Nomenclature

1	Introduction	1
1.1	Motivation	1
1.2	Issue	2
1.3	Aim of scientific research	2
1.4	Structure	3
2	Fundamentals	5
2.1	Techniques for measuring piston characteristics	5
2.2	Digital telemetry systems	15
2.2.1	Industrial solutions	18
2.3	Comparison of piston analysis techniques	22
2.4	Sensors described in literature	23
2.5	Power supply techniques	23
3	Product development	27
3.1	Identification of system features	27
3.2	Telemetry system components	28
3.3	Telemetry system	32
3.3.1	Build-up	32
3.3.2	Measuring channels and modes	34
3.3.3	Power consumption	37
3.3.4	Precision	41
3.3.5	Measurement frequency	44
3.4	Power supply	47
3.5	Adapter board	48
3.6	Data acquisition	48

4	Test setup	49
4.1	Test bench	49
4.1.1	Engine	49
4.1.2	Piston	51
4.2	Thermocouple piston (PistonTC)	52
4.2.1	Energy storage and thermocouple installation	52
4.2.2	Thermocouple positions	55
4.3	Surface thermocouple piston (PistonSTC)	56
4.3.1	Surface thermocouple	56
4.3.2	Thermocouple positions	58
4.4	0.15 mm-thermocouple piston (Piston015TC)	59
4.4.1	0.15 mm-thermocouple	59
4.4.2	Thermocouple positions	61
4.5	Weights of the telemetry pistons	62
5	Results of telemetry measurements	63
5.1	Cylinder head temperatures	63
5.1.1	Cylinder head thermocouples	66
5.1.2	Comparison of surface thermocouples	70
5.2	Piston acceleration	72
5.3	Piston temperatures	81
5.3.1	Thermal analysis	84
5.3.2	Cyclic data	92
5.4	Experiments with alternative fuel	94
6	Summary	97
6.1	Conclusion	97
6.2	Outlook	100
	Bibliography	103
A	Appendix	113
A.1	Positions of head thermocouples	113
A.2	Positions of liner thermocouples	114
A.3	Battery holder	114
A.4	Dewe-800	115
A.5	Diesel (B7 EN 590) fuel analysis	116
A.6	HVO (DIN EN 15940) fuel analysis	117
