

Outline of contents

1	Introduction	1
2	Physical basics	3
2.1	Coordinates, systems of units and notation	3
2.2	Mechanics	4
2.3	Fluid dynamics	24
2.4	The physical environment of ballistics	48
3	Interior ballistics	51
3.1	Introduction. History.	51
3.2	Explosive materials	52
3.3	Elements of interior ballistics	64
3.4	Interior ballistics calculations	79
3.5	Obtaining the required propellant data	100
3.6	The interior ballistics of rockets	103
3.7	Special propulsion systems	111
3.8	The acceleration of fragments	119
4	Intermediate ballistics	125
4.1	Introduction	125
4.2	Muzzle phenomena	126
4.3	Barrel exit	135
5	Exterior ballistics	145
5.1	History	145
5.2	The atmosphere	148
5.3	Forces and moments acting on a projectile	154
5.4	Trajectory calculations using the point-mass model	167
5.5	Trajectory calculations with more than three degrees of freedom	219
5.6	Stability and tractability	233
5.7	Determining force and moment coefficients	249

5.8	Ballistically optimal projectiles	268
5.9	Elementary exterior ballistics of unguided rockets	287
6	An outline of terminal ballistics	293
6.1	Introduction	293
6.2	Perforation models	297
6.3	The behaviour of various materials	307
6.4	Protective systems	316
6.5	Problems related to ballistic protection	320
7	Ricochets	339
7.1	Introduction	339
7.2	Collision theory	340
7.3	The phenomenology of ricochets	349
7.4	The projectile as a point mass	354
7.5	The projectile as a rigid body	363
7.6	The trajectory of a ricochet.....	372
7.7	Further ricochet theories.....	374
8	Special applications of ballistics.....	377
8.1	Introduction	377
8.2	Forensic applications (<i>Co-author: Dr Fabiano RIVA</i>)	378
8.3	Safety on shooting ranges.....	395

Table of content

Table of symbols	XXIII
Conversion factors	XXXI
1 Introduction	1
2 Physical basics	3
2.1 Coordinates, systems of units and notation	3
2.2 Mechanics.....	4
2.2.1 Kinematics and linear motions.....	4
2.2.2 Mass, momentum and force	6
2.2.3 Work and energy	8
2.2.4 Rotational movements.....	10
2.2.5 Laws of conservation	11
2.2.6 Equations of motion	12
2.2.6.1 General.....	12
2.2.6.2 D’ALEMBERT’s principle.....	12
2.2.6.3 Trajectory in a vacuum	13
2.2.6.4 Velocity as a function of distance	14
2.2.6.5 Movement of a body in a central force field.....	15
2.2.7 Acceleration in a rotating frame of reference	19
2.2.7.1 Centrifugal acceleration	19
2.2.7.2 Coriolis acceleration	19
2.2.8 Movement of rigid objects	20
2.2.8.1 Analysis of movements.....	20
2.2.8.2 Tensor of inertia.....	20
2.2.8.3 The free symmetric gyroscope.....	22
2.2.8.4 The heavy symmetric gyroscope	22
2.3 Fluid dynamics	24
2.3.1 General	24
2.3.2 Basic concepts in thermodynamic.....	24
2.3.2.1 Temperature	24
2.3.2.2 Temperature and heat.....	25
2.3.2.3 States of matter	25
2.3.2.4 Equation of state for gases	26

2.3.2.5	Heat, work and internal energy	26
2.3.3	Characteristics of materials	28
2.3.3.1	Density and compressibility	28
2.3.3.2	Viscosity	28
2.3.3.3	Speed of sound	29
2.3.3.4	Propagation of sound waves. Mach cones.	30
2.3.4	Frictionless flow	31
2.3.4.1	Definition. Laws of conservation	31
2.3.4.2	BERNOULLI's equation	33
2.3.4.3	Flow resistance	33
2.3.4.4	Rotational flow	35
2.3.4.5	The Magnus effect	36
2.3.4.6	The aerofoil principle	37
2.3.5	Flow with friction	38
2.3.5.1	Forces and equations of motion	38
2.3.5.2	Taking account of viscosity. Reynolds number	39
2.3.6	Flow processes and free jets	40
2.3.6.1	General	40
2.3.6.2	Exhaust flow from a convergent nozzle	40
2.3.6.3	Jet velocity and energy	42
2.3.6.4	Shock waves	43
2.3.6.5	De Laval nozzles	44
2.4	The physical environment of ballistics	48
2.4.1	Orders of magnitude	48
2.4.2	Calibre and sectional density	49
3	Interior ballistics	51
3.1	Introduction. History.	51
3.2	Explosive materials	52
3.2.1	General	52
3.2.1.1	Definitions and nomenclature	52
3.2.1.2	Burning rate	52
3.2.2	Black powder	53
3.2.2.1	History	53
3.2.2.2	Components	54
3.2.2.3	Manufacturing process	55
3.2.2.4	Composition and products of combustion	56
3.2.3	Nitrocellulose propellants	56
3.2.3.1	Nitrocellulose	56
3.2.3.2	Single-base powders	58
3.2.3.3	Double-base and multiple-base powders	58
3.2.4	Propellants not-based on nitrocellulose	60

