Contents

Part I The Basic Equations

1. Coordinates, Mass Distribution, and Gravitational Field in Spherical Stars	2
1.1 Eulerian Description	2
1.2 Lagrangian Description	3
1.3 The Gravitational Field	4
2. Conservation of Momentum	6
2.1 Hydrostatic Equilibrium	6
2.2 The Role of Density and Simple Solutions	7
2.3 Simple Estimates of Central Values P_c , T_c	8
2.4 The Equation of Motion for Spherical Symmetry	9
2.5 The Non-spherical Case	11
2.6 Hydrostatic Equilibrium in General Relativity	12
2.7 The Piston Model	13
3. The Virial Theorem	15
3.1 Stars in Hydrostatic Equilibrium	15
3.2 The Virial Theorem of the Piston Model	17
3.3 The Kelvin–Helmholtz Time-scale	18
3.4. The Virial Theorem for Non-vanishing Surface Pressure	18
4. Conservation of Energy	19
4.1 Thermodynamic Relations	19
4.2 Energy Conservation in Stars	21
4.3 Global and Local Energy Conservation	23
4.4 Time-scales	25
5. Transport of Energy by Radiation and Conduction	27
5.1 Radiative Transport of Energy	27
5.1.1 Basic Estimates	27
5.1.2 Diffusion of Radiative Energy	28
5.1.3 The Rosseland Mean for κ_ν	29
5.2 Conductive Transport of Energy	31
5.3 The Thermal Adjustment Time of a Star	33
5.4 Thermal Properties of the Piston Model	34

6. Stability Against Local, Non-spherical Perturbations	36
6.1 Dynamical Instability	36
6.2 Oscillation of a Displaced Element	41
6.3 Vibrational Stability	42
6.4 The Thermal Adjustment Time	43
6.5 Secular Instability	44
6.6 The Stability of the Piston Model	45
7. Transport of Energy by Convection	48
7.1 The Basic Picture	49
7.2 Dimensionless Equations	51
7.3 Limiting Cases, Solutions, Discussion	52
8. The Chemical Composition	56
8.1 Relative Mass Abundances	56
8.2 Variation of Composition with Time	57
8.2.1 Radiative Regions	57
8.2.2 Diffusion	58
8.2.3 Convective Regions	61
Part II The Overall Problem	
9. The Differential Equations of Stellar Evolution	64
9.1 The Full Set of Equations	64
9.2 Time-scales and Simplifications	66
10. Boundary Conditions	68
10.1 Central Conditions	68
10.2 Surface Conditions	69
10.3 Influence of the Surface Conditions and Properties of Envelope Solutions	72
10.3.1 Radiative Envelopes	72
10.3.2 Convective Envelopes	75
10.3.3 Summary	75
10.3.4 The T - r Stratification	76
11. Numerical Procedure	77
11.1 The Shooting Method	77
11.2 The Henyey Method	78
11.3 Treatment of the First- and Second-Order Time Derivatives	83
12. Existence and Uniqueness of Solutions	85
12.1 Notation and Outline of the Procedure	86
12.2 Models in Complete Equilibrium	87
12.2.1 Fitting Conditions in the $P_c - T_c$ Plane	87

12.2.2	Local Uniqueness	88
12.2.3	Variation of Parameters	89
12.3	Hydrostatic Models without Thermal Equilibrium	91
12.3.1	Degrees of Freedom and Fitting Conditions	91
12.3.2	Local Uniqueness	93
12.3.3	Variation of Parameters	93
12.4	Connection with Stability Problems	95
12.5	Non-local Properties of Equilibrium Models	97

Part III Properties of Stellar Matter

13.	The Ideal Gas with Radiation	102
13.1	Mean Molecular Weight and Radiation Pressure	102
13.2	Thermodynamic Quantities	104
14.	Ionization	107
14.1	The Boltzmann and Saha Formulae	107
14.2	Ionization of Hydrogen	110
14.3	Thermodynamical Quantities for a Pure Hydrogen Gas	111
14.4	Hydrogen–Helium Mixtures	112
14.5	The General Case	114
14.6	Limitation of the Saha Formula	115
15.	The Degenerate Electron Gas	118
15.1	Consequences of the Pauli Principle	118
15.2	The Completely Degenerate Electron Gas	119
15.3	Limiting Cases	122
15.4	Partial Degeneracy of the Electron Gas	123
16.	The Equation of State of Stellar Matter	129
16.1	The Ion Gas	129
16.2	The Equation of State	130
16.3	Thermodynamic Quantities	132
16.4	Crystallization	134
16.5	Neutronization	135
17.	Opacity	137
17.1	Electron Scattering	137
17.2	Absorption Due to Free–Free Transitions	138
17.3	Bound–Free Transitions	139
17.4	Bound–Bound Transitions	140
17.5	The Negative Hydrogen Ion	141
17.6	Conduction	142
17.7	Opacity Tables	143

