G = \text{Aut}(\mathcal{D})$	163
6.2 Every IOD is an E -decomposition	168
6.3 Study of E -decompositions	176
Commentary	186

Chapter 7

Orthogonal decompositions of semisimple associative algebras

7.1 Definitions and examples	187
7.2 The divisibility conjecture	190
7.3 A construction of ODs	195
Commentary	198

Part II: Integral lattices and their automorphism groups	199
---	-----

Chapter 8

Invariant lattices of type G_2 and the finite simple $G_2(3)$	203
--	-----

8.1 Preliminaries	203
8.2 Invariant lattices in $\mathcal{L}$	208
8.3 Automorphism groups	216
Commentary	229

Chapter 9

Invariant lattices, the Leech lattice and even unimodular analogues of it in Lie algebras of type A_{p-1}	231
---	-----

9.1 Preliminary results	232
9.2 Classification of indivisible invariant lattices	241
9.3 Metric properties of invariant lattices	248
9.4 The duality picture	253
9.5 Study of unimodular invariant lattices	259
9.6 Automorphism groups of projections of invariant lattices	264
9.7 On the automorphism groups of invariant lattices of type A_{p-1}	273
Commentary	282

Chapter 10

Invariant lattices of type A_{p^m-1}	285
--	-----

10.1 Preliminaries	285
10.2 Classification of projections of invariant sublattices to a Cartan subalgebra	293
10.3 The structure of the $SL_2(q)$ -module $\Gamma^R/p\Gamma^R$	301
10.4 The structure of the $SL_2(q)$ -module $\Gamma^R/q^2\Gamma^R$	309
10.5 A series of unimodular invariant lattices	320
10.6 Reduction theorem: statement of results	326
10.7 Invariant lattices of type A_n : the imprimitive case	329
10.8 Invariant lattices of type A_n : the primitive case	339
Commentary	353

Chapter 11

The types B_{2^m-1} and D_{2^m}	355
--	-----

11.1 Preliminaries	356
11.2 Possible configurations of root systems	361
11.3 Automorphism groups of lattices: the classes $\mathcal{R}_1$ and $\mathcal{R}_2$	366
11.4 Lattices of nonroot-type: the case B_3	383
11.5 Lattices of nonroot-type: the case D_4	391

11.6 $\mathbb{Z}$ -forms of Lie algebras of types G_2 , B_3 and D_4	403
Commentary	408

Chapter 12

Invariant lattices of types F_4 and E_6, and the finite simple groups $L_4(3)$, $\Omega_7(3)$, Fi_{22}	409
--	-----

12.1 On invariant lattices of type F_4	410
12.2 Invariant lattices of type E_6 : the imprimitive case	411
12.3 Character computation	419
12.4 Invariant lattices of type E_6 : the primitive case	432
Commentary	439

Chapter 13

Invariant lattices of type E_8 and the finite simple groups F_3, $L_4(5)$	440
---	-----

13.1 The Thompson-Smith lattice	440
13.2 Statement of results	443
13.3 The imprimitive case	445
13.4 The primitive case	452
13.5 The representations of $SL_4(q)$ of degree $(q-1)(q^3-1)/2$	455
Commentary	469

Chapter 14

Other lattice constructions	471
--	-----

14.1 A Moufang loop, the Dickson form, and a lattice related to $\Omega_7(3)$	471
14.2 The Steinberg module for $SL_2(q)$ and related lattices	479
14.3 The Weil representations of finite symplectic groups and the Gow-Gross lattices	483
14.4 The basic spin representations of the alternating groups, the Barnes-Wall lattices, and the Gow lattices	487
14.5 Globally irreducible representations and some Mordell-Weil lattices	493
Commentary	504

Appendix	505
Bibliography	511
Notation	526
Author Index	529
Subject Index	531
