Contents

Part I. Elements of Convex Analysis	1
Chapter 1. Convex Bodies and Hypersurfaces	3
§1. <i>Convex Sets in Finite-Dimensional Euclidean Spaces</i>	3
1.1. Main Definition	3
1.2. Linear and Convex Operations with Convex Sets. Convex Hull	3
1.3. The Properties of Convex Sets in Linear Topological Spaces	7
1.4. Euclidean Space E^n	8
1.5. The Simple Figures in E^n	9
1.6. Spherical Convex Sets	10
1.7. Starshapedness of Convex Bodies	11
1.8. Asymptotic Cone	12
1.9. Complete Convex Hypersurfaces in E^{n+1}	13
§2. <i>Supporting Hyperplanes</i>	14
2.1. Supporting Hyperplanes. The Separability Theorem	14
2.2. The Main Properties of Supporting Hyperplanes	15
§3. <i>Convex Hypersurfaces and Convex Functions</i>	16
3.1. Convex Hypersurfaces and Convex Functions	16
3.2. Test of Convexity of Smooth Functions	19
3.3. Convergence of Convex Functions	20
3.4. Convergence in Topological Spaces	21
3.5. Convergence of Convex Bodies and Convex Hypersurfaces	22
§4. <i>Convex Polyhedra</i>	24
4.1. Definitions. Description of Convex Polyhedra by the Convex Hull of Their Vertices	24
4.2. Convex Hull of a Finite System of Points	26
4.3. Approximation of Closed Convex Hypersurfaces by Closed Convex Polyhedra	28
§5. <i>Integral Gaussian Curvature</i>	29
5.1. Spherical Mapping and the Integral Gaussian Curvature	29
5.2. The Convergence of Integral Gaussian Curvatures	33
5.3. Infinite Convex Hypersurfaces	35
§6. <i>Supporting Function</i>	36
6.1. Definition and Main Properties	36
6.2. Differential Geometry of Supporting Function	41
Chapter 2. Mixed Volumes. Minkowski Problem. Selected Global Problems in Geometric Partial Differential Equations	54

§7. <i>The Minkowski Mixed Volumes</i>	54
7.1. Linear Combinations of Sets in E^{n+1}	54
7.2. Exercises and Problems to Subsection 7.1	58
7.3. Minkowski Mixed Volumes for Convex Polyhedra.....	59
7.4. The Minkowski Mixed Volumes for General Bounded Convex Bodies	63
7.5. The Brunn–Minkowski Theorem. The Minkowski Inequalities	66
7.6. Alexandrov's and Fenchel's Inequalities	72
§8. <i>Selected Global Problems</i> <i>in Geometric Partial Differential Equations</i>	75
8.1. Minkowski's Problem for Convex Polyhedra in E^{n+1}	75
8.2. The Classical Minkowski Theorem	80
8.3. General Elliptic Operators and Equations	86
8.4. Linear Elliptic Operators and Equations	87
8.5. Quasilinear Elliptic Operators and Equations	88
8.6. The Classical Monge–Ampere Equations	89
8.7. Differential Equations in Global Problems of Differential Geometry	90
8.8. The Classical Maximum Principles for General Elliptic Equations	95
8.9. Hopf's Maximum Principle for Uniformly Elliptic Linear Equations	98
8.10. Uniqueness Theorem for General Nonlinear Elliptic Equations	100
8.11. The Maximum Principle for Divergent Quasilinear Elliptic Equations.....	103
8.12. Uniqueness Theorem for Isometric Embeddings of Two-dimensional Riemannian Metrics in E^3	105
Part II. Geometric Theory of Elliptic Solutions of Monge–Ampere Equations	109
Chapter 3. Generalized Solutions of N -Dimensional Monge–Ampere Equations	113
§9. <i>Normal Mapping and R-Curvature of Convex Functions</i>	113
9.1. Some Notation	113
9.2. Normal Mapping	113
9.3. Convergence Lemma of Supporting Hyperplanes	114
9.4. Main Properties of the Normal Mapping of a Convex Hypersurface.....	115
9.5. Proofs.....	116
9.6. R -curvature of convex functions.....	118
9.7. Weak convergence of R -curvatures	118