3.2.4.1	Polymer-bonded propellants	60
3.2.4.2	Composite propellants	60
3.2.5	Physical characteristics of propellants	61
3.2.6	Igniters and detonating agents.....	62
3.3	Elements of interior ballistics.....	64
3.3.1	Means of accelerating a projectile.....	64
3.3.1.1	General.....	64
3.3.1.2	Spring energy.....	64
3.3.1.3	Compressed gases	66
3.3.1.4	Explosive materials.....	67
3.3.2	Combustion of propellant.....	67
3.3.2.1	Burning rate	67
3.3.2.2	Form function	69
3.3.2.3	Influencing burning rate by chemical means.....	71
3.3.2.4	The burning law	72
3.3.3	The energy equation.....	72
3.3.4	Motion of the projectile in the barrel	74
3.3.5	Pressure as a function of time and displacement	74
3.3.6	Efficiency and maximum velocity	77
3.4	Interior ballistics calculations	79
3.4.1	The thermodynamic equations	79
3.4.2	The expansion ratio.....	81
3.4.3	Twist and rifling groove forces.....	82
3.4.4	Pressure gradient in the barrel.....	84
3.4.5	The gas dynamics model.....	85
3.4.5.1	History	85
3.4.5.2	Current situation	90
3.4.6	HEYDENREICH's method.....	92
3.4.7	The open gun tube.....	96
3.4.7.1	General.....	96
3.4.7.2	The extended system of equations	96
3.4.7.3	Gas pressure in an open gun tube	98
3.5	Obtaining the required propellant data.....	100
3.5.1	General	100
3.5.2	The manometric bomb	100
3.5.3	The Crawford bomb	102
3.5.4	Thermodynamic calculations	103
3.6	The interior ballistics of rockets.....	103
3.6.1	General	103
3.6.2	Propellant combustion and combustion chamber pressure	104
3.6.2.1	Propellant combustion	104

3.6.2.2	Pressure in the combustion chamber	105
3.6.2.3	Propellant geometry	107
3.6.3	Thrust	108
3.6.3.1	The rocket equation	108
3.6.3.2	Calculation thrust. Nozzle design.	109
3.6.3.3	Determining thrust	111
3.7	Special propulsion systems.....	111
3.7.1	General	111
3.7.2	The Davis gun	112
3.7.3	Recoilless guns.....	113
3.7.4	The high-low-pressure system	114
3.7.5	The light-gas gun.....	115
3.7.6	The principle of sub-calibre projectiles.....	116
3.7.6.1	Basics	116
3.7.6.2	Tapered-bore guns	117
3.7.6.3	Sabot rounds	118
3.8	The acceleration of fragments	119
3.8.1	General	119
3.8.2	Fragments accelerated by explosives.....	119
3.8.2.1	The Gurney formula.....	119
3.8.2.2	Local application of the Gurney formula.....	121
3.8.3	Fragments accelerated by momentum.....	123
3.8.3.1	Origins. Possible velocities.....	123
3.8.3.2	Case study	124
4	Intermediate ballistics.....	125
4.1	Introduction	125
4.2	Muzzle phenomena.....	126
4.2.1	Gas flow	126
4.2.1.1	Gas flow as the projectile leaves the barrel	126
4.2.1.2	Outflowing gas velocity.....	128
4.2.1.3	Gas flow from an open barrel	130
4.2.2	Flash	133
4.3	Barrel exit	135
4.3.1	Barrel oscillation and angle of jump	135
4.3.1.1	Origin and effects.....	135
4.3.2.2	Determining angle of jump	136
4.3.2	Recoil	138
4.3.2.1	Causes of recoil.....	138
4.3.2.2	Determining recoil momentum	138
4.3.2.3	Recoil velocity and energy	140