18. Nuclear Energy Production	146
18.1 Basic Considerations	146
18.2 Nuclear Cross-sections	150
18.3 Thermonuclear Reaction Rates	152
18.4 Electron Shielding	157
18.5 The Major Nuclear Burnings	161
18.5.1 Hydrogen Burning	162
18.5.2 Helium Burning	165
18.5.3 Carbon Burning etc.	167
18.6 Neutrinos	169

Part IV Simple Stellar Models

19. Polytropic Gaseous Spheres	174
19.1 Polytropic Relations	174
19.2 Polytropic Stellar Models	175
19.3 Properties of the Solutions	177
19.4 Application to Stars	178
19.5 Radiation Pressure and the Polytrope $n = 3$	180
19.6 Polytropic Stellar Models with Fixed K	180
19.7 Chandrasekhar's Limiting Mass	181
19.8 Isothermal Spheres of an Ideal Gas	183
19.9 Gravitational and Total Energy for Polytropes	184
19.10 Supermassive Stars	186
19.11 A Collapsing Polytrope	187
20. Homology Relations	191
20.1 Definitions and Basic Relations	191
20.2 Applications to Simple Material Functions	194
20.2.1 The Case $\delta = 0$	194
20.2.2 The Case $\alpha = \delta = \varphi = 1, a = b = 0$	194
20.2.3 The Role of the Equation of State	197
20.3 Homologous Contraction	198
21. Simple Models in the U-V Plane	200
21.1 The U - V Plane	200
21.2 Radiative Envelope Solutions	203
21.3 Fitting of a Convective Core	205
21.4 Fitting of an Isothermal Core	206
22. The Main Sequence	207
22.1 Surface Values	207
22.2 Interior Solutions	210
22.3 Convective Regions	212
22.4 Extreme Values of M	215

23. Other Main Sequences	216
23.1 The Helium Main Sequence	216
23.2 The Carbon Main Sequence	218
23.3 Main Sequences as Linear Series of Stellar Models	219
23.4 Generalized Main Sequences	221
24. The Hayashi Line	224
24.1 Luminosity of Fully Convective Models	224
24.2 A Simple Description of the Hayashi Line	226
24.3 The Neighbourhood of the Hayashi Line and the Forbidden Region	229
24.4 Numerical Results	231
24.5 Limitations for Fully Convective Models	232
25. Stability Considerations	234
25.1 General Remarks	234
25.2 Stability of the Piston Model	235
25.2.1 Dynamical Stability	236
25.2.2 Inclusion of Non-adiabatic Effects	236
25.3 Stellar Stability	238
25.3.1 Perturbation Equations	239
25.3.2 Dynamical Stability	240
25.3.3 Non-adiabatic Effects	241
25.3.4 The Gravothermal Specific Heat	242
25.3.5 Secular Stability Behaviour of Nuclear Burning	243
Part V Early Stellar Evolution	
26. The Onset of Star Formation	248
26.1 The Jeans Criterion	248
26.1.1 An Infinite Homogeneous Medium	248
26.1.2 A Plane Parallel Layer in Hydrostatic Equilibrium	250
26.2 Instability in the Spherical Case	252
26.3 Fragmentation	253
27. The Formation of Protostars	256
27.1 Free-Fall Collapse of a Homogeneous Sphere	256
27.2 Collapse onto a Condensed Object	258
27.3 A Collapse Calculation	259
27.4 The Optically Thin Phase and the Formation of a Hydrostatic Core	260
27.5 Core Collapse	262
27.6 Evolution in the Hertzsprung–Russell Diagram	264
28. Pre-Main-Sequence Contraction	266
28.1 Homologous Contraction of a Gaseous Sphere	266
28.2 Approach to the Zero-Age Main Sequence	269

