Alexander Lubotzky

Discrete Groups, Expanding Graphs and Invariant Measures

Appendix by Jonathan D. Rogawski

Birkhäuser Verlag
Basel · Boston · Berlin

Table of Contents

0 Introduction ix

1 Expanding graphs

1.0 Introduction 1
1.1 Expanders and their applications 1
1.2 Existence of expanders 5

2 The Banach-Ruziewicz problem

2.0 Introduction 7
2.1 The Hausdorff-Banach-Tarski paradox 7
2.2 Invariant measures 13
2.3 Notes 18

3 Kazhdan Property (T) and its applications

3.0 Introduction 19
3.1 Kazhdan property (T) for semi-simple groups 19
3.2 Lattices and arithmetic subgroups 27
3.3 Explicit construction of expanders using property (T) 30
3.4 Solution of the Ruziewicz problem for $S^n, n \geq 4$ using property (T) 34
3.5 Notes 39

4 The Laplacian and its eigenvalues

4.0 Introduction 41
4.1 The geometric Laplacian 41
4.2 The combinatorial Laplacian 44
4.3 Eigenvalues, isoperimetric inequalities and representations ... 49
4.4 Selberg Theorem $\lambda_1 \geq \frac{3}{16}$ and expanders 52
4.5 Random walk on k-regular graphs; Ramanujan graphs 55
4.6 Notes 59

5 The representation theory of PGL_2

5.0 Introduction 61
5.1 Representations and spherical functions 62
5.2 Irreducible representations of $PSL_2(\mathbb{R})$ and eigenvalues of the Laplacian 65
5.3 The tree associated with $PGL_2(\mathbb{Q}_p)$ 68
5.4 Irreducible representations of $PGL_2(\mathbb{Q}_p)$ and eigenvalues of the Hecke operator 70
5.5 Spectral decomposition of $\Gamma\backslash G$ 72

6 Spectral decomposition of $L^2(G(\mathbb{Q})\backslash G(\mathbb{A}))$

6.0 Introduction 77
6.1 Deligne's Theorem; adèlic formulation 77
6.2 Quaternion algebras and groups 79
6.3 The Strong Approximation Theorem and its applications 81
6.4 Notes 83

7 Banach-Ruziewicz problem for $n = 2, 3$; Ramanujan graphs

7.0 Introduction 85
7.1 The spectral decomposition of $G'(\mathbb{Z}[\frac{1}{p}])\backslash G'(\mathbb{R}) \times G'(\mathbb{Q}_p)$ 86
7.2 The Banach-Ruziewicz problem for $n = 2, 3$ 86
7.3 Ramanujan graphs and their extremal properties 88
7.4 Explicit constructions 94
7.5 Notes 99

8 Some more discrete mathematics

8.0 Introduction 101
8.1 The diameter of finite simple groups 101
8.2 Characters and eigenvalues of finite groups 106
8.3 Some more Ramanujan graphs (of unbounded degrees) 112
8.4 Ramanujan diagrams 115

9 Distributing points on the sphere

9.0 Introduction 119
9.1 Hecke operators of group action 119
9.2 Distributing points on S^2 (and S^3) 121

10 Open problems

10.1 Expanding Graphs 125
10.2 The Banach-Ruziewicz Problem 125
10.3 Kazhdan Property (T) and its applications 126
10.4 The Laplacian and its eigenvalues 128
10.5 The representation theory of PGL_2 129
10.6 Spectral decomposition of $L^2(G(\mathbb{Q})/G(\mathbb{A}))$ 129
10.7 Banach-Ruziewitz Problem for $n = 2, 3$; Ramanujan Graphs .. 130
10.8 Some more discrete mathematics 131
10.9 Distributing points on the sphere 133

Appendix: by *Jonathan D. Rogawski*
Modular forms, the Ramanujan conjecture and the Jacquet-Langlands correspondence

A.0 Preliminaries 136
A.1 Representation theory and modular forms 139
A.2 Classification of irreducible representations 149
A.3 Quaternion algebras 159
A.4 The Selberg trace formula 164