4.3.2.4 Torque during firing.....	141
4.3.2.5 Means of influencing recoil	142
4.3.3 The sabot-discarding process	143
5 Exterior ballistics	145
5.1 History	145
5.2 The atmosphere	148
5.2.1 Physical characteristics	148
5.2.2 Standard atmospheres.....	150
5.2.2.1 General.....	150
5.2.2.2 The ICAO standard atmosphere.....	151
5.2.2.3 Other standard atmospheres.....	152
5.2.3 True conditions.....	153
5.2.3.1 Pressure and temperature	153
5.2.3.2 Wind.....	154
5.3 Forces and moments acting on a projectile	154
5.3.1 Earth-related acceleration.....	154
5.3.1.1 Centrifugal acceleration.....	154
5.3.1.2 Acceleration due to gravity.....	155
5.3.1.3 Coriolis acceleration	157
5.3.2 The projectile as a mass point	160
5.3.2.1 Drag	160
5.3.2.2 Weight.....	161
5.3.3 The projectile as a rigid body.....	163
5.3.3.1 The motion of a projectile.....	163
5.3.3.2 Forces and moments resulting from non-axial flow	164
5.3.3.3 Forces and moments resulting from rotation about a transverse axis	165
5.3.3.4 Forces and moments resulting from rotation about the longitudinal axis.....	166
5.3.3.5 The cause of lateral deviation	167
5.3.4 Forces and moments acting on the projectile.....	167
5.4 Trajectory calculations using the point-mass model	167
5.4.1 Equations of motion	167
5.4.1.1 Physical derivation.....	167
5.4.1.2 Trajectory geometry derivation.....	168
5.4.1.3 The principal equation of exterior ballistics	170
5.4.2 Historical remarks on trajectory calculations.....	171
5.4.2.1 Representing the air drag	171
5.4.2.2 SIACCI's method.....	171
5.4.2.3 Drag laws and standard projectiles	172
5.4.2.4 The Ingalls tables and the ballistic coefficient (BC).....	175

5.4.2.5	Lateral deviation (derivation)	178
5.4.3	Equation systems for programming	178
5.4.3.1	Numeric calculations	178
5.4.3.2	Systems of equations with two and three degrees of freedom	179
5.4.3.3	The initial value problem	181
5.4.3.4	Some tips on integration	183
5.4.4	The influence of wind	184
5.4.4.1	Equations of motion taking account of wind	184
5.4.4.2	Transformation into a wind-axis system	185
5.4.4.3	DIDION's longitudinal wind equation	187
5.4.4.4	DIDION's crosswind equation	188
5.4.4.5	Measuring sensitivity to crosswind	190
5.4.5	Trajectory characteristics	191
5.4.5.1	General	191
5.4.5.2	Characteristics of trajectory velocity	191
5.4.5.3	Geometric characteristics of the trajectory	195
5.4.5.4	Specific points along the trajectory	198
5.4.6	Approximations	199
5.4.6.1	Approximations for flat trajectories	199
5.4.6.2	Approximations for apex height	201
5.4.6.3	Approximations for point of impact	202
5.4.6.4	Firing uphill and downhill	203
5.4.6.5	Shots fired steeply into the air	203
5.4.7	The boundary value problem	205
5.4.7.1	Outline of the problem	205
5.4.7.2	Firing and range tables, trajectory maps and the Benoist Plan	206
5.4.7.3	Mechanical solutions	210
5.4.7.4	Calculated solutions	211
5.4.7.5	Further comments regarding the boundary value problem	213
5.4.8	The exterior ballistics of fragments	214
5.4.8.1	Sectional density	214
5.4.8.2	Drag coefficient	215
5.4.8.3	Trajectory calculations	216
5.4.8.4	Maximum distances	217
5.5	Trajectory calculations with more than three degrees of freedom	219
5.5.1	Trajectory calculations with six degrees of freedom	219
5.5.1.1	Reference systems	219
5.5.1.2	Forces and moments	220
5.5.1.3	The equations of motion	224

