

1	Introduction to Euclidean Geometry	1
1.1	Isometries	1
1.2	Figures and Permutations	4
1.3	The Structure of Isometries	7
1.4	Higher-Dimensional Spaces	10
2	Introduction to Groups	13
2.1	The Definition of a Group and the Dihedral Groups	13
2.2	The Order of a Group and Abelian Groups	17
2.3	Cyclic Groups	21
2.4	Properties of Groups	24
2.5	The Order of an Element	26
3	Subgroups and Homomorphisms	31
3.1	Subgroups	31
3.2	Cosets and Lagrange's Theorem	37
3.3	Homomorphisms	41
3.4	Normal Subgroups	47
3.5	Translations	54
4	Group Operations	59
4.1	The Symmetric Group	59
4.2	Operations of Groups on Sets	64
4.3	Conjugation	70
4.4	The Orbit-Stabilizer Theorem and the Class Equation	75
4.5	Cayley Graphs	81
4.6	A Decomposition of the Plane	88
5	Group Presentations	95
5.1	Group Presentations	95
5.2	Free Groups	100
5.3	Tietze Transformations and Decidability	107

6	Products of Groups	113
6.1	The Direct Product	113
6.2	The Free Product	118
6.3	The Semidirect Product	120
6.4	Discontinuous Groups and Translations	125
7	Finite Groups	127
7.1	An Example	127
7.2	The Sylow Theorems	128
7.3	Some Groups of Small Order	133
7.4	The Orthogonal Group	137
7.5	Regular Decompositions of the 2-Sphere	139
7.6	Counting Orbits	145
8	Abelian and Solvable Groups	149
8.1	Commutators	149
8.2	Abelian Groups	152
8.3	Solvable Groups	155
9	The Hyperbolic Plane	163
9.1	Axiomatic Geometry	163
9.2	Isometries in the Hyperbolic Plane	166
9.3	Decompositions of the Hyperbolic Plane	171
10	Hyperbolic Groups	177
10.1	Van Kampen Diagrams	177
10.2	Quasi-Isometries and the Švarc–Milnor Theorem	181
10.3	Isoperimetric Inequalities	183
10.4	Hyperbolic Groups	188
10.5	Combings	194
A	The Isometries of the Plane	197
B	Matrices	199
C	List of Symbols	203
D	Important Groups	207
E	Used GAP Commands	209
F	Hints for the Exercises	211
G	Notes on the Literature	227
	References	229
	Index	233