§10. The Properties of Convex Functions Connected with Their R-Curvature.....	123
10.1. The Comparison and Uniqueness Theorems.....	123
10.2. Geometric Lemmas and Estimates.....	125
10.3. The Border of a Convex Function.....	127
10.4. Convergence of Convex Functions in a Closed Convex Domain. Compactness Theorems.....	129
§11. Geometric Theory of the Monge–Ampere Equations	
$\det(u_{ij}) = \varphi(x)/R(Du)$.....	146
11.1. Introduction. Obstructions and Necessary Conditions of Solvability for the Dirichlet Problem.....	146
11.2. Generalized and Weak Solutions for Equation (11.1).....	148
11.3. The Dirichlet Problem in the Set of Convex Functions $Q(A_1, A_2, \dots, A_k)$	150
11.4. Existence and Uniqueness of Weak Solutions of the Dirichlet Problem for Monge–Ampere Equations $\det(u_{ij}) = \varphi(x)/R(Du)$	153
11.5. The Inverse Operator for the Dirichlet Problem.....	159
11.6. Hypersurfaces with Prescribed Gaussian Curvature.....	161
§12. The Dirichlet Problem for Elliptic Solutions of Monge–Ampere Equations $\det(u_{ij}) = f(x, u, Du)$.....	166
12.1. The First Main Existence Theorem for the Dirichlet Problem (12.1–2).....	167
12.2. Existence of at Least One Generalized Solution of the Dirichlet Problem for Equations $\det(u_{ij}) = f(x, u, Du)$	170
12.3. Existence of Several Different Generalized Solutions for the Dirichlet Problem (12.23–24).....	173
Chapter 4. Variational Problems and Generalized Elliptic Solutions of Monge–Ampere Equations.....	182
§13. Introduction. The Main Functional.....	182
13.1. Statement of Problems.....	182
13.2. Preliminary Considerations.....	183
13.3. The Functional $I_H(u)$ and its Properties.....	184
§14. Variational Problem for the Functional $I_H(u)$.....	189
14.1. Bilateral Estimates for $I_H(u)$	189
14.2. Main Theorem about the Functional $I_H(u)$	192
§15. Dual Convex Hypersurfaces and Euler’s Equation.....	193
15.1. Special Map on the Hemisphere.....	194
15.2. Dual Convex Hypersurfaces.....	194

15.3. Expression of the Functional $I_H(u)$ by Means of Dual Convex Hypersurfaces	198
15.4. Expression of the Variation of $I_H(u)$	200
Chapter 5. Non-Compact Problems for Elliptic Solutions of Monge–Ampere Equations.	204
§16. <i>Introduction. The Statement of the Second Boundary Value Problem</i>	204
16.1. Asymptotic Cone of Infinite Complete Convex Hypersurfaces	204
16.2. The Statement of the Second Boundary Value Problem	205
§17. <i>The Second Boundary Value Problem for Monge–Ampere Equations $\det(u_{ij}) = \frac{g(x)}{R(Du)}$</i>	207
17.1. The Necessary and Sufficient Conditions of Solvability of the Second Boundary Value Problem	207
17.2. The Second Boundary Value Problem in the Class of Convex Polyhedra	208
§18. <i>The Second Boundary Value Problem for General Monge–Ampere Equations</i>	212
18.1. The Main Assumptions	212
18.2. The Statement of the Main Theorem and the Scheme of its Proof	213
18.3. The Function Space of the Second Boundary Value Problem	214
18.4. The Proof of Theorem 18.1	218
Chapter 6. Smooth Elliptic Solutions of Monge–Ampere Equations	226
§19. <i>The N-Dimensional Minkowski Problem</i>	226
19.1. Introduction	226
19.2. A Priori Estimates for the Radii of Normal Curvature of a Convex Hypersurface	228
19.3. Auxiliary Concepts and Formulas Obtained by E. Calabi [1] and A. Pogorelov [3]	231
19.4. An A Priori Estimate for the Third Derivatives of a Support Function of a Convex Hypersurface	235
19.5. The Proof of Theorem 19.3	238
§20. <i>The Dirichlet Problem for Smooth Elliptic Solutions of N-Dimensional Monge–Ampere Equations</i>	241
20.1. The Uniqueness and Comparison Theorems	242
20.2. C^0 -Estimates for Solutions $u(x) \in C^2(\overline{G})$ of the Dirichlet Problem (20.2) by Subsolutions	244
20.3. Geometric Estimates of Convex Solutions for Monge–Ampere Equations	252

20.4. Geometric Estimates of the Gradient of Convex Solutions for Monge–Ampere Equations	260
20.5. The Dirichlet Problem for the Monge–Ampere Equation $\det(u_{i\bar{j}}) = \psi(x)$	264
20.6. A Priori Estimates for Derivatives up to Second Order	266
20.7. Calabi’s Interior Estimates for the Third Derivatives	271
20.8. One-Sided Estimates at the Boundary for some Third Derivatives.....	275
20.9. An Important Lemma	277
20.10. Completion of the Proof of Theorem 20.8.....	280
20.11. More General Monge–Ampere equations	283