5.5.1.4	Further points	225
5.5.1.5	The equation of the complex angle of attack	228
5.5.2	The modified point-mass models	229
5.5.2.1	Introduction	229
5.5.2.2	The decrease in angular velocity	230
5.5.2.3	The BRL approach	231
5.5.2.4	The FLECK and MOLITZ approach	232
5.6	Stability and tractability	233
5.6.1	What is stability?	233
5.6.2	Principles of stability as they relate to a projectile	234
5.6.2.1	Spin-stabilized projectiles	234
5.6.2.2	Stabilizing non-spinning projectiles	234
5.6.2.3	Shoulder stabilization	235
5.6.3	Gyroscopic stability	235
5.6.4	The Molitz stability criterion	238
5.6.4.1	Introduction	238
5.6.4.2	Mathematical definition of stability	238
5.6.4.3	Stability criteria	239
5.6.4.4	Ballistic stability	240
5.6.4.5	The Molitz stability triangle	242
5.6.4.6	Stability problems. Unstable projectiles.	243
5.6.5	Tractability	246
5.6.5.1	Definition of tractability	246
5.6.5.2	When are tractability problems likely to arise?	247
5.7	Determining force and moment coefficients	249
5.7.1	Preliminary remarks	249
5.7.2	Experimental and empirical methods	249
5.7.2.1	Drag coefficient	249
5.7.2.2	Further coefficients	252
5.7.3	Calculating the drag coefficient	253
5.7.3.1	The components of the drag coefficient	253
5.7.3.2	Wave drag. Method of axial singularities.	254
5.7.3.3	Wave drag. Newtonian theory.	259
5.7.3.4	The drag coefficient of the nose flat	260
5.7.3.5	Coefficient of friction	260
5.7.3.6	Negative pressure effects at the base	263
5.7.3.7	Examples	265
5.7.3.8	Subsonic flow	266
5.7.4	Calculating other coefficients	267
5.7.4.1	Lift force and overturning moment coefficients	267
5.7.4.2	Other coefficients	268
5.8	Ballistically optimal projectiles	268

5.8.1	Aerodynamically optimal projectiles	268
5.8.1.1	HAACK's projectile theory	268
5.8.1.2	Applying Newtonian theory.....	271
5.8.1.3	Scope of application of the optimizations.....	272
5.8.1.4	Optimizing the tail of the projectile	273
5.8.2	Practical design of an optimum projectile.....	275
5.8.2.1	Nose shape	275
5.8.2.2	Comments regarding the cylindrical section and the tail.....	276
5.8.2.3	Stability and tractability	276
5.8.3	Examples of optimized projectiles	277
5.8.3.1	Verifying designs experimentally; general comments.....	277
5.8.3.2	Studies using model projectiles	277
5.8.3.3	Artillery shells.....	279
5.8.3.4	Small-calibre projectiles	279
5.8.4	Optimizing stability.....	280
5.8.4.1	Optimum projectiles and gyroscopic stability	280
5.8.4.2	Projectiles with maximum stability	282
5.8.4.3	What is the maximum length of a spin-stabilized projectile?.....	283
5.8.5	Reducing base drag	285
5.8.5.1	The "base bleed" principle.....	285
5.8.5.2	Tracer projectiles	286
5.9	Elementary exterior ballistics of unguided rockets	287
5.9.1	Preliminary remarks	287
5.9.2	Rocket trajectories.....	287
5.9.2.1	General.....	287
5.9.2.2	The boost phase	287
5.9.2.3	The midcourse phase	289
5.9.2.4	General trajectory characteristics.....	289
5.9.3	The behaviour of rockets subjected to crosswind	290
6	An outline of terminal ballistics	293
6.1	Introduction	293
6.1.1	Preliminary remarks	293
6.1.2	Basic laws.....	293
6.1.3	Types of material.....	294
6.1.4	Terms and definitions.....	295
6.1.5	The Backman-Goldsmith diagram	296
6.2	Perforation models.....	297
6.2.1	The plugging model	297
6.2.2	The displacement model	297
6.2.3	Perforation of thin sheets of material.....	298