29. From the Initial to the Present Sun	271
29.1 Choosing the Initial Model	271
29.2 Solar Neutrinos	275
30. Chemical Evolution on the Main Sequence	277
30.1 Change in the Hydrogen Content	277
30.2 Evolution in the Hertzsprung–Russell Diagram	278
30.3 Time-scales for Central Hydrogen Burning	280
30.4 Complications Connected with Convection	280
30.4.1 Convective Overshooting	281
30.4.2 Semiconvection	284
30.5 The Schönberg–Chandrasekhar Limit	285
30.5.1 A Simple Approach – The Virial Theorem and Homology	286
30.5.2 Integrations for Core and Envelope	288
30.5.3 Complete Solutions for Stars with Isothermal Cores	289

Part VI Post-Main-Sequence Evolution

31. Evolution Through Helium Burning – Massive Stars	292
31.1 Crossing the Hertzsprung Gap	292
31.2 Central Helium Burning	296
31.3 The Cepheid Phase	300
31.4 To Loop or Not to Loop ...	301
31.5 After Central Helium Burning	306
32. Evolution Through Helium Burning – Low-Mass Stars	308
32.1 Post-Main-Sequence Evolution	308
32.2 Shell-Source Homology	309
32.3 Evolution to the Helium Flash	313
32.4 The Helium Flash	316
32.5 Numerical Results for the Helium Flash	317
32.6 Evolution after the Helium Flash	320
32.7 Evolution from the Zero-Age Horizontal Branch	321
32.8 Equilibrium Models with Helium Cores – Continued	324
33. Later Phases	328
33.1 Nuclear Cycles	328
33.2 Shell Sources and Their Stability	330
33.3 Thermal Pulses of a Shell Source	333
33.4 Evolution of the Central Region	336
33.5 The Core-Mass–Luminosity Relation for Large Core Masses	342
34. Final Explosions and Collapse	344
34.1 The Evolution of the C–O Core	344
34.2 Carbon Burning in Degenerate Cores	348

34.2.1	The Carbon Flash	348
34.2.2	Nuclear Statistical Equilibrium	349
34.2.3	Hydrostatic and Convective Adjustment	351
34.2.4	Combustion Fronts	352
34.2.5	Numerical Solutions	354
34.2.6	Carbon Burning in Accreting White Dwarfs	356
34.3	Collapse of Cores of Massive Stars	356
34.3.1	Simple Collapse Solutions	357
34.3.2	The Reflection of the Infall	359
34.3.3	Effects of Neutrinos	360
34.3.4	Numerical Results	362
34.3.5	Pair-Creation Instability	362

Part VII Compact Objects

35.	White Dwarfs	366
35.1	Chandrasekhar's Theory	366
35.2	The Corrected Mechanical Structure	370
35.3	Thermal Properties and Evolution of White Dwarfs	374
36.	Neutron Stars	380
36.1	Cold Matter Beyond Neutron Drip	380
36.2	Models of Neutron Stars	383
37.	Black Holes	390

Part VIII Pulsating Stars

38.	Adiabatic Spherical Pulsations	398
38.1	The Eigenvalue Problem	398
38.2	The Homogeneous Sphere	402
38.3	Pulsating Polytropes	403
39.	Non-adiabatic Spherical Pulsations	407
39.1	Vibrational Instability of the Piston Model	407
39.2	The Quasi-adiabatic Approximation	408
39.3	The Energy Integral	409
39.3.1	The κ Mechanism	411
39.3.2	The ε Mechanism	412
39.4	Stars Driven by the κ Mechanism – The Instability Strip	412
39.5	Stars Driven by the ε Mechanism	417
40.	Non-radial Stellar Oscillations	418
40.1	Perturbations of the Equilibrium Model	418

40.2	Normal Modes and Dimensionless Variables	420
40.3	The Eigenspectra	422
40.4	Stars Showing Non-radial Oscillations	425

Part IX Stellar Rotation

41. The Mechanics of Rotating Stellar Models	428
41.1 Uniformly Rotating Liquid Bodies	428
41.2 The Roche Model	431
41.3 Slowly Rotating Polytropes	433
42. The Thermodynamics of Rotating Stellar Models	435
42.1 Conservative Rotation	435
42.2 Von Zeipel's Theorem	436
42.3 Meridional Circulation	437
42.4 The Non-conservative Case	438
42.5 The Eddington-Sweet Time-scale	439
42.6 Meridional Circulation in Inhomogeneous Stars	442
43. The Angular-Velocity Distribution in Stars	444
43.1 Viscosity	444
43.2 Dynamical Stability	446
43.3 Secular Stability	451
References	455
Subject Index	461