**Part III. Geometric Methods in Elliptic Equations
of Second Order. Applications to Calculus
of Variations, Differential Geometry
and Applied Mathematics.....** 285

**Chapter 7. Geometric Concepts and Methods
in Nonlinear Elliptic Euler–Lagrange Equations** 287

**§21. Geometric Constructions. Two-Sided C^0 -Estimates
of Functions with Prescribed Dirichlet Data** 288

21.1. Geometric Constructions

21.2. Convex and Concave Supports
of Functions $u(x) \in W_2^n(B) \cap C(\bar{B})$

21.3. Two-sided C^0 -Estimates for Functions $u(x) \in W_2^n(B) \cap C(\bar{B})$...

**§22. Applications to the Dirichlet Problem
for Euler–Lagrange Equations.....** 297

**§23. Applications to Calculus of Variations, Differential Geometry
and Continuum Mechanics.....** 303

23.1. Applications to Calculus of Variations

23.2. Applications to Differential Geometry.....

23.3. Applications to Continuum Mechanics

**§24. C^2 -Estimates for Solutions
of General Euler–Lagrange Elliptic Equations** 312

24.1. Introduction.....

24.2. Monge–Ampere Generators

24.3. Assumptions Related to General Euler–Lagrange Equations

24.4. Two-sided Estimates for Solutions
of Nonlinear Elliptic Euler–Lagrange Equations

24.5. The Second Type of C^0 -Estimates for Solutions
for General Elliptic Euler–Lagrange Equations

**Chapter 8. The Geometric Maximum Principle
for General Non-Divergent Quasilinear Elliptic Equations** 339

§25. <i>The First Geometric Maximum Principle for Solutions of the Dirichlet Problem for General Quasilinear Equations</i>	341
25.1. The First Geometric Maximum Principle for General Quasilinear Elliptic Equations and Linear Elliptic Equations of the Form	341
25.2. The Improvement of Estimates (25.16) for Solutions of General Quasilinear Elliptic Equations Depending on Properties of the Functions $\det(a_{ik}(x, u, p))$ and $b(x, u, p)$	362
25.3. The Improvement of Estimate (25.106–107) and (25.113) for Solutions $u(x) \in W_2^n(B) \cap C(\overline{B})$ of the Dirichlet Problem for Euler–Lagrange Equations	377
25.4. Final Remarks Relating to Subsections 25.2 and 25.3	380
25.5. Polar Reciprocal Convex Bodies. Estimates and Majorants for Solutions of the Dirichlet Problems (25.119–120) and (25.186–187) depending on $\text{vol}(CoB)$	380
§26. <i>The Geometric Maximum Principle for General Quasilinear Elliptic Equations (Continuation and Development)</i>	384
26.1. The Main Assumptions	385
26.2. Concepts and Notations Related to Solutions of the Dirichlet Problem (26.1–2)	386
26.3. The Development of Techniques Related to Functions $Q_\alpha(p)$ and $R(p)$	388
26.4. The Main Estimates for Solutions of Problem (26.1–2) if $R(p)$ Satisfies (26.9-a)	390
26.5. Uniform Estimates for Solutions of the Dirichlet Problem (26.1–2) (Continuation and Development of Subsection (26.4)	395
26.6. Comments to the Modified Condition C.2	402
§27. <i>Pointwise Estimates for Solutions of the Dirichlet Problem for General Quasilinear Elliptic Equations</i>	405
27.1. Integral $I(\lambda, \alpha, x_0)$	405
27.2. The Mapping's Mean	407
27.3. The General Lemma of Convexity	409
27.4. The Pointwise Estimates for Solutions of the Dirichlet Problem (27.1–2)	413
§28. <i>Comments to Chapter 8. The Maximum Principles in Global Problems of Differential Geometry</i>	441
28.1. Comments to Chapter 8	441
28.2. Estimates for Solutions of Quasilinear Elliptic Equations Connected with Problems of Global Geometry	442

§29. <i>The Dirichlet Problem for Quasilinear Elliptic Equations</i>	446
29.1. Introduction.....	446
29.2. Estimates for the Gradient on the Boundary of ∂B . (The Method of Global Barriers)	450
29.3. Estimates of the Gradient of Solutions on the Boundary. (The Method of Convex Majorants).....	465
29.4. Estimates of the Gradient of Solutions on the Boundary. (The Method of Support Hyperplanes)	473
29.5. Global Gradient Estimates for Solutions of Quasilinear Elliptic Equations.....	488
Bibliography	497