6.2.4	The erosion model (<i>Author: Dipl.-Ing. ETH W. ODERMATT</i>).....	299
6.2.4.1	Description of the model.....	299
6.2.4.2	Hydrodynamic approach.....	301
6.2.4.3	Reference targets.....	302
6.2.4.4	Most significant parameters, dimensional analysis	303
6.2.4.5	Complete approximation formula for the perforation threshold.....	306
6.3	The behaviour of various materials	307
6.3.1	Basic considerations.....	307
6.3.2	Steel.....	308
6.3.3	Aluminium	310
6.3.4	Concrete and masonry.....	311
6.3.5	Wood	313
6.3.6	Sand and soil	315
6.4	Protective systems	316
6.4.1	Inclined plates	316
6.4.2	Spaced plates	318
6.4.3	Asymmetric arrangements	319
6.5	Problems related to ballistic protection	320
6.5.1	General	320
6.5.1.1	Personal protection and protection of material assets.....	320
6.5.1.2	The threat potential	320
6.5.1.3	Threat potential parameters	321
6.5.2	Threat and protection classes	321
6.5.2.1	General.....	321
6.5.2.2	Handguns	322
6.5.2.3	Long weapons	323
6.5.3	Threat probability.....	324
6.5.3.1	Factors making up threat probability	324
6.5.3.2	Availability and frequency.....	324
6.5.3.3	Threat probability for handguns.....	325
6.5.3.4	Threat probability for rifles.....	326
6.5.4	Protection probability.....	326
6.5.4.1	Perforation probability of ballistic protection.....	326
6.5.4.2	Protection probability.....	328
6.5.5	Testing ballistic protection.....	330
6.5.5.1	General.....	330
6.5.5.2	Testing for non-perforation.....	332
6.5.5.3	Determining the distribution parameters	334
6.5.6	Assessing the potential effect behind the protection.....	336

7 Ricochets	339
7.1 Introduction	339
7.1.1 Preliminary remarks	339
7.1.2 Terminology	339
7.2 Collision theory	340
7.2.1 Types of collision	340
7.2.2 Centric, straight collision	341
7.2.3 Centric, oblique collision	343
7.2.4 Eccentric, straight collision	344
7.2.5 Eccentric, oblique collision	346
7.2.6 Special cases	347
7.3 The phenomenology of ricochets	349
7.3.1 Definitions and symbols	349
7.3.2 Parameters influencing ricochet behaviour	351
7.3.3 Typical ricochet modes	352
7.3.4 Projectiles striking a hard surface at 90°	353
7.4 The projectile as a point mass	354
7.4.1 Heavy targets	354
7.4.1.1 Preliminary remarks	354
7.4.1.2 Ricochet theory	354
7.4.1.3 Curves of ricochet functions. Approximations.	357
7.4.2 Lightweight targets	358
7.4.2.1 General	358
7.4.2.2 Maximum angle of deflection	359
7.4.2.3 Velocity and energy	360
7.4.2.4 Deflection of bullets by stalks and twigs	360
7.4.2.5 Raindrops	361
7.5 The projectile as a rigid body	363
7.5.1 General	363
7.5.2 Position of the shock normal for different bullet shapes	363
7.5.2.1 Parameters	363
7.5.2.2 Elliptical round nose bullets	364
7.5.2.3 Parabolic round nose bullets	364
7.5.2.4 Pointed bullets	365
7.5.2.5 Cylindrical, coned and flat nose bullets	365
7.5.3 The torque shock acting on the projectile	366
7.5.4 When does a ricochet fly stable?	368
7.5.5 Proper motion and flight attitude of ricochet	369
7.5.5.1 Proper motion	369
7.5.5.2 Flight attitude and stability	371
7.6 The trajectory of a ricochet	372

7.6.1	Sectional density and drag coefficient	372
7.6.2	Maximum range	373
7.7	Further ricochet theories.....	374
7.7.1	SELLIER's theory	374
7.7.2	JAUHARI's theory.....	374
7.7.3	BIRKHOFF's theory for water surfaces.....	375
8	Special applications of ballistics.....	377
8.1	Introduction	377
8.2	Forensic applications (<i>Co-author: Dr Fabiano RIVA</i>).....	378
8.2.1	Trajectory reconstruction	378
8.2.1.1	Short and long trajectories	378
8.2.1.2	Data from the scene of the incident	378
8.2.1.3	Obtaining further data	380
8.2.1.4	Visualization	382
8.2.2	Reconstructing the trajectory of an unstable projectile.....	383
8.2.2.1	Causes of instability.....	383
8.2.2.2	Sectional density and drag coefficient	385
8.2.2.3	Reconstruction	386
8.2.3	Case studies	386
8.2.4	Ballistics in bloodstain analysis	391
8.2.4.1	The problem.....	391
8.2.4.2	The maximum velocity of a drop of blood	392
8.2.4.3	Application.....	393
8.2.4.4	Case studies.....	394
8.3	Safety on shooting ranges.....	395
8.3.1	Safety and dangerousity	395
8.3.2	Maximum range	396
8.3.3	Rounds that fall short of the target.....	397
8.3.4	Rebounds.....	398
